## Introduction

This report filed on Form 6-K contains certain information about Credit Suisse AG to be incorporated by reference in the Registration Statement on Form F-3 (file no. 333-158199). Credit Suisse Group AG's financial release for the first quarter of 2011 (Credit Suisse Financial Release 1Q11) is attached as an exhibit to this Form 6-K and was filed with the US Securities and Exchange Commission (SEC) on April 27, 2011. The Bank is incorporating by reference the Credit Suisse Financial Release 1Q11 (except for the sections entitled "Dear shareholders" and "Investor information"). On or about May 10, 2011, Credit Suisse will publish and file with the SEC the Financial Report 1Q11, which will include additional disclosures on fair value of financial instruments, loans, allowance for loan losses and credit quality, derivatives and hedging activities, investment securities, guarantees and commitments, assets pledged or assigned, and transfers of financial assets and variable interest entities.

Unless the context otherwise requires, reference herein to "Credit Suisse Group", "Credit Suisse", "the Group", "we", "us" and "our" mean Credit Suisse Group AG and its consolidated subsidiaries and the term "the Bank" means Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

The Bank, a Swiss bank and joint stock corporation established under Swiss law, is a wholly-owned subsidiary of the Group. The Bank's registered head office is in Zurich, and it has additional executive offices and principal branches in London, New York, Hong Kong, Singapore and Tokyo.

References herein to "CHF" are to Swiss francs.

The Credit Suisse Financial Release 1Q11 contains information for the three months ended March 31, 2011. The Group's independent registered public accounting firm has not completed its review of the condensed consolidated financial statements (unaudited) for the three months ended March 31, 2011 and the Group has not finalized its Financial Report for the period. Accordingly, such financial information is subject to completion of quarter-end procedures which may result in changes to that information.

## Forward-Looking Statements

This Form 6-K and the information incorporated by reference in this Form 6-K include statements that constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act. In addition, in the future the Group, the Bank and others on their behalf may make statements that constitute forward-looking statements.

When evaluating forward-looking statements, you should carefully consider the cautionary statement regarding forward-looking information, the risk factors and other information set forth in the Group's and the Bank's annual report on Form 20-F for the year ended December 31, 2010 (the Credit Suisse 2010 20-F), and subsequent annual reports on Form 20-F filed by the Group and the Bank with the SEC and the Group's and the Bank's reports on Form 6-K furnished to or filed with the SEC, and other uncertainties and events.

# Operating and financial review and prospects

Except where noted, the business of the Bank is substantially the same as the business of the Group, and substantially all of the Bank's operations are conducted through the Private Banking, Investment Banking and Asset Management segments. These segment results are included in Core Results. Certain other assets, liabilities and results of operations are managed as part of the activities of the three segments, however, since they are legally owned by the Group, they are not included in the Bank's consolidated financial statements. These relate principally to the activities of Clariden Leu, Neue Aargauer Bank and BANK-now, which are managed as part of Private Banking. Core Results also includes certain Group corporate center activities that are not applicable to the Bank.

These operations and activities vary from period to period and give rise to differences between the Bank's consolidated assets, liabilities, revenues and expenses, including pensions and taxes, and those of the Group.

## Differences between the Group and the Bank businesses

Entity	Principal business activity
Clariden Leu	Banking and securities
Neue Aargauer Bank	Banking (in the Swiss canton of Aargau)
BANK-now	Private credit and car leasing (in Switzerland)
Financing vehicles of the Group	Special purpose vehicles for various funding activities of the Group, including for purposes of raising consolidated capital

Brady W. Dougan, Chief Executive Officer (left) and Hans-Ulrich Doerig, Chairman of the Board of Directors.

## Dear shareholders

We achieved underlying\* pre-tax income of CHF 2.2 billion, net income of CHF 1.6 billion and return on equity of 18.8%. Including fair value losses of CHF 617 million (CHF 467 million after tax) on own debt and stand-alone derivatives relating to own funding liabilities, we achieved a net income attributable to shareholders of CHF 1.1 billion, return on equity of 13.4%, and a tier 1 ratio of 18.2%. This provides further evidence that our business model generates stable, high quality earnings. In a quarter marked by significant market uncertainty we have maintained our strong momentum with clients, gaining market share and generating CHF 19.1 billion net new assets.

### Performance of our businesses

Private Banking delivered pre-tax income of CHF 855 million and attracted net new assets of CHF 18.0 billion. We are particularly pleased that our longstanding efforts to build a multi-shore business with a comprehensive advisory process in

Wealth Management has contributed to an excellent result with CHF 15.7 billion in net new assets. In Switzerland, our Corporate & Institutional Clients business, which is an important provider of financing and services to the Swiss economy, achieved another strong result and maintained a high pre-tax income margin.

Investment Banking recorded pre-tax income of CHF 1,343 million with net revenues of CHF 4,929 million as we continue to win market share with strong fixed income results and solid results in equity sales and trading as well as a solid performance in underwriting and advisory. The environment for fixed income trading improved in the first quarter and we are particularly pleased that the investment in our franchise has begun to show an impact on results. We also maintained our leading position in equity sales and trading. Our pipeline in underwriting and advisory remains strong and we are well positioned to capture increases in issuance levels and M&A activity.

Asset Management reported pre-tax income of CHF 172 million with net new assets of CHF 4.5 billion in the first quarter. We continue to successfully execute our strategy including our acquisitions such as Hedging-Griffo in Brazil and our stake in York Capital. There has been an improvement in investment performance, performance fees have increased and we believe there is further upside potential. We are also pleased with our steady quarterly net asset inflows.

**Positioned to succeed in the new industry landscape**

In light of the financial crisis in 2008, we are convinced that global banks need to embrace a stronger capital regime and with Basel III we have the framework to allow for consistent capital treatment. In 2010 the Swiss Expert Commission made proposals on how the Swiss large banks could address the too-big-to-fail issue. We support the Expert Commission's proposals and believe they can be implemented without a large impact on our competitive position under Basel III. We have already raised more than 70% of the high-trigger contingent capital required under the new regime and are encouraged that measures proposed by regulators outside of Switzerland suggest that progress toward a more level playing field is being made.

**Outlook**

We expect the market environment to remain constructive. We also expect clients to remain active with an increased appetite for higher return assets and comprehensive advisory services. However, the macroeconomic recovery continues to be gradual and impacted by external and market events. Nonetheless, we have substantial momentum across all of our client-based businesses, and we remain well prepared to continue to capitalize on our improved market position.

Yours sincerely

Hans-Ulrich Doerig  
April 2011

Brady W. Dougan

\* Excluding fair value losses of CHF 617 million (CHF 467 million after tax) on own debt and stand-alone derivatives relating to own funding liabilities.

## Financial Release

# 1Q 11

On or about May 10, 2011, we will publish and file with the SEC our Financial Report 1Q11, which will include additional disclosures on:

- fair value of financial instruments;
- loans, allowance for loan losses and credit quality;
- derivatives and hedging activities;
- investment securities;
- guarantees and commitments;
- assets pledged or assigned; and
- transfers of financial assets and variable interest entities.

For purposes of this report, unless the context otherwise requires, the terms "Credit Suisse," "the Group," "we," "us" and "our" mean Credit Suisse Group AG and its consolidated subsidiaries. The business of Credit Suisse AG, the Swiss bank subsidiary of the Group, is substantially similar to the Group, and we use these terms to refer to both when the subject is the same or substantially similar. We use the term "the Bank" when we are only referring to Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

In various tables, use of "-" indicates not meaningful or not applicable.

# Credit Suisse at a glance

## Credit Suisse

As one of the world's leading financial services providers, we are committed to delivering our combined financial experience and expertise to corporate, institutional and government clients and to high-net-worth individuals worldwide, as well as to private clients in Switzerland. Founded in 1856, we have a truly global reach today, with operations in over 50 countries and 50,100 employees from approximately 100 different nations. This worldwide reach enables us to generate a geographically balanced stream of revenues and net new assets and allows us to capture growth opportunities wherever they are. We serve our diverse clients through our three divisions, which cooperate closely to provide holistic financial solutions based on innovative products and specially tailored advice.

## Private Banking

Private Banking offers comprehensive advice and a wide range of financial solutions to private, corporate and institutional clients. The Private Banking division comprises the Wealth Management Clients and Corporate & Institutional Clients businesses. In Wealth Management Clients we serve ultra-high-net-worth and high-net-worth individuals around the globe and private clients in Switzerland. Our Corporate & Institutional Clients business serves the needs of corporations and institutional clients, mainly in Switzerland.

## Investment Banking

Investment Banking provides a broad range of financial products and services, including global securities sales, trading and execution, prime brokerage and capital raising services, corporate advisory and comprehensive investment research, with a focus on businesses that are client-driven, flow-based and capital-efficient. Clients include corporations, governments, institutional investors, including hedge funds, and private individuals around the world. Credit Suisse delivers its investment banking capabilities via regional and local teams based in major global financial centers. Strongly anchored in Credit Suisse's integrated model, Investment Banking works closely with the Private Banking and Asset Management divisions to provide clients with customized financial solutions.

## Asset Management

Asset Management offers a wide range of investment products and solutions across asset classes, for all investment styles. The division manages global and regional portfolios, separate accounts, mutual funds and other investment vehicles for governments, institutions, corporations and individuals worldwide. Asset Management focuses on becoming a global leader in multi-asset class solutions as well as in alternative investments. To deliver the bank's best investment performance, Asset Management operates as a global integrated network in close collaboration with the Private Banking and Investment Banking divisions.

6 Operating environment

9 Credit Suisse

11 Core Results

17 Key performance indicators

# Operating environment

The global economic recovery accelerated in 1Q11 despite political tensions in the Middle East and North Africa and the natural disaster in Japan. The European Central Bank and the Bank of England indicated that interest rates may be raised sooner than previously anticipated given increased inflation indicators in Europe. Equity markets in developed countries outperformed most emerging market indices. European currencies appreciated in 1Q11 against the US dollar, with the Swiss franc reaching new highs.

## Economic environment

The global economy showed further signs of recovery in 1Q11, driven by manufacturing gains across most major economies and decreasing levels of unemployment in the US and Europe. Recovery was tempered by uncertainty and volatility caused by political unrest in the Middle East and North Africa, ongoing sovereign debt concerns in Europe, tightening monetary policies given inflation concerns in some regions and potential economic disruptions resulting from the natural disaster in Japan.

The US Federal Reserve (Fed) continued to execute its plan to purchase USD 600 billion of long-term treasuries by the end of 2Q11 in an effort to stimulate the economic recovery and promote job creation. European leaders agreed in principle to increase the lending capacity of the European Finan-

cial Stability Facility from EUR 250 billion to EUR 440 billion and lower funding costs for loans. The interest rate on loans previously made to Greece was lowered by 100 basis points, and their maturities were extended. No funding agreement was reached with Ireland given its refusal to adopt a common corporate tax base as proposed by other European governments. The resignation of the Portuguese Prime Minister after parliament rejected additional austerity measures resulted in higher yields on Portugal's sovereign bonds.

Global inflation increased, largely due to higher energy prices; there were also signs that core inflation was picking up. As a result, central banks in many regions increased interest rates or were expected to do so. The Bank of England signaled a potential interest rate increase in the near term. During the quarter the European Central Bank (ECB) also indicated an imminent interest rate increase. Central banks in

## Yield curves

Bond yields increased in major market in 1Q11, mainly due to increased inflation expectations and expected rate hikes by the ECB.

## Equity markets

Equity markets had a mixed quarter. Developed markets outperformed emerging markets in 1Q11.

### Performance region

many emerging markets continued tightening monetary policies. The People's Bank of China raised its reserve requirement ratio and policy rates further. However, the Fed reiterated that the federal funds rate will remain at its exceptionally low level for an extended period of time.

In Switzerland, the favorable economic trend continued, driven by growth in almost all sectors, though concerns regarding the potential impact of the appreciation of the Swiss franc on the export industry remained. In Switzerland, inflation

## Credit spreads

Credit spreads widened in March, reversing some of the prior positive performance.

remained low at 1% year on year, primarily reflecting the impact of the strong exchange rate. Unemployment remained above the levels seen before the financial crisis, but decreased during the quarter. Corporate insolvencies were stable, while the number of start-up companies increased.

Equity markets had a mixed quarter, with major indices in the US and Europe reporting positive returns, but equity markets in most emerging markets and Japan ended the quarter with losses. Swiss equities were down 1%. Market volatility, as indicated by the CBOE Volatility Index (VIX), was stable until the natural disaster in Japan led to a surge in volatility (refer to the charts "Equity markets").

Despite safe-haven flows following the geopolitical events in the Middle East and North Africa and the natural disaster in Japan, positive macroeconomic data led to a rise in major benchmark yields in 1Q11 (refer to the charts "Yield curves"). Front-end yields in Europe increased due to the expected rate increase by the ECB in April. Fixed income investors were increasingly contemplating the impact of central bank exit strategies in developed markets. In credit markets, lower-rated issuers continued to outperform in 1Q11, supported by a continued decrease in default rates and easy access to capital markets. The Swiss franc yield curve moved up for all maturities in 1Q11. Front-end yields increased due to expected rate hikes by the Swiss National Bank (SNB). The long-end of the curve normalized due to reduced demand.

The Swiss franc stabilized at strong levels versus the euro, while reaching new highs against the US dollar due to narrow interest rate spreads between the US and Switzerland and the Swiss franc's safe-haven status. European currencies appreci-

ated in 1Q11 against the US dollar, mainly driven by market expectations of earlier monetary tightening in Europe compared to the US. The yen was volatile due to increased risk aversion after the natural disaster, but joint currency intervention by the Bank of Japan and other G-7 central banks provided a floor for the US dollar against the yen.

Commodity prices increased in all major sectors, with energy being the strongest. Oil prices rose sharply, impacted by escalating political tensions in the Middle East and North Africa. Gold prices reached new all-time highs, above USD 1,400 per ounce during 1Q11, but this trend weakened as some market participants took profits.

### Sector environment

Banks performed in line with the broader market in 1Q11, driven by easing sovereign concerns (refer to the charts "Equity markets"). The increased risk premium driven by political tensions in the Middle East and North Africa and economic uncertainties after the Japanese natural disaster resulted in a sector price correction in March 2011.

Further information on the 2011 European bank stress test criteria was published, providing increased confidence in transparency for the sector in the region, though the regulatory environments in Europe and the US continued to evolve and uncertainty regarding final outcomes remained.

Overall funding availability for European banks improved markedly in 1Q11, in line with easing sovereign concerns. Nevertheless, the dependency of the Portuguese, Irish and Greek banks on ECB lending support increased during 1Q11.

The **wealth management** sector was supported by improved equity and fixed income trading volumes. Inflationary concerns driven by the surge in commodity prices increased

demand for products with underlying real assets, such as real estate funds and inflation hedges. The strength of the Swiss franc continued to have an adverse foreign exchange impact on the results and assets under management at Swiss institutions. Retail banking revenues in Switzerland decreased as a result of ongoing competition and margin pressure in the mortgage business, while credit quality remained stable.

In the **investment banking** sector, underwriting and advisory activity was mixed during the quarter. Global debt underwriting activity increased from 1Q10, and equity underwriting was higher compared to 1Q10, but considerably lower compared to the robust 4Q10. Mergers and acquisitions (M&A) activity reported higher results than in 1Q10, mainly driven by improved market confidence and cash rich companies. The global fee pool was up 19% compared to 1Q10. North America continued to be the leading contributor with almost half of the market share. Global exchange volumes were higher than in 1Q10 for equity markets. Cash equity volumes increased in the US and Europe. The equity derivatives market showed mixed trends in 1Q11, with lower volumes in Europe, but higher volumes in the US. US fixed income volumes increased 11%, driven primarily by US treasuries. Cost pressures in the sector remained high, with many institutions implementing further cost cutting initiatives.

In the **asset management** sector, the Dow Jones Credit Suisse Hedge Fund Index was up 2% in 1Q11, underperforming world equities. The hedge fund industry saw gains in event driven and long-short equities strategies and losses in managed futures. Global private equity fundraising remained challenging, however, the number and value of funds in the market continued to rise. Despite global events, equity funds posted strong returns. There were inflows in equity and bond funds and outflows from money market funds during the quarter.

# Credit Suisse

In 1Q11, we recorded net income attributable to shareholders of CHF 1,139 million. Diluted earnings per share were CHF 0.90. Return on equity attributable to shareholders was 13.4%. Our capital position remained strong with a BIS tier 1 ratio of 18.2%.

## Credit Suisse reporting structure and Core Results

Credit Suisse results include revenues and expenses from the consolidation of certain private equity funds and other entities in which we have noncontrolling interests without significant economic interest (SEI) in such revenues and expenses. Core Results include the results of our three segments and the Corporate Center and discontinued operations, but do not include noncontrolling interests without SEI.

# Core Results

In 1Q11, we recorded net income attributable to shareholders of CHF 1,139 million. Private Banking had strong net new assets, with Wealth Management Clients reporting CHF 15.7 billion net new assets, achieving an annualized growth rate of 7.8%. Private Banking had good transaction-based revenues, reflecting increased client activity, while recurring revenues continued to reflect the risk-averse asset mix and ongoing low interest rate environment. Investment Banking net revenues reflected strong fixed income and solid equity sales and trading results. Underwriting and advisory results were solid, in line with lower industry-wide issuance and activity levels. Asset Management had improved fee-based revenues compared to 1Q10, continued its positive trend in net new assets and had investment-related gains of CHF 160 million.

<sup>1</sup> Based on amounts attributable to shareholders.

In managing the business, revenues are evaluated in the aggregate, including an assessment of trading gains and losses and the related interest income and expense from financing and hedging positions. For this reason, individual revenue categories may not be indicative of performance.

Certain reclassifications have been made to prior periods to conform to the current presentation.

## Results overview

In 1Q11, we recorded net income attributable to shareholders of CHF 1,139 million, down 45% compared to 1Q10. Net revenues were CHF 7,813 million, down 13%, and total operating expenses were CHF 6,195 million, slightly higher compared to 1Q10. Revenues were adversely impacted and expenses were favorably impacted by the weakening of the average rate of the euro and US dollar against the Swiss franc compared to 1Q10. Our 1Q11 results included fair value losses of CHF 309 million on Credit Suisse vanilla debt and CHF 308 million of fair value losses on stand-alone derivatives related to certain of our funding liabilities, substantially all in Corporate Center.

In **Private Banking**, net revenues of CHF 2,896 million were stable compared to 1Q10, as lower recurring revenues were offset by higher transaction-based revenues. In an ongoing low interest rate environment, net interest income decreased 3%, with lower deposit margins on lower average volumes and higher loan margins on slightly higher average volumes. Recurring commissions and fees were down 5%, mainly from lower investment product management fees, primarily reflecting the positive impact in 1Q10 from a change in estimate for prior-year fee accruals. This decline was partially offset by higher investment account and services fees. Transaction-based revenues increased 13%, primarily due to higher brokerage and product issuing fees, including stronger demand for structured products, reflecting increased client activity, and higher foreign exchange income from client transactions. Overall, assets under management continued to reflect a risk-adverse asset mix, with investments in less complex, lower-margin products, also within managed investment products, and a significant portion of assets in cash, money market and fixed income products. Results in 1Q11 were impacted by the weakening of the average exchange rate of the US dollar and the euro against the Swiss franc compared to 1Q10.

## Impact from movements in spreads

Our Core Results revenues are impacted by changes in credit spreads on Credit Suisse vanilla debt carried at fair value. For segment reporting purposes, the cumulative fair value gains of CHF 1.5 billion on Credit Suisse vanilla debt as of the opening 1Q10 balance sheet are charged to the segments on a straight-line amortization basis, and the difference between this amortization and the fair valuation on this Credit Suisse debt from changes in credit spreads is included in the Corporate Center. For further information, refer to *II – Operating and financial review – Core Results – Accounting changes adopted in the first quarter 2010 in the Credit Suisse Annual Report 2010*. Our Core Results are also impacted by fair valuation gains/(losses) on stand-alone derivatives relating to certain of our funding liabilities. These fair valuation gains/(losses) on the stand-alone derivatives are recorded in the Corporate Center, reflect the basis volatility of cross-currency swaps and yield curve volatility and, over the life of the derivatives, will result in no net gains/(losses). Regulatory capital excludes cumulative fair value gains/(losses) related to own vanilla debt and structured notes, net of tax. For further information, refer to *IV – Treasury, risk, balance sheet and off-balance sheet – Treasury management*.

In **Investment Banking**, net revenues of CHF 4,929 million were down 6% from 1Q10. Results in 1Q11 were impacted by the weakening of the US dollar against the Swiss franc, which adversely impacted revenues and favorably impacted expenses. In US dollars, net revenues were 8% higher and pre-tax income was 15% lower compared to 1Q10. Fixed income sales and trading results were lower than 1Q10 due to the foreign exchange translation impact. Fixed income sales and trading results in 1Q11 were driven by revenues in securitized products, primarily non-agency residential mortgage-backed securities (RMBS), global rates, leveraged finance, emerging markets, corporate lending, high grade trading and foreign exchange. Client flows increased significantly in 1Q11 across most of fixed income sales and trading

businesses, as investments in distribution capabilities and flow sales force enabled us to capitalize on increased market volumes. Equity sales and trading results were weaker compared to 1Q10 due to the foreign exchange translation impact. Equity sales and trading results were driven by revenues in cash equities, prime services, derivatives and equity arbitrage trading. Underwriting and advisory results were stronger compared to 1Q10. Debt underwriting revenues were higher, primarily due to stronger leveraged finance capital markets activity and an improvement in high yield market share. Equity underwriting revenues were lower due to the foreign exchange translation impact. Advisory revenues were stronger, in line with industry-wide M&A activity levels.

A significant portion of our business requires inter-regional coordination in order to facilitate the needs of our clients. The methodology for allocating our results by region is dependent on management judgment. For Private Banking, results are allocated based on the management reporting structure of our relationship managers and the region where the transaction is recorded. For Investment Banking, trading results are allocated based on where the risk is primarily managed and fee-based results are allocated where the client is domiciled. For Asset Management, results are allocated based on the location of the investment advisors and sales teams.

In **Asset Management**, net revenues of CHF 591 million were down 6% from 1Q10. Net revenues before investment-related gains and securities purchased from money market funds were CHF 431 million, up 9%, reflecting improved results in diversified investments, alternative investments and traditional investments. Fee-based revenues increased 2% compared to 1Q10. Asset management fees of CHF 327 million were down 9%, reflecting the end of our transitional fund administration services agreement with Aberdeen, the spin-off and sale of non-core businesses in 2010 and the foreign exchange translation impact. Lower management fees in alternative investments reflected decreases in certain private equity funds following realizations, fund of hedge funds redemptions, the impact from the spin-off and the sale of non-core businesses and the foreign exchange translation impact. The decrease was partially offset by growth in assets under management in emerging markets, single manager hedge funds, index strategies and exchange-traded funds (ETFs). Asset management fees in traditional investments benefited from net asset inflows, mainly in higher margin products in equities and multi-asset class solutions. Average assets under management increased 2.2% compared to 1Q10, reflecting net new assets and positive market performance, partially offset by adverse foreign exchange-related movements. Placement, transaction and other fees were 25% higher, primarily reflecting higher placement fees. Performance fees and carried interest were up 113%, mainly due to carried interest on real-

ized private equity gains. Equity participations income increased 78%, primarily reflecting higher income in single manager hedge funds, including our investment in York Capital Management (York) which closed in 4Q10, and in diversified strategies, including Asset Management Finance (AMF). Investment-related gains were CHF 160 million, up CHF 25% compared with 1Q10, with realized and unrealized gains in private equity investments in the commodities and industrial sectors and in credit-related investments. Investment-related gains reflected the adverse foreign exchange translation impact. 1Q10 included equity participation losses, reflecting the reduction in our ownership interest in Aberdeen due to an issuance of shares by Aberdeen. Other revenues decreased CHF 109 million, primarily reflecting gains of CHF 107 million in 1Q10 from securities purchased from money market funds.

For further information on Private Banking, Investment Banking and Asset Management, refer to *II – Results by division*.

**Corporate Center** includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses and revenues that have not been allocated to the segments. In addition, the Corporate Center includes consolidation and elimination adjustments required to eliminate intercompany revenues and expenses. Corporate Center loss before taxes was CHF 745 million. The loss included fair value losses on our long-term vanilla debt, consisting of CHF 254 million on own debt and CHF 308 mil-

lion on stand-alone derivatives. The fair value losses on own debt reflected the narrowing of credit spreads and the increased fair value of outstanding hybrid debt instruments due to the greater perceived likelihood of redemption at their first call date following the issuance of Buffer Capital Notes (BCNs) during the quarter. The fair value losses on stand-alone derivatives reflected the basis volatility of cross-currency swaps and yield curve volatility. Revenues included a CHF 47 million impairment in an equity method investment. Revenues and compensation and benefits also included reclassifications relating to the Partner Asset Facility (PAF), as PAF gains of CHF 51 million and offsetting compensation expense were included in Investment Banking trading revenues. General and administrative expenses included charitable contributions in lieu of a portion of discretionary performance-related compensation, for certain managing directors, for 2010.

**Provision for credit losses** were net releases of CHF 7 million in 1Q11, with net releases of CHF 19 million in Investment Banking and net provisions of CHF 12 million in Private Banking.

**Total operating expenses** of CHF 6,195 million were up 2% compared to 1Q10, reflecting 3% higher compensation and benefits, offset in part by 2% lower general and administrative expenses. The increase in compensation and benefits was mainly due to an increase in social security expenses related to prior year share awards, higher performance-related compensation accruals and higher deferred compensation from prior year awards. The decrease in general and administrative expenses reflected a decline in expense provisions and occupancy expenses, partially offset by higher professional services. Operating expenses in 1Q11 were favorably impacted by the weakening of the average rate of the US dollar and the euro against the Swiss franc compared to 1Q10.

The **Core Results effective tax rate** was 28.6% in 1Q11, compared to 31.0% in 4Q10. The 1Q11 effective tax rate was mainly influenced by the geographical mix of results but also reflected a positive impact from the re-measurement of deferred tax assets in the US. Overall, net deferred tax assets decreased CHF 824 million to CHF 8,181 million as of the end of 1Q11. For further information, refer to *Note 20 – Tax in V – Condensed consolidated financial statements – unaudited*.

**Assets under management** were CHF 1,282.4 billion as of the end of 1Q11, slightly higher compared to the end of 4Q10, reflecting net new assets and positive market performance. Compared to the end of 1Q10, assets under management were stable. Net new assets in both Private Banking and Asset Management, and positive market performance were offset by adverse foreign exchange-related movements.

## Regulatory proposals and developments

Government leaders and regulators continued to focus on reform of the financial services industry, including capital, leverage and liquidity requirements, changes in compensation practices and systemic risk. For information on the liquidity principles agreed with the Swiss Financial Market Supervisory Authority (FINMA), the liquidity and capital standards under the Basel Committee on Banking Supervision (BCBS) Basel III framework, the report of the Swiss Expert Commission on “Too Big to Fail” issues relating to big banks, and the revisions to the Basel II market risk framework (Basel II.5), refer to *IV – Treasury, risk, balance sheet and off-balance sheet – Treasury management – Regulatory developments and proposals*, and for information on other regulatory proposals and developments, refer to *I – Information on the company – Regulation and supervision in the Credit Suisse Annual Report 2010*.

## Compensation and benefits

Compensation and benefits for a given year reflect the strength and breadth of the business results and staffing levels and include fixed components, such as salaries, benefits and the amortization of share-based and other deferred compensation from prior-year awards, and a discretionary variable component. The variable component reflects the performance-based variable compensation for the current year. The portion of the performance-based compensation for the current year deferred through share-based and other awards is expensed in future periods and is subject to vesting and other conditions.

Our shareholders’ equity reflects the effect of share-based compensation, including the impact of related share repurchases and other hedging activities. Equity is generally unaffected by the granting and vesting of share-based awards, including through the issuance of shares from approved conditional capital. Share-based compensation expense (which is generally based on fair value at the time of grant) reduces equity, however the recognition of the obligation to deliver the shares increases equity by a corresponding amount. When Credit Suisse purchases shares from the market to meet its obligation to employees, these purchased treasury shares reduce equity by the amount of the purchase price. Treasury shares are managed in aggregate and are not allocated to specific obligations under any particular share-based compensation program. Shareholders’ equity also includes, as additional paid-in capital, the excess tax benefits/charges that arise at settlement of share-based awards. For further information, refer to the *Consolidated statements of changes in equity (unaudited)* and *Note 21 – Employee deferred compensation in*

*V – Condensed consolidated financial statements – unaudited and Note 26 – Tax – Tax benefits associated with share-based compensation in V – Consolidated Financial Statements – Credit Suisse Group in the Credit Suisse Annual Report 2010.*

## Funding

We centrally manage our funding activities. New securities for funding and capital purposes are issued primarily by the Bank. The Bank lends funds to our operating subsidiaries and affiliates on both a senior and subordinated basis, as needed, the latter typically to meet capital requirements, or as desired by management to capitalize on opportunities. Capital is distributed to the segments considering factors such as regulatory capital requirements, utilized economic capital and the historic and future potential return on capital.

Transfer pricing, using market rates, is used to record net revenues and expense in each of the segments for this capital and funding. Our funds transfer pricing system is designed to allocate to our businesses funding costs in a way that incentivizes their efficient use of funding. Our funds transfer pricing system is an essential tool that allocates to the businesses the short-term and long-term costs of funding their balance sheet and the costs associated with funding liquidity and balance sheet items, such as goodwill, which are beyond the control of individual businesses. This is of greater importance in a stressed capital markets environment where raising funds is more challenging and expensive. Under this system, our businesses are also credited to the extent they provide long-term stable funding.

## Fair valuations

Fair value can be a relevant measurement for financial instruments when it aligns the accounting for these instruments with how we manage our business. The levels of the fair value hierarchy as defined by the relevant accounting guidance are not a measurement of economic risk, but rather an indication of the observability of prices or valuation inputs. For further information, refer to *Note 1 – Summary of significant accounting policies and Note 26 – Financial instruments in V – Condensed consolidated financial statements – unaudited*. The Financial Report 1Q11, including additional disclosures on fair value of financial instruments, will be published on our website and filed with the US Securities and Exchange Commission (SEC) on or about May 10, 2011.

## Personnel

Headcount at the end of 1Q11 was 50,100, stable compared to 4Q10. Headcount at the end of 1Q11 was up 4% from 1Q10, reflecting increases in Private Banking, with investments, including IT, in client-facing businesses, and in Investment Banking, mainly fixed income and underwriting and advisory businesses.

## Number of employees by division

# Key performance indicators

To benchmark our achievements, we have defined a set of key performance indicators for which we have targets to be achieved over a three to five year period across market cycles.

Our key performance indicators (KPIs) are targets to be achieved over a three to five year period across market cycles. As such, year-to-date results may be more meaningful than individual quarterly results. Our KPIs are assessed annually as part of our normal planning process. In 1Q11, we adjusted our KPIs and the KPIs for Private Banking and Asset Management to reflect our strategic plan, the regulatory environment and the market cycle.

## Growth

We target collaboration revenues of 18% to 20% of net revenues. Collaboration revenues were 14.1% of net revenues for 1Q11.

For net new assets, we target a growth rate above 6%. In 1Q11, we recorded an annualized net new asset growth rate of 6.1% and a rolling four-quarter average growth rate of 4.9%.

## Efficiency and performance

For total shareholder return, we target superior share price appreciation plus dividends compared to our peer group. Our 1Q11 total shareholder return was 3.6%. The 1Q11 average total shareholder return of our peer group was 3.9%.

For return on equity, we target an annualized return on equity above 15%. The annualized return on equity was 13.4% in 1Q11.

We target a pre-tax income margin above 28%. Our pre-tax income margin was 20.8% for 1Q11.

## Capital

For the Bank for International Settlements (BIS) tier 1 ratio, our capital targets are compliance with the Swiss "Too Big to Fail" and Basel III capital standards. The BIS tier 1 ratio was 18.2% as of the end of 1Q11.

in / end of	Target	1Q11	2010	2009	2008
<b>Growth</b>					
Collaboration revenues (%)	18 - 20% of net revenues	14.1	14.4	15.5	43.8

<sup>1</sup> Source: Bloomberg. Total shareholder return is calculated as equal to the appreciation or depreciation of a particular share, plus any dividends, over a given period, expressed as a percentage of the share's value at the beginning of the period. <sup>2</sup> The peer group for this comparison comprises Bank of America, Barclays, BNP Paribas, Citigroup, Deutsche Bank, HSBC, JPMorgan Chase and UBS. The total shareholder return of this peer group is calculated as a simple, unweighted average of the return reported by Bloomberg for each of the members of the peer group.

# Private Banking

In 1Q11, we reported net revenues of CHF 2,896 million and income before taxes of CHF 855 million. Net new assets of CHF 18.0 billion were very strong, both in our international businesses and in Switzerland. Wealth Management Clients contributed net new assets of CHF 15.7 billion, achieving an annualized growth rate of 7.8%.

## Results overview

Income before taxes of CHF 855 million decreased 4% and net revenues of CHF 2,896 million were stable compared to 1Q10, as lower recurring revenues were offset by higher transaction-based revenues. In an ongoing low interest rate environment, net interest income decreased 3%, with lower deposit margins on lower average volumes and higher loan margins on slightly higher average volumes. Recurring commissions and fees were down 5%, mainly from lower investment product management fees, primarily reflecting the positive impact in 1Q10 from a change in estimate for prior-year fee accruals. This decline was partially offset by higher investment account and services fees. Transaction-based revenues increased 13%, primarily due to higher brokerage and product issuing fees, including stronger demand for structured prod-

ucts, reflecting increased client activity, and higher foreign exchange income from client transactions. Overall, assets under management continued to reflect a risk-averse asset mix, with investments in less complex, lower-margin products, also within managed investment products, and a significant portion of assets in cash, money market and fixed income products.

Results in 1Q11 were impacted by the weakening of the average exchange rate of the US dollar and the euro against the Swiss franc compared to 1Q10, adversely impacting revenues and assets under management and favorably impacting expenses. The adverse impact on net revenues and income before taxes was approximately CHF 180 million and CHF 130 million, respectively, in Wealth Management Clients. For further information on foreign currency translation rates, refer to *VI – Investor information*.

We recorded provisions for credit losses of CHF 12 million, all in Wealth Management Clients.

Total operating expenses of CHF 2,029 million were 2% higher compared to 1Q10, driven by slightly higher compensation and benefits and higher commission expenses. The increase in compensation and benefits was mainly driven by higher salaries and benefits, reflecting increased headcount, partially offset by lower discretionary performance-related compensation accruals and deferred compensation from prior-year awards. General and administrative expenses decreased slightly.

Compared to 4Q10, income before taxes increased 4%. Net revenues were stable, as a lower net interest income was offset by higher transaction-based revenues. The 4% decline in net interest income reflected slightly lower deposit margins on slightly lower average volumes and slightly lower loan margins on stable average volumes. The slight decline in deposit revenues included the impact from lower volumes related to securities lending and borrowing. Recurring commissions and fees were stable, as lower investment product management fees were offset by higher investment account and services fees and banking services fees. The decline in investment product management fees reflected semi-annual performance fees from Hedging-Griffo in 4Q10. Transaction-based revenues increased 6%, reflecting higher brokerage and product issuing fees, partially offset by lower revenues from integrated solutions. Foreign exchange income from client transactions was solid, and stable compared to 4Q10. Total operating expenses decreased 3%, mainly due to a 13% decrease in general and administrative expenses. Compensation and benefits increased slightly.

Assets under management as of the end of 1Q11 amounted to CHF 957.9 billion, 2.7% higher than the end of 4Q10. The increase reflected net new assets and positive market movements. Wealth Management Clients contributed net new assets of CHF 15.7 billion, of which 70% was from international regions, with strong contributions from emerging markets and the ultra-high-net-worth (UHNW) client segment. Corporate & Institutional Clients contributed net new assets of CHF 2.3 billion. Compared to the end of 1Q10, assets under management were up 1.3%, reflecting strong net new assets and positive equity and bond market movements, mostly offset by adverse foreign exchange-related movements, mainly from the weakening of the euro and the US dollar. Average assets under management for Wealth Management Clients were stable compared to 4Q10 and increased 1.3% compared to 1Q10, as strong net new assets, particularly from the UHNW client segment, and positive market movements were offset by adverse foreign exchange-related movements.

## Performance indicators

### Pre-tax income margin (KPI)

Our target over market cycles is a pre-tax income margin above 35%. In 1Q11, the pre-tax income margin was 29.5%, down 1.3 percentage points from 1Q10 and up 1.2 percentage points from 4Q10.

### Net new asset growth for Wealth Management Clients (KPI)

Our target over market cycles is a growth rate over 6%. Our annualized quarterly growth rate was 7.8% in 1Q11. The rolling four-quarter average growth rate was 5.8%.

### Pre-tax income margin

### Net new asset growth for Wealth Management Clients

## Initiatives and achievements

In 1Q11, we continued our long-term strategy of organic growth and strengthened our client focus:

- In collaboration with Asset Management, we expanded our range of ETFs to 58, listing two equity and two money market funds on the SIX Swiss Exchange. We are the largest ETF provider in Switzerland.
- In the Americas, we launched a fund feeder platform that provides access to hedge funds, enabling relationship managers to offer clients a strategic approach to invest in new hedge funds or review an existing hedge fund portfolio to optimize their exposures and expected returns.
- We extended our client offering in private equity through Asia Alternatives Management, offering clients access to a diversified portfolio of leading private equity managers in Asia.
- We hosted the largest ever annual Asian Investment Conference in March, with speakers including political leaders, policy makers, CEOs and leading academics from around the region. The conference is designed to provide international and regional investors with ideas and insights into investment strategies and underscores our commitment to this fast-growing region.
- We were awarded “Best Private Banking Service in the Middle East” by *Banker Middle East* magazine for the strength of our integrated model and for providing comprehensive solutions to private banking clients in the region.
- We were awarded “Best Swiss Global Custodian 2011” for the third time in the last four years by R&M Surveys, an independent research and consultancy firm analyzing customer satisfaction of professional investors.
- Clariden Leu received a Lipper award for its Luxury Goods Equity Fund in the category “Equity Sector Cyclical Consumer Goods and Services” in Germany, Austria and France.

## Results detail

The following provides a comparison of our 1Q11 results versus 1Q10 (YoY) and versus 4Q10 (QoQ).

### Net revenues

Recurring revenues arise from net interest income, recurring commissions and fees, including performance-based fees, related to assets under management and custody assets, as well as fees for general banking products and services. Net interest income includes a term spread credit on stable deposit funding and a term spread charge on loans. Transaction-based

revenues arise primarily from brokerage and product issuing fees, foreign exchange income from client transactions and other transaction-based income.

**YoY: Stable at CHF 2,896 million**

Net interest income decreased 3%, with lower deposit margins on lower average volumes and higher loan margins on slightly higher average volumes. Recurring commissions and fees were down 5%, mainly from lower investment product management fees, primarily reflecting the positive impact in 1Q10 from a change in estimate for prior-year fee accruals. Excluding this impact, investment product management fees were stable, reflecting the ongoing risk-averse asset mix, including a significant proportion of investments in cash, money market and fixed income products. Investment account and services fees increased, mainly from investment advisory services and security account fees. Transaction-based revenues increased 13%, primarily due to higher brokerage and product issuing fees, including higher fees from equities, structured products and interest rate derivatives. The increase in transaction-based revenues also included higher foreign exchange income from clients and higher revenues from integrated solutions.

**QoQ: Stable at CHF 2,896 million**

Lower net interest income reflected slightly lower deposit margins on slightly lower average volumes and slightly lower loan margins on stable average volumes. The slight decline in deposit revenues included the impact from lower volumes related to securities lending and borrowing. Recurring commissions and fees were stable, as lower investment product management fees were offset by higher investment account and services fees and banking services fees. The decline in investment product management fees reflected semi-annual performance fees from Hedging-Griffo in 4Q10. Transaction-based revenues increased 6%, reflecting higher brokerage and product issuing fees, mainly from structured products and interest rate derivatives, partially offset by lower revenues from integrated solutions.

### Provision for credit losses

**YoY: Down from CHF 19 million to CHF 12 million**

New provisions of CHF 41 million and releases of CHF 29 million resulted in net new provision for credit losses of CHF 12 million, all in Wealth Management Clients. A substantial part of the releases were in Corporate & Institutional Clients, while new provisions were recognized in Wealth Management Clients and Corporate & Institutional Clients. The Wealth Management Clients loan portfolio is substantially comprised of residential mortgages in Switzerland and loans collateralized by securities. Our corporate and institutional loan portfolio has

sound quality, relatively low concentrations and is mainly collateralized by mortgages and securities.

**QoQ:** Up from CHF 4 million to CHF 12 million

Provision for credit losses reflected lower releases and new provisions.

## Operating expenses

### Compensation and benefits

**YoY:** Up 3% from CHF 1,183 million to CHF 1,224 million

The increase reflected higher salaries and benefits, driven by headcount increases, and social security expenses on share award deliveries, mostly offset by lower discretionary performance-based compensation accruals and deferred compensation from prior-year awards.

**QoQ:** Up 2% from CHF 1,201 million to CHF 1,224 million

The increase reflected slightly higher deferred compensation from prior-year awards and the social security expenses on share award deliveries, as salaries and benefits and discretionary performance-based compensation accruals were stable.

### General and administrative expenses

**YoY:** Down 3% from CHF 638 million to CHF 621 million

The decline was mainly due to lower occupancy costs and lower marketing and sales expenses.

**QoQ:** Down 13% from CHF 712 million to CHF 621 million

The decrease mainly reflected lower premises and equipment expenses and lower non-credit-related provisions in 1Q11 and seasonally higher sales and marketing expenses in 4Q10.

## Personnel

Headcount at the end of 1Q11 was 25,600, unchanged from 4Q10 and up 1,000 from 1Q10. The increase from 1Q10 mainly reflected investments in our growth markets, advisory and solutions capabilities and multi-shore business model, including IT. The number of relationship managers in Wealth Management Clients was stable from 4Q10 and increased by 90 from 1Q10 in Switzerland, EMEA and the Americas.

## Wealth Management Clients

### Net revenues

#### Net interest income

**YoY:** Down 4% from CHF 921 million to CHF 880 million

The decrease reflected lower deposit margins on lower average volumes and higher loan margins on slightly higher average volumes.

**QoQ:** Down 5% from CHF 923 million to CHF 880 million

The decrease mainly reflected lower deposit margins on lower average volumes and, to a lesser extent, slightly lower loan margins on stable average loan volumes. The decline in deposit revenues included the impact from lower volumes related to securities lending and borrowing.

#### Recurring commissions and fees

**YoY:** Down 5% from CHF 956 million to CHF 904 million

The decline was mainly from lower investment product management fees, primarily due to the positive impact from a change in estimate for prior-year fee accruals in 1Q10. Excluding this impact, investment product management fees were stable, reflecting the ongoing risk-averse asset mix. The decrease was partially offset by higher investment account and services fees, mainly from increased investment advisory services and security account fees.

**QoQ:** Stable at CHF 904 million

Lower investment product management fees, mainly reflecting semi-annual performance fees from Hedging-Griffo in 4Q10, were offset by higher investment account and services fees and banking services fees. The increase in investment account and services fees was mainly from advisory services and security account fees.

#### Transaction-based

**YoY:** Up 11% from CHF 587 million to CHF 649 million

The increase was mainly due to higher brokerage and product issuing fees, mainly from equities and structured products, reflecting increased client activity. Foreign exchange income from client transactions and revenues from integrated solutions increased.

**QoQ:** Up 3% from CHF 632 million to CHF 649 million

The increase reflected higher brokerage and product issuing fees, mainly from structured products and equities, reflecting increased client activity, partially offset by lower revenues from integrated solutions. Foreign exchange income from client transactions was solid, and stable compared to 4Q10.

### Gross margin

Our gross margin was 118 basis points in 1Q11, three basis points lower than in 1Q10. The net interest income margin decreased two basis points, due to 4% lower net interest income and stable average assets under management. Recurring commissions and fees margin decreased three basis points, primarily reflecting the decline in investment product management fees from 1Q10, which benefited from the positive impact from the change in estimate for prior-year fee accruals. The transaction-based margin was up two basis points, reflecting 11% higher transaction-based revenues and stable average assets under management.

Compared to 4Q10, the gross margin decreased two basis points, primarily reflecting the 5% decrease in net interest income, 3% increase in transaction-based revenues and stable recurring commissions and fees and stable average assets under management.

## Corporate & Institutional Clients

### Net revenues

#### Net interest income

**YoY: Stable at CHF 296 million**

Net interest income was stable, reflecting stable loan margins on slightly higher average volumes and slightly higher deposit margins on higher average volumes.

**QoQ: Down 2% from CHF 301 million to CHF 296 million**

The decrease reflected lower loan margins on stable average volumes and higher deposit margins on slightly lower average volumes.

#### Recurring commission and fees

**YoY: Up 3% from CHF 100 million to CHF 103 million**

The slight increase mainly reflected higher banking services fees, as investment account and services fees and investment product management fees were stable.

**QoQ: Down 7% from CHF 111 million to CHF 103 million**

Investment product management fees and investment account and services fees decreased, partly offset by higher banking services fees.

## Transaction-based

**YoY: Up 49% from CHF 43 million to CHF 64 million**

The increase reflected higher brokerage and product issuing fees, mainly from interest rate derivatives. Solid foreign exchange income from client transactions was stable. Fair value losses on the Clock Finance transaction were CHF 11 million in 1Q11 and CHF 12 million in 1Q10. Excluding fair value losses on the Clock Finance transaction, transaction-based revenues increased 36%.

**QoQ: Up 68% from CHF 38 million to CHF 64 million**

The increase primarily reflected higher brokerage and product issuing fees, mainly from interest rate derivatives, and lower fair value losses on the Clock Finance transaction of CHF 11 million compared to losses of CHF 16 million in 4Q10, partly offset by lower revenues from integrated solutions. Excluding the fair value losses on the Clock Finance transaction, transaction-based revenues increased 39%.

## Return on business volume

Return on business volume measures revenues over average business volume, which is comprised of client assets and net loans.

Return on business volume of 79 basis points was two basis points higher compared to 1Q10 and 4Q10. The increase from 1Q10 reflected 6% higher net revenues and 4.2% higher average business volume, mainly from higher assets under management. Compared to 4Q10, the increase in return on business volume reflected slightly higher net revenues and stable average business volume.

Excluding the fair value losses on the Clock Finance transaction, return on business volume was 80 basis points in 1Q11 and 79 basis points in 4Q10 and 1Q10.

# Investment Banking

In 1Q11, we reported income before taxes of CHF 1,343 million and net revenues of CHF 4,929 million. Net revenues included strong fixed income and solid equity sales and trading results, reflecting an improved market environment, an increase in client trading volumes and continued market share momentum. Our underwriting and advisory results were solid, although lower than the very strong 4Q10.

## Results overview

In 1Q11, income before taxes was CHF 1,343 million, down 25% compared to 1Q10, and up 141% from 4Q10. Net revenues of CHF 4,929 million were down 6% from 1Q10, but were up 42% from 4Q10. Results in 1Q11 were impacted by the weakening of the US dollar against the Swiss franc, which adversely impacted revenues and favorably impacted expenses. In US dollars, net revenues were 8% higher compared to 1Q10 and 49% higher compared to 4Q10, and pre-tax income was 15% lower compared to 1Q10 and 154% higher compared to 4Q10.

In 1Q11, fixed income sales and trading results were lower than 1Q10 due to the foreign exchange translation impact, but stronger compared to a weak 4Q10, reflecting an increase in

client trading activity and improved market conditions, including a more favorable environment for the global rates business. In 4Q10, our results were impacted by challenging market conditions, a seasonal decline in client trading flows and renewed market volatility from sovereign debt concerns. Our fixed income sales and trading results in 1Q11 were driven by revenues in securitized products, primarily non-agency RMBS, global rates, leveraged finance, emerging markets, corporate lending, high grade trading and foreign exchange. Client flows increased significantly in 1Q11 across most of our fixed income sales and trading businesses, as our investments in our distribution capabilities and flow sales force enabled us to capitalize on increased market volumes.

Equity sales and trading results were weaker compared to 1Q10 due to the foreign exchange translation impact, but

stronger compared to 4Q10, reflecting higher revenues across most businesses, particularly derivatives. Equity sales and trading results were driven by revenues in cash equities, prime services, derivatives and equity arbitrage trading.

Underwriting and advisory results were stronger compared to 1Q10, but lower than 4Q10, which benefited from record initial public offering (IPO) and high yield issuance levels. Debt underwriting revenues were higher compared to 1Q10, primarily due to stronger leveraged finance capital markets activity and an improvement in high yield market share, and lower than 4Q10, due to lower revenues from syndicated loan transactions. The decrease from 4Q10 was partly offset by higher revenues from high yield bond issuances and higher revenues from investment grade issuances. Equity underwriting revenues were lower compared to 1Q10, due to the foreign exchange translation impact, and lower compared to 4Q10, reflecting lower industry-wide issuance volumes, particularly IPOs. Advisory revenues were stronger compared to 1Q10, but lower than 4Q10, in line with industry-wide M&A activity levels.

Our results reflected fair value losses on Credit Suisse vanilla debt and debit valuation adjustments (DVA) relating to certain structured note liabilities. For further information, refer to sales and trading results details and *Note 26 – Financial instruments in V – Condensed consolidated financial statements – unaudited*.

Compensation and benefits of CHF 2,408 million in 1Q11 were higher than 1Q10, primarily driven by higher social security taxes of CHF 70 million, relating to share award deliveries in 1Q11. 2010 share award deliveries occurred in 2Q10. We also had higher deferred compensation expenses from prior year awards. In US dollars, compensation and benefits increased 18%, also including higher discretionary performance-related compensation accruals. Compensation and benefits were also higher than 4Q10, driven by an increase in discretionary performance-related compensation accruals. Total other operating expenses increased 3% compared to 1Q10. In US dollars, total other operating expenses increased 17%, driven by higher general and administrative expenses, mainly reflecting higher IT investment costs, professional and consulting fees and charitable contributions in 1Q11 in lieu of a portion of discretionary performance-related compensation for certain managing directors in the Americas. Total other operating expenses increased compared to 4Q10, mainly driven by higher general and administrative expenses, reflecting an

increase in litigation provisions. Commission expenses increased, primarily reflecting the reclassification in 1Q11 of CHF 22 million of storage costs in our commodities business from fixed income and sales and trading revenues.

Results in 1Q11 were impacted by the weakening of the average rate of the US dollar against the Swiss franc compared to 4Q10 and 1Q10, which adversely affected revenues and favorably impacted expenses. In US dollars, net revenues were 49% higher compared to 4Q10 and 8% higher compared to 1Q10 and total operating expenses were 29% higher compared to 4Q10 and 18% higher compared to 1Q10. For further information on foreign currency translation rates, refer to *VI – Investor information*.

## Performance indicators

### Pre-tax income margin (KPI)

Our target over market cycles is a pre-tax income margin of 25% or greater. The pre-tax income margin was 27.2% in 1Q11, compared to 34.4% in 1Q10 and 16.0% in 4Q10.

### Value-at-Risk

The average one-day, 99% risk management value-at-risk (VaR) was CHF 93 million in 1Q11, compared to CHF 104 million in 1Q10 and CHF 104 million in 4Q10. For further information on VaR, refer to *IV – Treasury, risk, balance sheet and off-balance sheet – Risk management – Market risk*.

### Pre-tax income margin

## Significant transactions and achievements

We were active in executing or advising on a number of significant closed and pending transactions, reflecting the breadth and diversity of our investment banking franchise:

- **Debt capital markets:** We arranged key financings for a diverse set of clients, including Kabel BW (German cable operator), Reynolds Group (global packaging company), Ply Gem Industries (US building products manufacturer), Wells Fargo (US-based global diversified financial services company) and Syniverse Technologies (global technology and business services provider to the telecommunications industry). We also executed two contingent capital transactions for Credit Suisse: a forward private placement of tier 1 BCNs in an exchange for existing Credit Suisse hybrid tier 1 capital notes issued by the Bank in 2008 and a public issuance of tier 2 BCNs.
- **Equity capital markets:** We executed a block trade for Annaly Capital Management (US mortgage REIT), an IPO and mandatory convertible for Nielsen Holdings NV (global information and measurement company), a primary follow-on equity offering for Hana Financial Group (Korean financial holding company) and an IPO for Arezzo Industria e Comercio SA (Brazilian shoe retailer).
- **Mergers and acquisitions:** We advised on a number of key transactions, including the sale of Deutsche Telekom's (European telecommunications company) US subsidiary, T-Mobile USA, to AT&T (US telecommunications company), the sale of Bulgari (Italian luxury goods company) to LVMH Moët Hennessey Louis Vuitton S.A. (global luxury goods conglomerate), the acquisition of Central Networks (UK electricity distribution business) by PPL Corporation (US electricity and natural gas supplier), the sale of Genzyme (US biotechnology company) to Sanofi-Aventis (multinational pharmaceutical company), the sale of Terremark Worldwide, Inc. (global provider of IT infrastructure services) to Verizon Communications, Inc. (global broadband and telecommunications company) and the split-off of Cargill, Incorporated's (privately held multinational corporation) stake in The Mosaic Company (global phosphate and potash producer) to Cargill shareholders and debt holders.

## Geographic expansion

- We commenced securities brokerage operations in the Philippines following the acquisition of a securities broker-dealer license from the Philippines Stock Exchange, strengthening our equities business and complementing our leading financial advisory franchise in the Philippines.

## Industry awards

- Awarded "Best Investment Bank" and "Deal of the Year" for Russia's USD 5.5 billion eurobond by *emeafinance* in its Achievement Awards 2010. We were also awarded "Best M&A Deal in the Middle East", "Best IPO in EMEA", "Most Innovative Sukuk", "Best CHF bond", "Best Samurai bond", "Best IPO in Africa", "Best CEE IPO", and "Private Equity Deal of the Year".
- Awarded *Euromoney* Deals of the Year for "MetLife's acquisition of Alico" for advising MetLife, "Rabobank EUR 1.3 billion contingent capital notes" for serving as lead manager on the transaction, "Wind Telecommunications EUR 6.6 billion senior secured bonds and loan facility" for serving as lead manager on the transaction, "RBS World-Pay Sale to Bain / Advent" for advising Bain / Advent, "AIA USD 20.5 billion IPO" for serving as joint bookrunner on the transaction, and "Republic of the Philippines PHP 44.1 billion global bond" for serving as joint bookrunner on the transaction.
- Awarded "Best Lead Manager of Euro Subordinated FIG Bonds" and "Best Lead Manager of Swiss Franc Bonds" in *EuroWeek* Awards 2010. We were also awarded "Overall and Euro Sovereign Bond Deal of the Year", "US Dollar Sovereign Bond Deal of the Year", "Swiss Franc Bond Deal of the Year", "Corporate Hybrid Bond Deal of the Year", "Sub-Sovereign / Municipal Bond Deal of the Year" and "Euro Supranational / Agency Bond Deal of the Year".
- Received the most "recognitions for excellence" among sell-side brokers in *Greenwich Associates'* Quality Leader designations for 2010. We were recognized for distinguished service in seven categories, including US Equity Sales, US Equity Trading, North American Flow Equity Derivatives, North American Portfolio Trading, European Equity Sales, European Equity Research and Analyst Services and European Equity Trading.
- Named "Best Brokerage House in Asia" by *The Asset* in its Triple A Fund & Securities Services Awards for the second consecutive year. We were also awarded "Best Crossing Network" among brokers for the second consecutive year.
- Awarded "Playbook Deal of the Year" for acquisition finance, refinancing, IPO and M&A related to the Vallar / Bumi Resources / Berau Coal transaction, "Best Sovereign Bond" for the PHP 44.1 billion global bond for the Republic of the Philippines and "Best Liability Management" for Tata Motors USD 300 million and Yen 11.8 billion enhanced conversion by *The Asset* in its Triple A Regional Awards 2010.
- Awarded "Best Overall Broker" in the *Extel Asia 2010 Survey*, as well as "Top Brokerage Firm" for India, Pakistan, Indonesia and Thailand.

- Awarded “Best Sell-Side Broker (Equities)” by *AsianInvestor* in its Korea Awards 2011.

### Market share momentum

- We improved our global share of wallet of underwriting and advisory fees to fourth for 1Q11 according to *Dealogic* and increased market share to 6.6%, compared to fifth for the full-year 2010 with 6.3% market share.
- We improved our share of wallet in the Americas according to *Dealogic* to fourth in 1Q11 with 6.8% market share, from fifth for the full-year 2010 with 6.4% market share.
- We were ranked second by *Dealogic* in global high yield market share in 1Q11 with 11.1% share of wallet, compared to third for the full-year 2010 with 9.8% share of wallet.
- We improved to second in global follow-on issuance in 1Q11 according to *Dealogic* with 9.1% market share, compared to seventh for the full-year 2010 with 4.9% market share.

## Results detail

The following provides a comparison of our 1Q11 results versus 1Q10 (YoY) and versus 4Q10 (QoQ).

### Net revenues

#### Debt underwriting

**YoY: Up 11% from CHF 452 million to CHF 501 million**

The increase was driven by strong results in leveraged finance, reflecting significantly higher leveraged finance capital markets activity and an increase in high yield market share. The increase was partly offset by lower revenues from investment grade debt issuance, reflecting a decline in market share.

**QoQ: Down 16% from CHF 594 million to CHF 501 million**

The decrease was primarily due to lower revenues from leveraged finance, reflecting lower revenues from syndicated loan transactions, partly offset by higher revenues from high yield bond issuances, driven by an increase in high yield issuance volumes and market share. The decrease was partly offset by higher revenues from investment grade debt issuance, reflecting an increase in issuance volumes and market share.

#### Equity underwriting

**YoY: Down 8% from CHF 219 million to CHF 201 million**

The decrease was due to the foreign exchange translation impact. In US dollars, equity underwriting revenues increased slightly, driven by an increase in follow-on issuance volumes and market share, mostly offset by lower revenues from IPOs, reflecting a decline in industry-wide issuance volumes.

**QoQ: Down 32% from CHF 297 million to CHF 201 million**

The decrease reflected lower industry-wide issuance volumes in IPOs, which declined significantly from record issuance levels in 4Q10, and follow-on offerings, partly offset by an increase in follow-on market share.

#### Advisory and other fees

**YoY: Up 6% from CHF 216 million to CHF 228 million**

The increase was due to higher M&A fees, driven by significantly higher industry-wide completed M&A activity, partly offset by a decrease in other advisory fees.

**QoQ: Down 35% from CHF 350 million to CHF 228 million**

The decrease reflected lower M&A fees, driven by lower industry-wide completed M&A activity, and a decrease in completed M&A market share.

#### Fixed income sales and trading

**YoY: Down 6% from CHF 2,662 million to CHF 2,493 million**

The decrease was due to the foreign exchange translation impact. In US dollars, fixed income sales and trading revenues were up 8%. We had stronger results in global rates, which benefited from higher interest rate volatility and increased client flows, higher revenues in commodities compared to modest revenues in 1Q10, higher revenues from leveraged finance trading and modest revenues in fixed income arbitrage trading strategies compared to losses in 1Q10. We continued to have strong revenues in our securitized products business, driven by record revenues in our non-agency RMBS trading business, reflecting an increase in client flows. These results were partly offset by lower revenues in high grade trading and structured credit compared to strong results in 1Q10. We also had lower revenues in our foreign exchange trading business and higher valuation reductions from our commercial mortgage-backed securities (CMBS) exit portfolio. Our results reflected DVA losses of CHF 20 million in 1Q11, compared to DVA losses of CHF 18 million in 1Q10, relating to structured note liabilities, and fair value losses on Credit Suisse vanilla debt of CHF 47 million compared to fair value losses of CHF 53 million in 1Q10.

**QoQ: Up 181% from CHF 888 million to CHF 2,493 million**

The increase was driven by strong results in our global rates, securitized products, primarily non-agency RMBS, leveraged finance, investment grade and emerging markets businesses, reflecting an increase in client trading volumes and a more favorable market environment for most of our fixed income businesses. Our 4Q10 results were negatively affected by challenging market conditions, a seasonal decline in client trading flows and renewed market volatility from sovereign debt concerns. These results were partly offset by valuation reductions in our exit businesses, primarily CMBS and certain

residential mortgage businesses, compared to valuation gains in 4Q10. We also had lower revenues in our commodities business. Our results reflected DVA losses of CHF 20 million compared to DVA gains of CHF 5 million in 4Q10, and fair value losses on Credit Suisse vanilla debt of CHF 47 million compared to fair value losses of CHF 49 million in 4Q10.

#### Equity sales and trading

**YoY: Down 10% from CHF 1,694 million to CHF 1,529 million**

The decrease was due to the foreign exchange translation impact. In US dollars, equity sales and trading revenues were slightly up, driven by record revenues in derivatives, reflecting increased client flows, an improvement in corporate derivatives and a more favorable trading environment, and stable revenues in cash equities and prime services. Our results reflected DVA losses of CHF 65 million, compared to DVA losses of CHF 19 million in 1Q10, and fair value losses on Credit Suisse vanilla debt of CHF 5 million, compared to fair value losses of CHF 6 million in 1Q10.

**QoQ: Up 10% from CHF 1,387 million to CHF 1,529 million**

The increase was driven by record revenues in derivatives, reflecting increased client flows, an improvement in corporate derivatives and a more favorable trading environment. We also had higher revenues in fund-linked products, convertibles, equity arbitrage trading and cash equities driven by higher client trading activity and improved investor risk appetite. This was partly offset by lower revenues in prime services compared to strong results in 4Q10. Our results reflected DVA losses of CHF 65 million, compared to DVA gains of CHF 10 million in 4Q10, and fair value losses on Credit Suisse vanilla debt of CHF 5 million in 1Q11 and 4Q10.

#### Provision for credit losses

**YoY: From CHF (69) million to CHF (19) million**

The change reflected lower releases and recoveries and lower new provisions.

**QoQ: From CHF (27) million to CHF (19) million**

The change reflected lower releases and recoveries and lower new provisions.

#### Operating expenses

##### Compensation and benefits

**YoY: Up 4% from CHF 2,324 million to CHF 2,408 million**

The increase was primarily driven by higher social security taxes of CHF 70 million, relating to share award deliveries in 1Q11. 2010 share award deliveries occurred in 2Q10. We also had higher deferred compensation expenses from prior year awards. In US dollars, compensation and benefits increased 18%, also including higher discretionary performance-related compensation accruals.

**QoQ: Up 32% from CHF 1,823 million to CHF 2,408 million**

The increase was driven by higher discretionary performance-related compensation accruals, reflecting higher risk-adjusted profitability, and higher deferred compensation expenses from prior-year awards, including the social security taxes on share award deliveries.

##### General and administrative expenses

**YoY: Up 3% from CHF 862 million to CHF 887 million**

The increase reflected charitable contributions in 1Q11 in lieu of a portion of discretionary performance-related compensation for certain managing directors in the Americas, and higher professional and consulting fees and non-income tax expenses. 1Q10 included non-income tax refunds. In US dollars, expenses increased 18%, also including higher IT investment costs.

**QoQ: Up 8% from CHF 823 million to CHF 887 million**

The increase reflected higher litigation provisions, charitable contributions, higher client-related event expenses, non-income tax expenses and professional and consulting fees.

#### Personnel

Headcount at the end of 1Q11 was 20,800, stable compared to 4Q10, as an increase in front office personnel, primarily in our fixed income, underwriting and advisory businesses, and in legal professionals driven by higher regulatory requirements was offset by a reduction in allocated IT professionals.

# Asset Management

In 1Q11, we reported income before taxes of CHF 172 million and net revenues of CHF 591 million. Fee-based revenues improved compared with 1Q10, reflecting higher performance fees and carried interest and equity participations income. We had investment-related gains of CHF 160 million and net new assets of CHF 4.5 billion.

<sup>1</sup> Includes allocated funding costs. <sup>2</sup> Includes realized and unrealized gains/(losses) on securities purchased from our money market funds. <sup>3</sup> Includes revenues relating to management of the PAF and income from our equity investment in Aberdeen. <sup>4</sup> Fee-based revenues divided by average assets under management.

## Results overview

In 1Q11, income before taxes was CHF 172 million, up 4% compared to 1Q10 and down 4% compared to 4Q10. Net revenues of CHF 591 million were down 6% from 1Q10 and 4% from 4Q10. Net revenues before investment-related gains and securities purchased from our money market funds were CHF 431 million, up 9% compared to 1Q10, reflecting improved results in diversified investments, alternative investments and traditional investments.

Fee-based revenues increased 2% compared to 1Q10. Asset management fees of CHF 327 million were down 9%, reflecting the end of our transitional fund administration services agreement with Aberdeen, the spin-off and sale of non-core businesses in 2010 and the foreign exchange translation impact. Lower management fees in alternative investments reflected decreases in invested capital in certain private equity funds following realizations, fund of hedge funds redemptions, the impact from the spin-off and sale of non-core businesses and the foreign exchange translation impact. The decrease was partially offset by growth in assets under management in

emerging markets, single manager hedge funds, index strategies and ETFs. Asset management fees in traditional investments benefited from net asset inflows, mainly in higher margin products in equities and multi-asset class solutions. Average assets under management increased 2.2% compared to 1Q10 reflecting net new assets and positive market performance, partially offset by adverse foreign exchange-related movements. Placement, transaction and other fees were 25% higher, primarily reflecting higher placement fees. Performance fees and carried interest were up 113%, mainly due to carried interest on realized private equity gains. Equity participations income increased 78%, primarily reflecting higher income in single manager hedge funds, including our investment in York which closed in 4Q10, and in diversified strategies, including AMF.

Investment-related gains were CHF 160 million, up 25% compared with 1Q10, including realized and unrealized gains in private equity investments in the commodities and industrial sectors and in credit-related investments. Investment-related gains were adversely impacted by the foreign exchange translation impact. 1Q10 included equity participation losses,

reflecting the reduction in our ownership interest in Aberdeen due to an issuance of shares by Aberdeen. Other revenues decreased CHF 109 million, primarily reflecting gains of CHF 107 million in 1Q10 from securities purchased from our money market funds.

Total operating expenses of CHF 419 million were down 10% compared to 1Q10, with lower compensation and benefits, general and administrative and commission expenses. Compensation and benefits decreased 8%, with lower deferred compensation from prior-year awards, discretionary performance-related compensation accruals, salaries and severance costs. General and administrative expenses were down 9%, mainly due to lower expense provisions, as expenses in most categories were lower or stable. The decline in total operating expenses also reflected the sale and spin-off of non-core businesses and the foreign exchange translation impact.

Compared to 4Q10, income before taxes and net revenues were down 4% and fee-based revenues decreased 17%, primarily reflecting the semi-annual performance fees in 4Q10 from Hedging-Griffo, lower carried interest relating to realized private equity gains and lower fees from private equity placements and real estate transactions, partly offset by significantly lower losses related to investments held by AMF. Average assets under management were stable. Investment-related gains increased 58% and net revenues before investment-related gains were down 16%. Total operating expenses decreased 4%, reflecting lower general and administrative and commission expenses, partially offset by higher compensation and benefits.

Results in 1Q11 were impacted by the weakening of the average rate of the US dollar and euro against the Swiss franc compared to 4Q10 and 1Q10, which adversely affected revenues and favorably impacted expenses. For further information on foreign currency translation rates, refer to *VI – Investor information*.

Assets under management were CHF 436 billion, up 2.3% compared to 4Q10, with positive market performance and net new assets. Net new assets of CHF 4.5 billion included net inflows of CHF 3.9 billion in traditional investments, as inflows in multi-asset class solutions, fixed income and equities were partially offset by outflows from Swiss advisory. Net new assets also included inflows of CHF 0.6 billion in alternative investments, as inflows in real estate and commodities and ETFs were mostly offset by private equity realizations and outflows in hedge funds. Compared to 1Q10, assets under man-

agement were stable, with net new assets and positive market performance offset by adverse foreign exchange-related movements.

## Performance indicators

### Pre-tax income margin (KPI)

We target a pre-tax income margin over market cycles of above 35%. The pre-tax income margin was 29.1% in 1Q11, compared to 26.3% in 1Q10 and 29.2% in 4Q10.

### Net new asset growth rate (KPI)

We target a net new asset growth rate of above 6%. The annualized quarterly growth rate was 4.2% in 1Q11, compared to 10.8% in 1Q10 and 4.3% in 4Q10. In 1Q11, the rolling four-quarter average growth rate was 3.2%, compared to 3.7% in 1Q10 and 5.0% in 4Q10.

### Fee-based margin

The fee-based margin, which is asset management fees, placement, transaction and other fees, performance fees and carried interest and equity participations income divided by average assets under management, was 41 basis points in 1Q11, compared to 41 basis points in 1Q10 and 50 basis points in 4Q10.

## Pre-tax income margin

n/m: not meaningful

## Initiatives and achievements

- We entered into a strategic agreement with HDFC Asset Management Company Ltd (HDFC AMC), one of India's largest asset managers, through which Credit Suisse will become the exclusive distributor of HDFC AMC's investment products outside India.
- We achieved outstanding rankings in the 2011 Lipper Fund Awards for six Swiss and Luxembourg funds for delivering consistently strong risk-adjusted performance relative to peers.
- In collaboration with Private Banking, we expanded our range of ETFs to 58, listing two equity and two money market funds on the SIX Swiss Exchange. We are the largest ETF provider in Switzerland.

## Results detail

The following provides a comparison of our 1Q11 results versus 1Q10 (YoY) and versus 4Q10 (QoQ).

### Net revenues

#### Asset management fees

**YoY: Down 9% from CHF 359 million to CHF 327 million**

The decrease resulted from lower fees in alternative investments and diversified investments, partially offset by higher fees in traditional investments. The decline in alternative investments fees reflected the spin-off of our real estate private equity fund and our credit hedge fund at the end of 3Q10, decreases in invested capital in certain private equity funds following realizations, fund of hedge funds redemptions and the foreign exchange translation impact, partially offset by growth in assets under management in emerging markets, single manager hedge funds, index strategies and ETFs. Fees from diversified investments decreased mainly due to lower fees from fund administration services, reflecting the end of our transitional agreement with Aberdeen. Traditional investments fees increased, as higher fees from multi-asset class solutions and equities were partially offset by lower fees in fixed income, including margin compression.

**QoQ: Down 3% from CHF 337 million to CHF 327 million**

Lower fees from diversified investments and traditional investments reflected the end of the transitional agreement with Aberdeen, partially offset by increases in multi-asset class solutions. In alternative investments, higher fees in index strategies and emerging markets, reflecting higher asset under management, were offset by decreases in private equity and fund of hedge funds from the realizations and redemptions.

#### Placement, transaction and other fees

**YoY: Up 25% from CHF 40 million to CHF 50 million**

The increase primarily reflected higher private equity placement fees and transaction fees from real estate funds, partially offset by losses and lower fees on investments held by AMF and lower revenues from integrated solutions.

**QoQ: Up 35% from CHF 37 million to CHF 50 million**

The increase reflected 4Q10 losses on investments held by AMF and lower private equity placement fees and real estate fund transaction fees in 1Q11 compared to a stronger 4Q10.

#### Performance fees and carried interest

**YoY: Up 113% from CHF 16 million to CHF 34 million**

The increase was mainly due to carried interest in alternative investments from realized private equity gains and higher performance fees from diversified investments relating to the PAF, partially offset by lower performance fees in alternative investments from credit strategies, reflecting the spin-off of non-core businesses, and single manager hedge funds.

**QoQ: Down 73% from CHF 128 million to CHF 34 million**

The decrease was mainly due to semi-annual performance fees from Hedging-Griffo in 4Q10, lower carried interest from realized private equity gains and lower performance fees in alternative investments from single-manager hedge funds and credit strategies.

#### Equity participations income

**YoY: Up 78% from CHF 18 million to CHF 32 million**

The increase in equity participations income was due to higher income in single manager hedge fund participations, including York, and in diversified strategies, including AMF.

**QoQ: Up 7% from CHF 30 million to CHF 32 million**

The increase was mainly due to higher income in single manager hedge fund participations, including York, private equity joint ventures and AMF, partially offset by lower income from Aberdeen.

#### Investment-related gains/(losses)

**YoY: Up 25% from CHF 128 million to CHF 160 million**

In 1Q11, we had realized and unrealized gains in private equity investments, mainly in the commodity, industrial, energy and real estate sectors, and in credit-related investments. In 1Q10, we had unrealized gains in private equity investments, mainly in the energy, technology and commodity sectors, and in credit-related investments. Investment-related gains were adversely impacted by the foreign exchange translation impact.

**QoQ: Up 58% from CHF 101 million to CHF 160 million**

In 1Q11, we had realized and unrealized gains in private equity investments, mainly in the commodity, industrial, energy and

<sup>1</sup> Excludes our portion of assets under management from our equity participation in Aberdeen. <sup>2</sup> Primarily private equity investments.

real estate sectors, and in credit-related investments. In 4Q10, we had realized and unrealized gains in private equity investments, mainly in energy, industrials and commodities sectors, partially offset by unrealized losses, mainly in the real estate sector.

#### Equity participations gains/(losses)

**YoY: From CHF (27) million to zero**

1Q10 included losses in diversified investments reflecting the reduction in our ownership interest in Aberdeen due to the issuance of shares by Aberdeen.

#### Operating expenses

##### Compensation and benefits

**YoY: Down 8% from CHF 282 million to CHF 260 million**

The decrease was due to lower deferred compensation from prior-year awards, discretionary performance-related compensation accruals and salaries, reflecting decreased headcount, and severance, partially offset by higher social security taxes on share award deliveries. The decline included the sale and spin-off of non-core businesses and the favorable foreign exchange translation impact.

**QoQ: Up 4% from CHF 250 million to CHF 260 million**

The increase reflected higher discretionary performance-related compensation accruals, higher social security taxes, and higher salaries, mostly offset by lower deferred compensation from prior-year awards.

#### General and administrative expenses

**YoY: Down 9% from CHF 138 million to CHF 125 million**

The decrease was mainly due to lower expense provisions, partially offset by higher professional fees, as expenses in other categories were stable or lower. The decline included the sale and spin-off of non-core businesses and the favorable foreign exchange translation impact.

**QoQ: Down 15% from CHF 147 million to CHF 125 million**

The decrease was mainly due to lower professional fees and small decreases across most categories, partially offset by higher expense provisions compared to releases in 4Q10.

#### Personnel

Headcount at the end of 1Q11 was 2,800, down 100 from 4Q10 and 1Q10. The decrease was mainly driven by a reduction in front office headcount from the repositioning of unprofitable businesses and the spin-off and sale of non-core businesses, and a reduction in IT professionals.

# Assets under management

## Assets under management

Assets under management comprise assets which are placed with us for investment purposes and include discretionary and advisory counterparty assets.

Discretionary assets are assets for which the customer fully transfers the discretionary power to a Credit Suisse entity with a management mandate. Discretionary assets are reported in the segment in which the advice is provided as well as in the segment in which the investment decisions take place. Assets managed by Asset Management for Private Banking clients are reported in both segments and eliminated at Group level.

Advisory assets include assets placed with us where the client is provided access to investment advice but retains discretion over investment decisions.

Assets under management and net new assets include assets managed by consolidated entities, joint ventures and strategic participations. Assets from joint ventures and participations are counted in proportion of our share in the respective entity.

As of the end of 1Q11, assets under management were CHF 1,282.4 billion, up CHF 29.4 billion, or 2.3%, compared to the end of 4Q10, reflecting net new assets and positive market performance. Compared to the end of 1Q10, assets under management were stable. Net new assets in both Private Banking and Asset Management and positive market performance were mainly offset by adverse foreign exchange-related movements.

In Private Banking, assets under management were CHF 957.9 billion, up CHF 25.0 billion, or 2.7%, compared to the

end of 4Q10, and up CHF 12.2 billion, or 1.3%, compared to the end of 1Q10. In Asset Management, assets under management were CHF 435.8 billion, up CHF 10.0 billion, or 2.3%, compared to the end of 4Q10, and stable compared to the end of 1Q10.

For further information, refer to *II – Results by division – Private Banking and – Asset Management and Note 36 – Assets under management in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010*.

## Growth in net new assets (rolling four-quarter average)

in	1Q11	4Q10	1Q10
<b>Growth in net new assets (rolling four-quarter average) (%)</b>			
Private Banking	5.7	6.0	6.0
Asset Management	3.2	5.0	3.7
Assets managed by Asset Management for Private Banking clients	5.3	6.1	2.7
<b>Growth in net new assets</b>	<b>4.9</b>	<b>5.6</b>	<b>5.5</b>

### Net new assets

Net new assets include individual cash payments, security deliveries and cash flows resulting from loan increases or repayments. Interest and dividend income credited to clients, commissions, interest and fees charged for banking services are not included as they do not reflect success in acquiring assets under management. Furthermore, changes due to foreign exchange-related and market movements as well as asset inflows and outflows due to the acquisition or divestiture of businesses are not part of net new assets.

Private Banking recorded net new assets of CHF 18.0 billion in 1Q11, including CHF 15.7 billion in Wealth Management Clients, with inflows in both Swiss and international regions. Asset Management recorded net new assets of CHF 4.5 billion, with inflows mainly in traditional investments.

### Client assets

Client assets is a broader measure than assets under management as it includes transactional and custody accounts (assets held solely for transaction-related or safekeeping/custody purposes) and assets of corporate clients and public institutions used primarily for cash management or transaction-related purposes.

# IV

## **Treasury, risk, balance sheet and off-balance sheet**

48 Treasury management

62 Risk management

69 Balance sheet and off-balance sheet

# Treasury management

We continued to conservatively manage our liquidity and funding position, and our capital position remained strong with a BIS tier 1 ratio of 18.2% as of the end of 1Q11.

## Liquidity and funding management

Securities for funding and capital purposes are issued primarily by the Bank, our principal operating subsidiary and a US registrant. The Bank lends funds to its operating subsidiaries and affiliates on both a senior and subordinated basis, as needed, the latter typically to meet capital requirements, or as desired by management to support business initiatives. For further information on the liquidity principles agreed with FINMA, the liquidity and capital standards under the Basel III framework, the report of the Swiss Expert Commission on “Too Big to Fail” issues relating to big banks, and the revisions to the Basel II market risk framework (Basel II.5), refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management in the Credit Suisse Annual Report 2010*.

## Liquidity risk management

Our internal liquidity risk management framework has been subject to review and monitoring by regulators and rating agencies for many years. Our liquidity and funding policy is designed to ensure that funding is available to meet all obligations in times of stress, whether caused by market events or issues specific to Credit Suisse. We achieve this due to a conservative asset/liability management strategy aimed at maintaining a funding structure with long-term wholesale and stable deposit funding and cash well in excess of illiquid assets. To address short-term liquidity stress, we maintain a buffer of cash and highly liquid securities that covers unexpected needs of short-term liquidity. Our liquidity risk parameters reflect various liquidity stress assumptions, which we believe are conservative. We manage our liquidity profile at a sufficient level such that, in the event that we are unable to access unsecured funding, we will have sufficient liquidity to sustain operations for an extended period of time well in excess of our minimum target. In response to regulatory requirements, our unsecured long-term debt and liquid assets reflect amounts greater than required for funding our businesses.

The impact of a one, two or three-notch downgrade in the Bank’s long-term debt ratings would result in additional collateral requirements or assumed termination payments under certain derivative instruments of CHF 2.4 billion, CHF 4.1 billion and CHF 4.7 billion, respectively, as of 1Q11, and would not be material to our liquidity and funding planning. As of the end of 1Q11, we were compliant with the requirements related to maintaining a specific credit rating under these derivative instruments.

In 2010, we implemented revised liquidity principles agreed with FINMA, following its consultation with the SNB, to ensure that the Group and the Bank have adequate holdings on a consolidated basis of liquid, unencumbered, high-quality securities available in a crisis situation for designated periods of time. The principles aim to ensure we can meet our financial obligations in an extreme scenario for a minimum of 30 days and call for additional reporting to FINMA. The principles may be modified to reflect the final BCBS liquidity requirements.

In December 2010, the BCBS issued the Basel III international framework for liquidity risk measurement, standards and monitoring. The framework includes a liquidity coverage ratio (LCR) and a net stable funding ratio (NSFR). The LCR, which is expected to be introduced January 1, 2015 following an observation period beginning in 2011, addresses liquidity risk over a 30-day period. The NSFR, which is expected to be introduced January 1, 2018 following an observation period beginning in 2012, establishes criteria for a minimum amount of stable funding based on the liquidity of a bank’s assets and activities over a one-year horizon. Our liquidity risk management framework and our revised liquidity principles with FINMA are in line with the Basel III liquidity framework. For further information on the liquidity principles agreed with FINMA and the liquidity standards under the Basel III framework, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management – Liquidity and funding management in the Credit Suisse Annual Report 2010*.

**Funding sources and uses**

We primarily fund our balance sheet through long-term debt, shareholders' equity and core customer deposits. A substantial portion of our balance sheet is match funded and requires no unsecured funding. Match funded balance sheet items consist of assets and liabilities with close to equal liquidity durations and values so that the liquidity and funding generated or required by the positions are substantially equivalent. Cash and due from banks is highly liquid. A significant part of our assets, principally unencumbered trading assets that support the securities business, is comprised of securities inventories and collateralized receivables, which fluctuate and are generally liquid. These liquid assets are available to settle short-term liabilities. These assets include our buffer of CHF 150 billion of cash, securities accepted under central bank facilities and other highly liquid unencumbered securities, which can be monetized in a time frame consistent with our short-term stress assumptions. Our buffer was stable compared to 4Q10, as increased US dollar central bank holdings were offset by the foreign exchange translation impact. Loans, which comprise the largest component of our illiquid assets, are funded by our core customer deposits, with excess coverage of 22% as of 1Q11. We fund other illiquid assets, including real estate, private equity and other long-term investments and a haircut for the illiquid portion of securities, with long-term debt and equity, where we try to maintain a substantial funding buffer. For further information, refer to the chart "Balance sheet funding structure".

Our core customer deposits totaled CHF 265 billion as of 1Q11, stable compared to 4Q10, as an increase in deposits was offset by the foreign exchange translation impact. Core customer deposits are from clients with whom we have a broad and longstanding relationship. Core customer deposits exclude deposits from banks and certificates of deposits. We place a priority on maintaining and growing customer deposits, as they have proved to be a stable and resilient source of funding even in difficult market conditions. Our core customer deposit funding is supplemented by the issuance of long-term debt. The percentage of unsecured funding from long-term debt, excluding non-recourse debt associated with the consolidation of variable interest entities (VIEs), was 28% as of the end of 1Q11, stable compared to 4Q10.

The weighted average maturity of long-term debt was 6.6 years (including certificates of deposits with a maturity of one year or longer, but excluding structured notes, and assuming callable securities are redeemed at final maturity or in 2030 for instruments without a stated final maturity).

**Balance sheet funding structure**

as of March 31, 2011 (CHF billion)

Reverse repurchase agreements	177	<b>Match funded</b>	178	Repurchase agreements
Encumbered trading assets	88		87	Short positions
Funding-neutral assets <sup>1</sup>	133		133	Funding-neutral liabilities <sup>1</sup>
Cash & due from banks	75		42	Other short-term liabilities <sup>2</sup>
Unencumbered liquid assets <sup>3</sup>	168		92	Due to banks & short-term debt
Loans <sup>4</sup>	217	122% coverage	265	Deposits <sup>5</sup>
				time 72
				demand 95
				savings 53
				fiduciary 45
Other illiquid assets	158		176	Long-term debt
			43	Total equity
<b>Assets: 1,016</b>			<b>Liabilities and Equity: 1,016</b>	

<sup>1</sup> Primarily includes brokerage receivables/payables, positive/negative replacement values and cash collateral. <sup>2</sup> Primarily includes excess of funding neutral liabilities (brokerage payables) over corresponding assets. <sup>3</sup> Primarily includes unencumbered trading assets, unencumbered investment securities and excess reverse repurchase agreements, after haircuts. <sup>4</sup> Excludes loans with banks. <sup>5</sup> Excludes due to banks and certificates of deposit.

**Debt issuances and redemptions**

Our capital markets debt issuance includes issues of senior and subordinated debt in US-registered offerings and medium-term note programs, euro market medium-term note programs, Australian dollar domestic medium-term note programs, a Samurai shelf registration statement in Japan and covered bond programs. As a global bank, we have access to multiple markets worldwide and our major funding operations include Zurich, New York, London and Tokyo.

We use a wide range of products and currencies to ensure that our funding is efficient and well diversified across markets and investor types. Substantially all of our unsecured senior debt is issued without financial covenants that could trigger an increase of our cost of financing or accelerate the maturity of the debt, including adverse changes in our credit ratings, cash flows, results of operations or financial ratios.

In 1Q11, the Bank issued CHF 1.9 billion of senior debt with a three year maturity. It also issued CHF 516 million in multiple tranches of domestic covered bonds with maturities ranging between three and 20 years. Senior debt of CHF 2.1 billion, domestic covered bonds of CHF 584 million and subordinated debt of CHF 300 million matured in 1Q11.

For information on capital securities issuances, refer to *Capital management – Capital issuances*.

## Capital management

Our BIS tier 1 ratio was 18.2% as of the end of 1Q11, compared to 17.2% as of the end of 4Q10, reflecting increased tier 1 capital and decreased risk-weighted assets (RWAs). Our core tier 1 ratio increased to 13.0% as of the end of 1Q11 compared to 12.2% as of the end of 4Q10.

Our capital management framework is intended to ensure that there is sufficient capital to support our underlying risks and to achieve management's regulatory and credit rating objectives. Since January 1, 2008, Credit Suisse has operated under the international capital adequacy standards known as Basel II set forth by the BCBS as implemented by FINMA (Basel II "Swiss finish"). These standards affect the measurement of both RWAs and eligible capital.

## Capital structure – Basel II "Swiss finish"

Percentages refer to tier 1 and total eligible capital before capital deductions.

<sup>1</sup> Hybrid instruments in the form of non-cumulative perpetual preferred securities and capital notes that either have a fixed maturity or an incentive to repay, such as a step-up in the coupon if the instrument is not redeemed when callable. <sup>2</sup> Hybrid instruments in the form of non-cumulative perpetual preferred securities and capital notes that have no fixed maturity and no incentive for repayment. <sup>3</sup> Hybrid instruments with a pre-defined mechanism that converts them into tier 1 capital, such as mandatory convertible bonds convertible into common shares. <sup>4</sup> Qualifying noncontrolling interests including common shares in majority owned and consolidated banking and finance subsidiaries and tier 1 capital securities securing deeply subordinated notes issued by special purpose entities.

Under this regulatory capital framework, tier 1 capital consists of shareholders' equity, qualifying noncontrolling interests and hybrid tier 1 capital, and RWAs are determined under Basel II. For further information on this regulatory capital framework and the related BIS tier 1 ratios for the Group and the Bank, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management – Capital management – Regulatory capital – Capital structure – Basel II “Swiss finish” in the Credit Suisse Annual Report 2010* and to the charts “Capital structure – Basel II “Swiss Finish”” and “Risk-weighted assets and capital ratios”.

Beginning in 2011, we have implemented the Basel II market risk framework (Basel II.5) for FINMA regulatory capital purposes. The BCBS requires the implementation of Basel II.5

for BIS purposes no later than December 31, 2011. In December 2010, the BCBS issued the Basel III framework, with higher minimum capital requirements and new conservation and countercyclical buffers, requiring more capital in the form of common equity. In October 2010, the Swiss Expert Commission proposed capital requirements based on Basel III but which go beyond its minimum standards and the current “Swiss finish”. For more information on the Basel III capital requirements and the proposed Expert Commission capital requirements, which are not yet enacted into law, refer to *Regulatory capital developments and proposals* and *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management – Regulatory capital developments and proposals in the Credit Suisse Annual Report 2010*.

## Leverage ratio

end of	Group			Bank		
	1Q11	4Q10	1Q10	1Q11	4Q10	1Q10
<b>Tier 1 capital (CHF billion)</b>						
<b>Tier 1 capital</b> <sup>1</sup>	38.5	37.7	37.5	34.7	35.3	36.5
<b>Adjusted average assets (CHF billion)</b> <sup>2</sup>						
Average assets	1,041	1,065	1,090	1,017	1,041	1,068
Adjustments:						
Assets from Swiss lending activities <sup>3</sup>	(139)	(139)	(138)	(114)	(115)	(114)
Cash and balances with central banks	(47)	(40)	(38)	(46)	(39)	(37)
Other	(30)	(28)	(18)	(29)	(27)	(16)
<b>Adjusted average assets</b>	<b>825</b>	<b>858</b>	<b>896</b>	<b>828</b>	<b>860</b>	<b>901</b>
<b>Leverage ratio (%)</b>						
<b>Leverage ratio</b> <sup>1</sup>	<b>4.7</b>	<b>4.4</b>	<b>4.2</b>	<b>4.2</b>	<b>4.1</b>	<b>4.0</b>

<sup>1</sup> Under Basel II. Using Basel II.5 tier 1 capital of CHF 35.8 billion and CHF 31.9 billion for the Group and the Bank, the leverage ratios as of the end of 1Q11 were 4.3% and 3.9%, respectively. <sup>2</sup> Calculated as the average of the month-end values for the previous three calendar months. <sup>3</sup> Excludes Swiss interbank lending.

Both the Group and the Bank must maintain a minimum leverage ratio of tier 1 capital, for FINMA regulatory capital purposes, to adjusted average assets of 3% at the Group and Bank consolidated level by 2013. The leverage ratios for the Group and Bank as of the end of 1Q11 were 4.7% and 4.2%, respectively, compared to 4.4% and 4.1% as of the end of 4Q10, calculated using Basel II tier 1 capital. Refer to the table “Leverage ratio” for further information. The improvement in the leverage ratios was primarily due to the decrease in adjusted average assets, which reflected the foreign exchange translation impact of the strengthening Swiss franc.

Under FINMA requirements that impose an increase in market risk capital for every regulatory VaR backtesting exception over ten in the prior rolling 12-month period, we had no backtesting exceptions in 1Q11 and, consequently, the market risk capital multipliers remained at the FINMA and BIS minimum levels. For the purposes of this charge, backtesting exceptions are calculated using a subset of actual daily trading revenues that includes only the impact of daily movements in financial market variables such as interest rates, equity prices and foreign exchange rates on the previous night's positions.

For further information, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management in the Credit Suisse Annual Report 2010*.

Total capital ratio	23.7	21.9	21.6	–	24.5	23.1	23.2	–

<sup>1</sup> The methodology for calculating the core tier 1 capital and the core tier 1 ratio was revised in January 2011, whereby "Capital deductions 50% from tier 1" was reclassified from tier 1 capital into core tier 1 capital. <sup>2</sup> Group: 1Q11 includes cumulative fair value adjustments of CHF 0.7 billion on Credit Suisse vanilla debt and structured notes, net of tax, an accrual for the distribution of reserves from capital contributions for 2010 of CHF 1.7 billion and the 1Q11 dividend accrual of CHF 0.5 billion, the net long position in own treasury shares in the trading book and an adjustment for the accounting treatment of pension plans. <sup>3</sup> Non-cumulative perpetual preferred securities and capital notes. The FINMA has advised that the Group and the Bank may continue to include as tier 1 capital CHF 1.1 billion and CHF 3.1 billion, respectively, in 1Q11 (4Q10: CHF 1.1 billion and CHF 3.1 billion, respectively; 1Q10: CHF 1.7 billion and CHF 4.4 billion, respectively) of equity from special purpose entities that are deconsolidated under US GAAP. Hybrid tier 1 capital represented 27.6% and 29.2% of the Group's and the Bank's adjusted tier 1 capital, respectively, as of the end of 1Q11 (4Q10: 28.6% and 29.1%, respectively; 1Q10: 32.3% and 31.7%, respectively). Under the decree with the FINMA, a maximum of 35% of tier 1 capital can be in the form of these hybrid capital instruments, which will be phased out under Basel III.

### Regulatory capital – Group

The increase in the tier 1 ratio compared to 4Q10 reflected a 2% increase in tier 1 capital and a 3% decrease in RWAs.

Tier 1 capital increased to CHF 38.5 billion as of the end of 1Q11. The increase was driven by net income (excluding the impact of fair value gains/(losses) on Credit Suisse debt,

net of tax) and the net sale of treasury shares previously held to satisfy obligations under share-based plans, partially offset by a quarterly dividend accrual, the adverse effect of the foreign exchange translation impact and the effect of share-based compensation. Refer to the table "Tier 1 capital movement" for further information.

## Tier 1 capital movement

in	1Q11	4Q10	1Q10	% change QoQ	% change YoY
<b>Tier 1 capital (CHF million)</b>					
<b>Balance at beginning of period</b>	<b>37,725</b>	37,928	36,207	(1)	4
Net income	1,139	841	2,055	35	(45)
Adjustments for fair value gains/(losses) reversed for regulatory purposes, net of tax	291	456	(88)	(36)	–
Foreign exchange impact on tier 1 capital	(402)	(1,276)	143	(68)	–
Other <sup>1</sup>	(239)	(224)	(850)	7	(72)
<b>Balance at end of period</b>	<b>38,514</b>	<b>37,725</b>	<b>37,467</b>	<b>2</b>	<b>3</b>

<sup>1</sup> Reflects the issuance and redemption of tier 1 capital, the dividend accrual, the effect of share-based compensation (including the purchase of treasury shares to satisfy obligations under share-based plans) and the change in regulatory deductions.

Total eligible capital increased 5% to CHF 50.3 billion. Tier 2 capital increased 17% to CHF 11.7 billion, primarily due to the issuance of USD 2.0 billion lower tier 2 capital, partially offset by a decrease in the fair value of tier 2 instruments (excluding the impact of fair value gains/(losses) on Credit Suisse debt, net of tax), the foreign exchange translation impact and the regulatory amortization of lower tier 2 instruments.

RWAs decreased 3% to CHF 212.2 billion as of the end of 1Q11, mainly reflecting the foreign exchange translation impact and a decrease in Investment Banking, primarily from a reduction in derivatives counterparty exposures and related hedges, a decrease in operational risk related to additional insurance and a decrease in Asset Management, reflecting realizations and redemptions in funds, partially offset by increased corporate lending and leveraged finance exposures in Investment Banking and minor increases in Private Banking relating to lending. Excluding the foreign exchange translation impact, market risk declined slightly, as reductions in equity exposures were mostly offset by increases in rates, emerging markets and non-agency RMBS. For further information regarding market risk, refer to *Risk management – Market risk*.

Our total capital ratio increased to 23.7% as of the end of 1Q11 compared to 4Q10, reflecting the increase in eligible capital and the decrease in RWAs. For further information, refer to the table “BIS statistics”.

As of the end of 1Q11, we had CHF 3.5 billion of qualifying noncontrolling interests, of which CHF 3.2 billion were core tier 1 capital securities secured by participation securities issued by the Bank, and CHF 10.9 billion of tier 1 capital hybrid instruments, of which CHF 2.8 billion were innovative instruments.

## Risk-weighted assets and capital ratios

## Risk-weighted assets by division (Basel II)

	end of			% change	
	1Q11	4Q10	1Q10	QoQ	YoY
<b>Risk-weighted assets by division (CHF million)</b>					
Private Banking	64,041	63,588	60,313	1	6
Investment Banking	124,233	131,233	144,131	(5)	(14)
Asset Management	12,709	13,544	14,130	(6)	(10)
Corporate Center	11,213	10,337	10,537	8	6
<b>Risk-weighted assets</b>	<b>212,196</b>	<b>218,702</b>	<b>229,111</b>	<b>(3)</b>	<b>(7)</b>

For management purposes, the Group allocates to the divisions risk-weighted asset equivalents related to regulatory capital and certain intangible asset deductions from Group tier 1 capital.

The "Risk-weighted assets" chart illustrates the main types of balance sheet positions and off-balance sheet exposures that translate into market, credit, operational and non-counterparty-risk RWAs. Market risk RWAs reflect the capital requirements of potential changes in the fair values of financial instruments in response to market movements inherent in both the balance sheet and the off-balance sheet items. Credit risk RWAs reflect the capital requirements for the possibility of a

loss being incurred as the result of a borrower or counterparty failing to meet its financial obligations or as a result of a deterioration in the credit quality of the borrower or counterparty. Operational risk RWAs reflect the capital requirements for the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. Non-counterparty-risk RWAs primarily reflect the capital requirements for our premises and equipment.

## Risk-weighted assets

as of March 31, 2011 (CHF billion)

<sup>1</sup> Includes primarily trading assets, investment securities and other investments. <sup>2</sup> Includes central bank funds sold, securities purchased under resale agreements and central bank funds purchased, securities sold under repurchase agreements and securities lending transactions.

It is not the nominal size, but the nature (including risk mitigation such as collateral or hedges) of the balance sheet positions or off-balance sheet exposures that determines the

RWAs. For further information, refer to *Regulatory capital developments and proposals*.

### Capital issuances

In 1Q11, we entered into definitive agreements with affiliates and related parties of Qatar Investment Authority and The Olayan Group (the Investors) to issue an aggregate of CHF 5.9 billion Tier 1 Buffer Capital Notes (Tier 1 BCNs). Under the agreements, the Investors will purchase USD 3.45 billion Tier 1 BCNs and CHF 2.5 billion Tier 1 BCNs either for cash or in exchange for their holdings of USD 3.45 billion 11% Tier 1 Capital Notes and CHF 2.5 billion 10% Tier 1 Capital Notes issued in 2008 (Tier 1 Capital Notes). The purchase or exchange will occur no earlier than October 23, 2013, the first call date of the Tier 1 Capital Notes, and is subject to the implementation of Swiss regulations requiring us to maintain buffer capital, confirmation from our primary regulator FINMA that the Tier 1 BCNs will be eligible buffer capital and additional tier 1 capital, as well as receipt of all required consents and approvals from our regulators and shareholders, including approval of additional conditional capital or conversion capital. We will therefore not receive any cash or Tier 1 Capital Notes for the Tier 1 BCNs from the Investors before such time. We have worked closely with FINMA in structuring the terms of the Tier 1 BCNs so as to ensure they will qualify as contingent convertible buffer capital. In addition to the Tier 1 Capital Notes, Qatar Investment Authority and The Olayan Group have significant holdings of our shares and other financial products. The Tier 1 BCNs will be converted into our ordinary shares if our reported common equity tier 1 (CET1) ratio, as determined under BCBS regulations as the end of any calendar quarter, falls below 7% (or any lower applicable minimum threshold), unless FINMA, at our request, has agreed on or prior to the publication of our quarterly results that actions, circumstances or events have restored, or will imminently restore, the ratio to above the applicable threshold. The conversion price will be

the higher of a floor price of USD 20/CHF 20 per share (subject to customary adjustments) or the daily volume weighted average sale price of our ordinary shares over a five day period preceding the notice of conversion. The Tier 1 BCNs will also be converted if FINMA determines that we require public sector capital support to prevent us from becoming insolvent, bankrupt or unable to pay a material amount of our debts, or other similar circumstances. The Tier 1 BCNs are deeply subordinated, perpetual and callable by us five years from the purchase or exchange (i.e., no earlier than 2018) and in certain other circumstances with FINMA approval. Interest is payable on the USD 3.45 billion Tier 1 BCNs and CHF 2.5 billion Tier 1 BCNs at fixed rates of 9.5% and 9%, respectively, and will reset after the first call date. Interest payments will generally be discretionary (unless triggered), subject to suspension in certain circumstances and non-cumulative.

In 1Q11, we issued USD 2.0 billion 7.875% Tier 2 Buffer Capital Notes due 2041 (Tier 2 BCNs). The Tier 2 BCNs are subordinated notes and may be redeemed by the issuer at any time from August 2016. The initial coupon is reset every five years from August 2016. Interest payments will not be discretionary or deferrable. The Tier 2 BCNs will be converted into our ordinary shares if, prior to Basel III, our core tier 1 ratio falls below 7% or, under Basel III, our CET1 ratio falls below 7%. The conversion price will be the higher of a floor price of USD 20 per share (subject to customary adjustments) or the daily volume weighted average sale price of our ordinary shares over a 30-day period preceding the notice of conversion. The Tier 2 BCNs will also be converted if FINMA determines that we require public sector capital support to prevent us from becoming insolvent, bankrupt or unable to pay a material amount of our debts, or other similar circumstances.

### Shareholders' equity

Our total shareholders' equity increased CHF 0.8 billion to CHF 34.1 billion as of the end of 1Q11 from CHF 33.3 billion as of the end of 4Q10. The increase in total shareholders' equity was primarily due to the net income in 1Q11 and the net sale of treasury shares previously held to satisfy obligations under share-based plans, partially offset by a decrease in other comprehensive income due to the adverse impact of

foreign exchange-related movements on cumulative translation adjustments and the effect of share-based compensation. Total shareholders' equity was unaffected by the issuance of common shares out of conditional capital to settle share awards.

For further information on shareholders' equity, refer to the *Consolidated statements of changes in equity (unaudited) in V – Condensed consolidated financial statements – unaudited*.

<b>Tangible book value per share</b>	<b>21.10</b>	<b>20.77</b>	<b>23.40</b>	<b>2</b>	<b>(10)</b>

<sup>1</sup> Tangible shareholders' equity is calculated by deducting goodwill and other intangible assets from total shareholders' equity. Management believes that tangible shareholders' equity and tangible book value per share are meaningful as they are measures used and relied upon by industry analysts and investors to assess valuations and capital adequacy.

## Regulatory capital developments and proposals

In December 2010, the BCBS issued the Basel III framework, with higher minimum capital requirements and new conservation and countercyclical buffers, revised risk-based capital measures, a leverage ratio and liquidity standards. The framework is designed to strengthen the resilience of the banking sector. The new capital standards and capital buffers will

require banks to hold more capital, mainly in the form of common equity. The new capital standards will be phased in from January 1, 2013 through January 1, 2019. For more information, refer to the table "BCBS Basel III phase-in arrangements". The BCBS agreement was adopted by the G-20 nations in November 2010. Each G-20 nation will now need to implement the rules, and stricter or different requirements may be adopted by any G-20 nation.

## BCBS Basel III phase-in arrangements

<sup>1</sup> Indicates transition period. <sup>2</sup> Includes amounts exceeding the limit for deferred tax assets and participations in financial institutions.

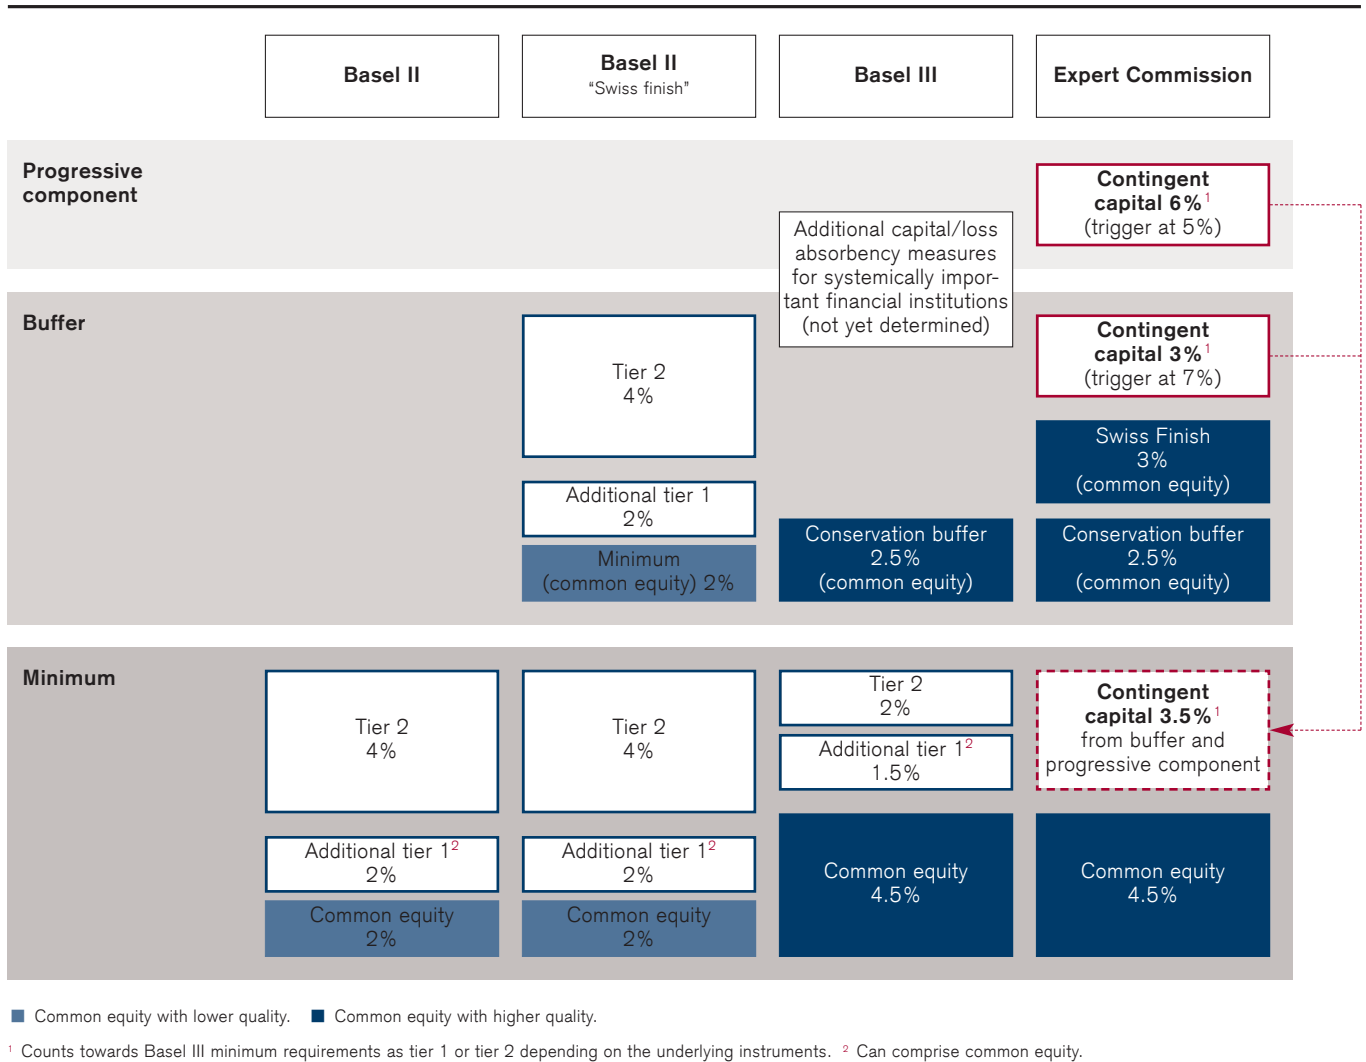

In early October 2010, the Expert Commission appointed by the Swiss Federal Council released its report with recommendations on how to address the "Too Big to Fail" issues relating to big banks. The recommendations include capital and liquidity requirements and proposals regarding risk diversification and emergency plans designed to maintain systemically important functions even in the event of threatened insolvency. The recommendations on capital requirements build on Basel III, but go beyond its minimum standards and the current "Swiss finish". In December 2010, the Swiss Federal Council made a submission for legislative proposals to amend the Banking Act in 2011 based on a report by the Expert Commission. The consultation period ended in 1Q11. The Swiss Parliament is expected to consider many of the recommendations beginning in June 2011.

The Expert Commission recommended that the Swiss capital requirements track the phase-in of the Basel III requirements. If enacted into law, the Group and the Bank would be

required to have common equity of at least 10% of RWAs and contingent capital or other qualifying capital of another 9% of RWAs by January 1, 2019. These recommended requirements may change depending on the market share and size of the big banks and the terms of the requirements enacted into law by the Swiss Parliament. Assuming the Expert Commission's recommendations become law, Credit Suisse believes that it can meet the new requirements within the prescribed time frame by building capital through earnings and by issuing contingent capital or other instruments that qualify for the buffer and progressive capital components.

For more information, refer to the chart "Comparison of capital requirement frameworks", *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management – Regulatory capital developments and proposals in the Credit Suisse Annual Report 2010 and Capital Management – Capital issuances*.

## Comparison of capital requirement frameworks

Source: FINMA

In June 2010, the BCBS announced its decision to postpone the implementation of the revisions to the Basel II market risk framework (Basel II.5) to no later than December 31, 2011. On November 10, 2010, the Swiss Federal Council decided to follow the proposal of FINMA and implement the revisions to the Basel II market risk framework for FINMA regulatory capital purposes by the original implementation date of January 2011. The Basel II.5 revisions include an incremental risk charge, for default and migration risk, and a stressed VaR framework, which are reflected in RWAs. The implementation of the Basel II.5 revisions for FINMA capital purposes increased our RWAs as of the end of 1Q11 by CHF 30.6 billion and reduced tier 1 capital as of the end of 1Q11 by CHF 2.7 billion, resulting in a core tier 1 ratio of 10.2% under Basel

II.5. This Basel II.5 impact primarily related to the Investment Banking securitized products business. For management purposes, the Group allocates to the divisions risk-weighted asset equivalents related to regulatory capital and certain intangible asset deductions from Group tier 1 capital (refer to the table "Basel II.5 risk-weighted assets and allocated deductions"). We expect the combined Basel II.5 and Basel III revisions to increase our RWAs, substantially all in the securitized products, rates, credit, equity derivatives and emerging markets businesses in Investment Banking, to approximately CHF 400 billion on January 1, 2013, before mitigation. We expect to mitigate this increase by reducing RWAs by approximately CHF 50 billion to CHF 70 billion in exit businesses, securitized products, emerging markets and derivatives in Investment Banking.

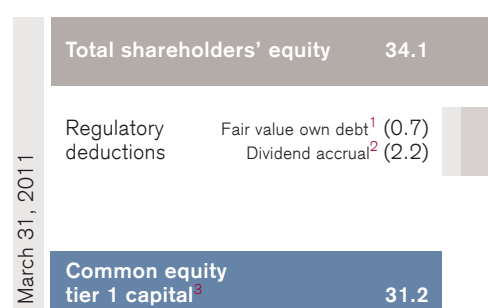

## Basel II.5 risk-weighted assets and allocated deductions

end of 1Q11	Basel II RWAs	Incremental Basel II.5 RWA impact	Total Basel II.5 RWAs	Capital deductions under Basel II <sup>1</sup>	Additional capital deductions under Basel II.5 <sup>1</sup>	Total capital deductions <sup>1</sup>

<sup>1</sup> For management purposes, the Group allocates to the divisions risk-weighted asset equivalents related to regulatory capital and certain intangible asset deductions from Group tier 1 capital.

## Common equity tier 1 ratio simulation as of January 1, 2013 (Basel III)

### Capital development in CHF billion

### Risk-weighted assets (RWAs) development in CHF billion

2014 and beyond

For the years 2014 – 2018, there is a five-year (20% per annum) phase-in of CHF 9.1 billion goodwill and other Basel III capital deductions<sup>9</sup> (e.g., deferred tax assets and participations in financial institutions).

Note: Basel III is expected to be implemented by January 1, 2013, but may be delayed.

<sup>1</sup> Fair value own debt represents the fair value changes from movements in spreads on own debt and structured notes, net of tax. <sup>2</sup> Includes accrual for distribution of reserves from capital contributions for 2010 of CHF 1.7 billion and 1Q11 dividend accrual of CHF 0.5 billion. <sup>3</sup> Applying January 1, 2013 Basel III rules. <sup>4</sup> Bloomberg consensus net income estimate for 2011–2012, adjusted for 1Q11 net income. Consensus earnings are not endorsed or verified and are used solely for illustrative purposes. Actual net income may differ significantly. <sup>5</sup> Bloomberg consensus dividend estimate for 2011–2012, adjusted for 1Q11 dividend accrual, based on 1.2 billion outstanding Group shares. <sup>6</sup> The Group expects to mitigate the increase in risk-weighted assets by reducing them in exit businesses, securitized products, emerging markets and derivatives. <sup>7</sup> Assumes no gross increase in risk-weighted assets from business growth. Our strategic business plan does assume growth. <sup>8</sup> Based on mid-point risk-weighted asset range. <sup>9</sup> Other Basel III capital deductions are expected to be substantially reduced to CHF 6.0 billion by December 31, 2012.

## Economic capital

### Overview

Economic capital is used as a consistent and comprehensive tool for risk management, capital management and performance measurement. Economic capital measures risks in terms of economic realities rather than regulatory or accounting rules

and is the estimated capital needed to remain solvent and in business, even under extreme market, business and operational conditions, given our target financial strength (our long-term credit rating).

For further information, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management in the Credit Suisse Annual Report 2010*.

Prior utilized economic capital and economic capital resources balances have been restated for methodology changes in order to show meaningful trends.

<sup>1</sup> Primarily includes anticipated dividends and unrealized gains on owned real estate. Economic adjustments are made to tier 1 capital to enable comparison between capital utilization and resources. <sup>2</sup> Includes owned real estate risk, expense risk, pension risk, foreign exchange risk between economic capital resources and utilized economic capital, interest rate risk on treasury positions, diversification benefit and an estimate for the impacts of certain methodology changes planned for 2011. <sup>3</sup> Ratio between economic capital resources and utilized economic capital. <sup>4</sup> Includes primarily expense risk diversification benefits from the divisions and foreign exchange risk between economic capital resources and utilized economic capital. <sup>5</sup> Includes a diversification benefit of CHF 18 million, CHF 16 million and CHF 17 million as of the end of 1Q11, 4Q10 and 1Q10, respectively. <sup>6</sup> Includes a diversification benefit of CHF 16 million, CHF 19 million and CHF 17 million as of the end of 1Q11, 4Q10 and 1Q10, respectively.

We regularly review the economic capital methodology in order to ensure that the model remains relevant as markets and business strategies evolve. In 1Q11, we made a number of enhancements to the position risk methodology for risk management purposes. For further information, refer to *Risk management – Economic capital and position risk*. In addition, within economic capital resources, we refined our economic

adjustments methodology for anticipated dividends. Prior periods have been restated for methodology changes in order to show meaningful trends. The total impacts of methodology changes on 4Q10 utilized economic capital and economic capital resources were decreases of CHF 147 million, or 1%, and CHF 311 million, or 1%, respectively, and a reduction in the economic capital ratio as of the end of 4Q10 to 139% from 140%.

We are assessing the implications for the economic capital framework and the economic capital coverage ratio definition of the implementation of Basel II.5 and Basel III. For further information, refer to *Regulatory capital developments and proposals*.

#### Utilized economic capital trends

In 1Q11, our utilized economic capital increased 9% due to higher other risks from increased pension risk reflecting updates to asset and liability valuations, higher interest rate risk on treasury positions within other risks, increased foreign exchange risk between utilized economic capital and economic capital resources and higher expense risk, and increased international lending & counterparty position risks. Excluding the US dollar translation impact, utilized economic capital increased 10%.

For Private Banking, utilized economic capital increased 9%, primarily due to an increase in other risks from higher pension risk, reflecting updates to asset and liability valuations, and higher interest rate risk on treasury positions, partially offset by lower position risk in private banking corporate & retail lending.

For Investment Banking, utilized economic capital increased 9%, primarily due to higher other risks from increased expense risk, higher interest rate risk on treasury positions and higher pension risk, reflecting updates to asset and liability valuations, and higher international lending & counterparty position risks. Excluding the US dollar translation impact, utilized economic capital increased 11%.

For Asset Management, utilized economic capital increased 4%, primarily due to higher interest rate risk on treasury positions and an increase in equity trading & investments position risk. Excluding the US dollar translation impact, utilized economic capital increased 6%.

For Corporate Center, higher utilized economic capital reflected an increase in foreign exchange risk between utilized economic capital and economic capital resources, partially offset by lower expense risk from the diversification benefit.

For further information on our position risk, refer to *Risk management – Key position risk trends*.

#### Capital adequacy trends

The economic capital coverage ratio decreased to 133% in 1Q11 from 139% in 4Q10, primarily reflecting higher utilized economic capital, partially offset by higher economic capital resources due to an increase in tier 1 capital and higher economic adjustments as a result of an increase in anticipated dividends. Our coverage ratio is within our target band of 110% to 140%.

# Risk management

Our overall position risk increased 1% in 1Q11. Excluding the US dollar translation impact, position risk increased 3%. Average risk management VaR decreased 11% to CHF 92 million and period-end risk management VaR decreased 3% to CHF 84 million. In US dollar terms, average risk management VaR decreased 8%.

## Economic capital and position risk

Position risk, which is a component of the economic capital framework, is our core Group-wide risk management tool. It is used to assess, monitor and report risk exposures throughout the Group and represents good market practice. Position risk is the level of unexpected loss in economic value on our portfolio of positions over a one-year horizon, which is exceeded with a given small probability (1% for risk management purposes and 0.03% for capital management purposes).

For further information, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management – Economic capital and position risk in the Credit Suisse Annual Report 2010*.

We regularly review the economic capital methodology to ensure that the model remains relevant as markets and business strategies evolve. In 1Q11, a number of enhancements to the position risk methodology for risk management purposes were made to international lending and counterparty exposures and fixed income trading. For international lending & counterparty exposures, there was an enhancement to the calculation of fair value loan exposures, and for fixed income trading, certain commodity positions are now captured using a scenario-based approach. Prior periods have been restated for methodology changes in order to show meaningful trends. The total impact of 1Q11 methodology changes on 4Q10 position risk was a decrease of CHF 77 million, or 1%.

## Position risk

Prior period balances have been restated for methodology changes in order to show meaningful trends.

<sup>1</sup> This category comprises fixed income trading, foreign exchange and commodity exposures. <sup>2</sup> This category comprises commercial and residential real estate (including RMBS and CMBS), ABS exposure, real estate acquired at auction and real estate fund investments. <sup>3</sup> Reflects the net difference between the sum of the position risk categories and the position risk on the total portfolio.

### Key position risk trends

Position risk for risk management purposes at the end of 1Q11 increased 1% compared to the end of 4Q10. International lending & counterparty exposures increased due to higher loan exposures in leveraged finance and corporate banking. Position risks also increased in fixed income trading due to higher credit spread exposures, in equity trading & investments due to higher traded equity positions, and in real estate & structured assets due to higher non-agency RMBS exposures. Private banking corporate & retail lending position risks decreased due to lower commercial mortgages and commercial loan risk. Emerging markets country event risk declined due to lower exposure in Eastern Europe, Latin America and the Middle East. Excluding the US dollar translation impact, position risk increased 3%.

Compared to the end of 1Q10, position risk for risk management purposes decreased 17%, mainly due to the US dollar translation impact. Fixed income trading decreased following a reduction in credit spread and interest rate exposures. Position risks decreased in equity trading & investments, mainly due to lower traded equity derivative exposures, in private banking corporate & retail lending due to updated loan default and recovery parameters reflecting improved economic conditions, and in emerging markets country event risk due to lower exposure in Eastern Europe, Latin America and the Middle East. International lending & counterparty exposures and real estate & structured assets were stable due to the US dollar translation impact, which offset increases due to higher loan and derivative exposures and higher non-agency RMBS exposures, respectively, in Investment Banking. Excluding the US dollar translation impact, position risk decreased 7%.

As part of our overall risk management, we hold a portfolio of hedges. Hedges are impacted by market movements similar to other trading securities and may result in gains or losses which offset losses or gains on the portfolio they were designated to hedge. Due to the varying nature and structure of hedges, these gains or losses may not perfectly offset the losses or gains on the portfolio.

### Market risk

We primarily assume market risk through the trading activities in Investment Banking. The other divisions also engage in trading activities, but to a much lesser extent. Trading risks are measured using VaR along with a number of other risk

measurement tools. VaR is the potential loss in fair value of trading positions due to adverse market movements over a defined time horizon and for a specified confidence level. VaR relies on historical data and is considered a useful tool for estimating potential loss in normal markets in which there are no abrupt changes in market conditions. Other tools, including stress testing, are more appropriate for modeling the impact from severe market conditions. We regularly review our VaR model to ensure that it remains appropriate given evolving market conditions and the composition of our trading portfolio.

As part of the ongoing review to improve risk management approaches and methodologies, we enhanced the VaR methodology for non-agency RMBS exposures to reflect the risk of assets traded on a price basis instead of a spread-basis and to better capture non-linear effects and basis risk.

Risk management VaR adjusts VaR in cases where short-term market volatility over a six-month period is different than long-term volatility in a three-year dataset. We believe this makes VaR a more useful risk management tool and one that better reflects short-term market volatility. We have approval from FINMA to use this VaR methodology for risk management purposes. For market risk regulatory capital, we continued to use a scaled VaR methodology, referred to as regulatory VaR, which adjusts VaR in cases where short-term market volatility is higher than long-term volatility in a three-year dataset.

We implemented new risk measurement models, including an incremental risk charge and stressed VaR, to meet the Basel II.5 market risk framework for FINMA regulatory capital purposes effective January 1, 2011. The incremental risk charge is a regulatory capital charge for default and migration risk on positions in the trading books and intended to complement additional standards being applied to the VaR modeling framework, including stressed VaR. Stressed VaR replicates a VaR calculation on the Group's current portfolio taking into account a one-year observation period relating to significant financial stress and helps reducing the pro-cyclicality of the minimum capital requirements for market risk.

For both risk management VaR and regulatory VaR, we present one-day, 99% VaR, which is ten-day VaR adjusted to a one-day holding period based on a 99% confidence level. This means there is a 1-in-100 chance of incurring a daily mark-to-market trading loss at least as large as the reported VaR. In order to show the aggregate market risk in our trading books, the chart entitled "Daily risk management VaR" shows the trading-related market risk on a consolidated basis.

## Daily risk management VaR

Excludes risks associated with counterparty and own credit exposures.

## One-day, 99% VaR (CHF)

in / end of	Interest rate & credit spread	Foreign exchange	Commodity	Equity	Diversi- fication benefit	Risk Management VaR <b>Total</b>	Regulatory VaR <b>Total</b>
<b>1Q11 (CHF million)</b>

End of period	145	15	14	22	(74)	122	172

Excludes risks associated with counterparty and own credit exposures.

<sup>1</sup> As the maximum and minimum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

Average risk management VaR during 1Q11 decreased 11% to CHF 92 million from 4Q10, reflecting reductions in market volatility and lower risk in equities, partially offset by increased interest rate & credit spread risk following the introduction of the enhanced non-agency RMBS VaR methodology. Average risk management VaR decreased 12% from 1Q10.

Period-end risk management VaR as of the end of 1Q11 decreased 3% to CHF 84 million from the end of 4Q10, and decreased 35% from the end of 1Q10. The decline in period-end risk management VaR from 1Q10 reflected decreased interest rate, credit and equity exposures.

The impact of the non-agency RMBS methodology change on 4Q10 average risk management VaR would have been an increase of 6% from CHF 103 million to CHF 109 million.

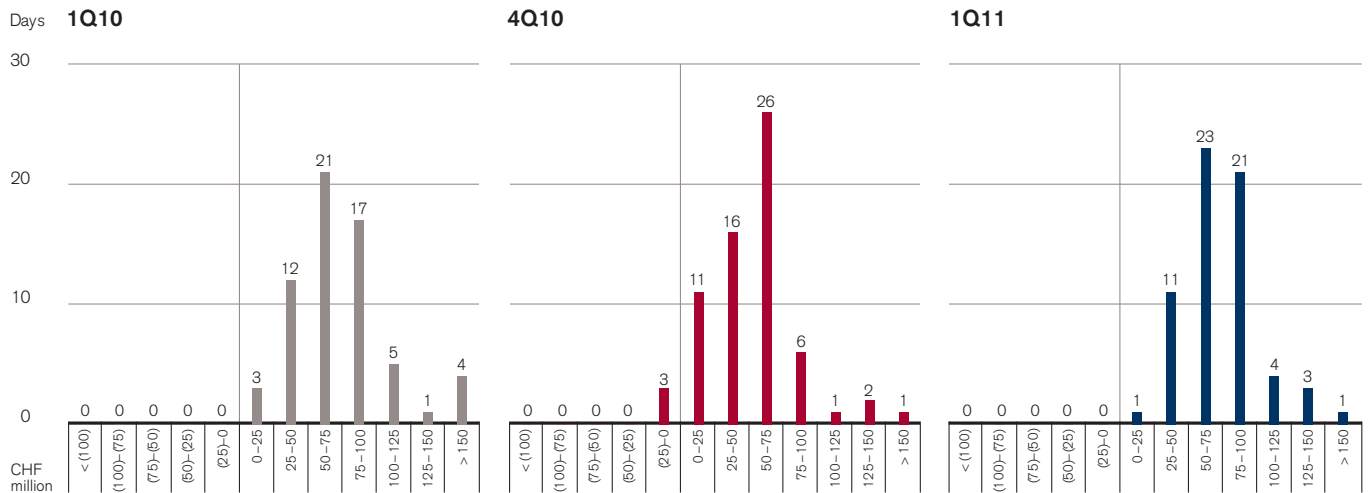

In 1Q11, average regulatory VaR was CHF 132 million, a decrease of 4% from 4Q10. Average regulatory VaR decreased 3% from 1Q10.

Period-end regulatory VaR as of the end of 1Q11 decreased 3% to CHF 120 million from the end of 4Q10, and

decreased 35% from the end of 1Q10. The decline in period-end regulatory VaR from 1Q10 primarily reflected decreased interest rate, credit and equity exposures.

Various techniques are used to assess the accuracy of the VaR models, including backtesting. In line with industry practice, we present backtesting using actual daily trading revenues. Actual daily trading revenues are compared with regulatory VaR calculated using a one-day holding period. A backtesting exception occurs when the trading revenue loss exceeds the daily VaR estimate. We had no regulatory VaR backtesting exceptions during 1Q11. The histogram entitled "Actual daily trading revenues" compares the actual daily trading revenues for 1Q11 with those for 4Q10 and 1Q10. The dispersion of trading revenues indicates of the day-to-day volatility in our trading activities. For further information on the use of our regulatory VaR model in the calculation of trading book market risk capital requirements, refer to *Treasury management – Capital management*.

## Actual daily trading revenues

Excludes Clariden Leu and Neue Aargauer Bank.

Trading revenues do not include valuation adjustments associated with counterparty and own credit exposures.

We assume non-trading interest rate risk through interest rate-sensitive positions originated by Private Banking and risk-transferred to Treasury, money market and funding activities by Treasury and the deployment of our consolidated equity as well as other activities, including market making and trading activities involving banking book positions at the divisions, primarily Investment Banking. Savings accounts and many other retail banking products have no contractual maturity date or direct market-linked interest rate and are risk-transferred from Private Banking to Treasury on a pooled basis using replicating portfolios (approximating the re-pricing behavior of the underlying product). Treasury and other desks running interest rate risk positions actively manage the positions within approved limits.

The impact of a one basis point parallel increase of the yield curves on the fair value of interest rate-sensitive non-trading book positions would have amounted to a valuation increase of CHF 7.0 million as of the end of 1Q11, compared to a valuation increase of CHF 8.5 million as of the end of 4Q10.

### Credit risk

Credit risk is the possibility of a loss being incurred as the result of a borrower or counterparty failing to meet its financial obligations. In the event of a default, a bank generally incurs

a loss equal to the amount owed by the debtor, less any recoveries resulting from foreclosure, liquidation of collateral or the restructuring of the debtor company.

The majority of our credit risk is concentrated in Private Banking and Investment Banking. Credit risk exists within lending products, commitments and letters of credit, and results from counterparty exposure arising from derivatives, foreign exchange and other transactions and may be on or off-balance sheet.

Our regular review of the creditworthiness of clients and counterparties does not depend on the accounting treatment of the asset or commitment. Adverse changes in the creditworthiness of counterparties of loans held at fair value are reflected in valuation changes reported directly in revenues, and therefore are not part of the impaired loans balance. For further information on credit risk, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management – Credit risk in the Credit Suisse Annual Report 2010*. For further information on counterparty credit risk, refer to *Note 26 – Financial instruments in V – Condensed consolidated financial statements – unaudited*.

Our risk-based credit exposure to Portugal, Italy, Ireland, Greece and Spain was not material to our financial condition as of the end of 1Q11. For further information, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management – Credit risk in the Credit Suisse Annual Report 2010*.

The following table represents credit risk from loans, loan commitments and certain other contingent liabilities, loans held-for-sale, traded loans and derivative instruments before consideration of risk mitigation such as cash collateral and marketable securities or credit hedges. Loan commitments

include irrevocable credit facilities for Investment Banking and Private Banking and, additionally in Private Banking, unused credit limits which can be revoked at our sole discretion upon notice to the client.

Before risk mitigation, for example, collateral, credit hedges.

<sup>1</sup> Positive replacement value after netting agreements. <sup>2</sup> Includes CHF 137 billion, CHF 137 billion and CHF 140 billion of unused credit limits which were revocable at our sole discretion upon notice to the client at the end of 1Q11, 4Q10 and 1Q10, respectively.

## Loan exposure

Compared to the end of 4Q10, gross loans increased 2% to CHF 223.5 billion. In Private Banking, the increase of 2% to CHF 186.6 billion was primarily due to an increase in consumer loans, while corporate and institutional loans were stable. In consumer loans, the increase was primarily due to the growth in loans collateralized by securities and mortgages to individuals in Switzerland. Gross loans in Investment Banking increased 2% to CHF 37.0 billion, primarily due to an increase in loan exposures to financial institutions and higher commercial and industrial loans.

Gross impaired loans decreased 8% to CHF 1.7 billion due to a decrease of 4% in Private Banking, mainly from certain repayments and write-offs, and a decline of 17% in Investment Banking, primarily due to restructurings and loan sales. A portion of the impaired loans in Investment Banking is economically hedged by insurance and other risk mitigation, including credit default swaps (CDS).

We recorded a net release of provision for credit losses of CHF 7 million in 1Q11, compared to a net release of CHF 23 million in 4Q10, as a net release of provision of CHF 19 million in Investment Banking was partially offset by a net new provision of CHF 12 million in Private Banking. For further information, refer to *II – Results by division – Private Banking and Investment Banking*.

Compared to the end of 1Q10, gross loans decreased 3%, as a significant decrease in Investment Banking was partially offset by an increase in Private Banking. In Investment Banking, in addition to the US dollar translation impact, we had a decrease across all classes, but particularly in commercial and industrial loans and in loans to governments and public institutions. The increase of gross loans of 4% in Private Banking was primarily due to higher exposures in loans collateralized by securities, mortgages and commercial and industrial loans. Gross impaired loans decreased CHF 537 million, or 24%, driven by lower non-performing loans in Investment Banking and lower non-interest-earning loans in Private Banking.

The loan metrics for loans in Investment Banking and Credit Suisse will be included in our Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

# Balance sheet and off-balance sheet

Total assets were CHF 1,016.5 billion and total liabilities were CHF 973.2 billion. The majority of our transactions are recorded on our balance sheet, however, we also enter into transactions that give rise to both on and off-balance sheet exposure.

## Balance sheet

Total assets were CHF 1,016.5 billion as of the end of 1Q11, down slightly from the end of 4Q10. Excluding the foreign exchange translation impacts, total assets were stable. Central bank funds sold, securities purchased under resale agreements and securities borrowing transactions decreased CHF 16.0 billion, or 7%, mainly from a decline in resale agreements collateralized by government securities. Trading assets decreased CHF 10.5 billion, or 3%, and all other assets decreased CHF 9.1 billion, or 6%. These decreases were offset by increases of CHF 8.5 billion, or 22%, in brokerage receivables, reflecting client-flow business, CHF 7.9 billion, or 12%, in cash and due from banks, mainly from increased US dollar central bank holdings, and CHF 3.7 billion, or 2%, in net loans.

The decrease in all other assets included a decrease of CHF 5.1 billion, or 12%, in securities received as collateral, a decrease of CHF 1.9 billion, or 23%, in investment securities, and a decrease of CHF 1.5 billion, or 2%, in other assets, mainly relating to a decrease in cash collateral on derivative instruments.

Total liabilities were CHF 973.2 billion as of the end of 1Q11, down slightly from the end of 4Q10. Central bank funds purchased, securities sold under repurchase agreements and securities lending transactions decreased CHF 27.3 billion, or 16%, and all other liabilities decreased CHF 3.8 billion, or 3%. These decreases were mostly offset by increases of CHF 5.7 billion, or 2%, in customer deposits, CHF 3.6 billion, or 10%, in due to banks, CHF 2.9 billion, or

5%, in brokerage payables and CHF 2.1 billion, or 1%, in long-term debt.

The decrease in all other liabilities primarily included a decrease of CHF 5.1 billion, or 12%, in obligation to return securities received as collateral, partially offset by an increase of CHF 1.3 billion, or 6%, in short-term borrowings.

For further information, including our funding of the balance sheet and the leverage ratio, refer to *Treasury management – Funding sources and uses and Capital management*.

## Off-balance sheet

We enter into off-balance sheet arrangements in the normal course of business. Off-balance sheet arrangements are transactions or other contractual arrangements with, or for the benefit of, an entity that is not consolidated. These transactions include derivative instruments, guarantees and similar arrangements, retained or contingent interests in assets transferred to an unconsolidated entity in connection with our involvement with special purpose entities (SPEs), and obligations and liabilities (including contingent obligations and liabilities) under variable interests in unconsolidated entities that provide financing, liquidity, credit and other support.

For further information, refer to *III – Treasury, Risk, Balance sheet and Off-balance sheet in the Credit Suisse Annual Report 2010 and Note 24 – Guarantees and commitments and Note 29 – Litigation in V – Condensed consolidated financial statements – unaudited*.

# V

## Condensed consolidated financial statements – unaudited

On or about May 10, 2011, we will publish and file with the SEC our Financial Report 1Q11, which will include additional disclosures on:

- fair value of financial instruments;
- loans, allowance for loan losses and credit quality;
- derivatives and hedging activities;
- investment securities;
- guarantees and commitments;

# Notes to the condensed consolidated financial statements – unaudited

## Note 1 Summary of significant accounting policies

---

### Basis of presentation

The accompanying unaudited condensed consolidated financial statements of Credit Suisse Group AG (the Group) are prepared in accordance with accounting principles generally accepted in the United States of America (US GAAP) and are stated in Swiss francs (CHF). These condensed consolidated financial statements should be read in conjunction with the US GAAP consolidated financial statements and notes thereto for the year ended December 31, 2010, included in the Credit Suisse Annual Report 2010. For a description of the Group's significant accounting policies, refer to *Note 1 – Summary of significant accounting policies in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010*.

Certain financial information, which is normally included in annual consolidated financial statements prepared in accordance with US GAAP but not required for interim reporting purposes, has been condensed or omitted. Certain reclassifications have been made to the prior period's consolidated financial statements to conform to the current period's presentation. These condensed consolidated financial statements reflect, in the opinion of management, all adjustments that are necessary for a fair presentation of the condensed consoli-

dated financial statements for the periods presented, except with respect to the additional disclosures on fair value of financial instruments, loans, allowance for loan losses and credit quality, derivatives and hedging activities, investment securities, guarantees and commitments, assets pledged or assigned, and transfers of financial assets and VIEs. These disclosures will be included in the Financial Report 1Q11 to be published on our website and filed with the SEC on or about May 10, 2011. The presentation of period over period change, the 4Q10 consolidated statements of operations and the 4Q10 consolidated balance sheet and consolidated statements of changes in equity have been added for convenience of the reader and are not a required presentation under US GAAP. The results of operations for interim periods are not indicative of results for the entire year.

In preparing these condensed consolidated financial statements, management is required to make estimates and assumptions which affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the condensed consolidated balance sheets and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

## Note 2 Recently issued accounting standards

---

### Recently adopted accounting standards

The following provides the most relevant recently adopted accounting standards. For a description of accounting standards adopted in 2010, refer to *Note 2 – Recently issued accounting standards in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010*.

#### ASC Topic 310 – Receivables

In January 2011, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2011-01, "Deferral of the Effective Date of Disclosures about Troubled

Debt Restructurings in Update No. 2010-20" (ASU 2011-01), an update to Topic 310 – Receivables.

The amendment in ASU 2011-01 temporarily delays the effective date of the disclosures about troubled debt restructurings in ASU 2010-20. ASU 2011-01 was effective upon issuance and the adoption thereof did not impact the Group's financial condition, results of operations or cash flows.

In July 2010, the FASB issued ASU 2010-20, "Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses" (ASU 2010-20), an update to Topic 310 – Receivables.

The amendments in ASU 2010-20 enhance disclosures about the credit quality of financing receivables and the

allowance for credit losses. As a result of the update, entities are required to provide a greater level of disaggregated information about the credit quality of financing receivables and the allowance for credit losses. Entities are also required to disclose credit quality indicators, past due information, and modifications of its financing receivables. The enhanced disclosures are designed to help financial statement users assess an entity's credit risk exposures and its allowance for credit losses.

The disclosures as of the end of a reporting period were effective for the first interim or annual reporting period ending after December 15, 2010. The disclosures about activity that occurred during a reporting period are effective for the first interim or annual reporting period beginning after December 15, 2010. ASU 2010-20 is an update only for disclosures and as such did not impact the Group's financial position, results of operations or cash flows. The Group adopted ASU 2010-20 on December 31, 2010 and provided the disclosures under this ASU that were effective for the first annual reporting period ending after December 15, 2010 in the Group's consolidated financial statements in the Credit Suisse Annual Report 2010. Certain disclosures required by ASU 2010-20, including the disclosures about activity that occurred during a reporting period, will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

#### **ASC Topic 820 – Fair Value Measurements and Disclosures**

In January 2010, the FASB issued ASU 2010-06, "Improving Disclosures about Fair Value Measurements" (ASU 2010-06), an update to Topic 820 – Fair Value Measurements and Disclosures. ASU 2010-06 requires both new and clarifies existing fair value measurement disclosures. The new requirements include disclosure of significant transfers in and out of level 1 and 2 and gross presentation of purchases, sales, issuances, and settlements in the reconciliation of beginning and ending balances of level 3 instruments. The clarifications required by ASU 2010-06 include the level of disaggregation in the fair

value hierarchy and level 3 reconciliation of assets and liabilities by class of financial instrument. In addition the ASU expanded disclosures about the valuation techniques and inputs used to measure fair value for both recurring and non-recurring fair value measurements included in levels 2 and 3 of the fair value hierarchy.

The new disclosures and clarifications were effective for interim and annual periods beginning after December 15, 2009, except the disclosures about purchases, sales, issuances, and settlements in reconciliation of beginning and ending balances of level 3 instruments, which are effective for interim and annual periods beginning after December 15, 2010. ASU 2010-06 is an update only for disclosures and as such did not impact the Group's financial position, results of operations or cash flows. The disclosures required by ASU 2010-06 will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

#### **Standards to be adopted in future periods**

##### **ASC Topic 310 – Receivables**

In April 2011, the FASB issued ASU 2011-02, "A Creditor's Determination of Whether a Restructuring Is a Troubled Debt Restructuring" (ASU 2011-02), an update to Topic 310 – Receivables. ASU 2011-02 provides guidance in evaluating whether a restructuring constitutes a troubled debt restructuring. In order to meet the requirements for a troubled debt restructuring, a creditor must separately conclude that both the restructuring constitutes a concession and the debtor is experiencing financial difficulties. The amendments clarify the guidance on a creditor's evaluation of whether it has granted a concession and also clarify the guidance on a creditor's evaluation of whether a debtor is experiencing financial difficulties. ASU 2011-02 is effective for the first interim or annual period beginning on or after June 15, 2011 and should be applied retrospectively to the beginning of the annual period of adoption. The adoption of ASU 2011-02 is not expected to have a material impact on the Group's financial condition, results of operations or cash flows.

#### **Note 3 Business developments**

---

##### **Acquisitions and divestitures**

There were no significant acquisitions or divestitures in 1Q11.

#### Note 4 Discontinued operations

On December 31, 2008, the Group signed an agreement to sell part of its traditional investments business in Asset Management to Aberdeen Asset Management (Aberdeen). The transaction was completed with the final closing on July 1, 2009. In return for the sale of these businesses, the Group acquired 240 million shares in Aberdeen, resulting in a total interest of 23.9%, with subsequent ownership changes reflected in continuing operations. Prior to this transaction, Aberdeen was an unrelated party to the Group. In 1Q10 and 3Q10, Aberdeen issued shares resulting in a reduction of our ownership percentage to 21.0% as of the end of 4Q10. As part of the sale of the traditional investments business, we purchased certain assets in the amount of CHF 114 million in 1Q10 in accordance with contractual obligations and recog-

nized losses of CHF 19 million included in discontinued operations. The remaining balance of the assets purchased in 1Q10 was sold or matured in 1Q11.

The results of operations of the business sold have been reflected in income from discontinued operations in the consolidated statements of operations for all periods presented. The assets and liabilities of the business sold have been presented as assets of discontinued operations held-for-sale and liabilities of discontinued operations held-for-sale, respectively, in the consolidated balance sheet beginning in 4Q08. Assets and liabilities are reclassified as held-for-sale in the period in which the disposal determination is made, and prior periods are not reclassified.

Note 5 **Segment information**

---

**Overview**

The Group is a global financial services company domiciled in Switzerland. The Group's business consists of three segments: Private Banking, Investment Banking and Asset Management. The three segments are complemented by Shared Services, which provides support in the areas of finance, operations, including human resources, legal and compliance, risk management and information technology. The segment information reflects the Group's reportable segments as follows:

- Private Banking offers comprehensive advice and a broad range of wealth management solutions, including pension planning, life insurance products, tax planning and wealth and inheritance advice, which are tailored to the needs of high-net-worth and ultra-high-net-worth individuals worldwide. In Switzerland, it supplies banking products and services to individual clients, including affluent, high-net-worth and ultra-high-net-worth clients, and corporates and institutions.
- Investment Banking offers investment banking and securities products and services to corporate, institutional and government clients around the world. Its products and services include debt and equity underwriting, sales and trading, mergers and acquisitions advice, divestitures, corporate sales, restructuring and investment research.
- Asset Management offers integrated investment solutions and services to institutions, governments and private clients. It provides access to a wide range of investment classes, building on its global strengths in alternative investments and traditional investments.

Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses that have not been allocated to the segments. In addition, Corporate Center includes consolidation and elimination adjustments required to eliminate inter-company revenues and expenses.

Noncontrolling interest-related revenues and expenses resulting from the consolidation of certain private equity funds and other entities in which the Group does not have a significant economic interest in such revenues and expenses are reported as noncontrolling interests without significant economic interest. The consolidation of these entities does not affect net income as the amounts recorded in net revenues and total operating expenses are offset by corresponding amounts reported as noncontrolling interests. In addition, our tax expense is not affected by these revenues and expenses.

**Revenue sharing and cost allocation**

Responsibility for each product is allocated to a segment, which records all related revenues and expenses. Revenue-sharing and service level agreements govern the compensation received by one segment for generating revenue or providing services on behalf of another. These agreements are negotiated periodically by the relevant segments on a product-by-product basis.

The aim of revenue-sharing and cost allocation agreements is to reflect the pricing structure of unrelated third-party transactions.

Corporate services and business support in finance, operations, including human resources, legal and compliance, risk management and information technology are provided by the Shared Services area. Shared Services costs are allocated to the segments and Corporate Center based on their requirements and other relevant measures.

**Funding**

The Group centrally manages its funding activities. New securities for funding and capital purposes are issued primarily by Credit Suisse AG, the Swiss bank subsidiary of the Group (the Bank). The Bank lends funds to its operating subsidiaries and affiliates on both a senior and subordinated basis, as needed, the latter typically to meet capital requirements, or as desired by management to capitalize on opportunities. Capital is distributed to the segments considering factors such as regulatory capital requirements, utilized economic capital and the historic and future potential return on capital.

Transfer pricing, using market rates, is used to record net revenues and expense in each of the segments for this capital and funding. The Group's funds transfer pricing system is designed to allocate to its businesses funding costs in a way that incentivizes their efficient use of funding. The Group's funds transfer pricing system is an essential tool that allocates to the businesses the short-term and long-term costs of funding their balance sheet and the costs associated with funding liquidity and balance sheet items, such as goodwill, which are beyond the control of individual businesses. This is of greater importance in a stressed capital markets environment where raising funds is more challenging and expensive. Under this system, the Group's businesses are also credited to the extent they provide long-term stable funding.

**Taxes**

The Group's segments are managed and reported on a pre-tax basis.

<b>Trading revenues</b>	<b>2,011</b>	<b>1,315</b>	<b>3,452</b>	<b>53</b>	<b>(42)</b>

Represents revenues on a product basis which are not representative of business results within segments, as segment results utilize financial instruments across various product types.

Trading revenues includes revenues from trading financial assets and liabilities as follows:

- Equities;
- Commodities;
- Listed and over-the-counter (OTC) derivatives;
- Derivatives linked to funds of hedge funds and providing financing facilities to funds of hedge funds;
- Market making in the government bond and associated OTC derivative swap markets;
- Domestic, corporate and sovereign debt, convertible and non-convertible preferred stock and short-term securities such as floating rate notes and commercial paper (CP);
- Market making and positioning in foreign exchange products;
- Credit derivatives on investment grade and high yield credits;
- Trading and securitizing all forms of securities that are based on underlying pools of assets; and
- Life settlement contracts.

Trading revenues also includes changes in the fair value of financial assets and liabilities elected to fair value under US GAAP. The main components include certain instruments from the following categories:

- Central bank funds purchased/sold;
- Securities purchased/sold under resale/repurchase agreements;
- Securities borrowing/lending transactions;

- Loans and loan commitments; and
- Customer deposits, short-term borrowings and long-term debt.

**Managing the risks**

As a result of the Group's broad involvement in financial products and markets, its trading strategies are correspondingly diverse and exposures are generally spread across a diversified range of risk factors and locations. The Group uses an economic capital limit structure to limit overall risk taking. The level of risk incurred by its divisions is further restricted by a variety of specific limits, including consolidated controls over trading exposures. Also, as part of its overall risk management, the Group holds a portfolio of economic hedges. Hedges are impacted by market movements, similar to trading securities, and may result in gains or losses on the hedges which offset losses or gains on the portfolios they were designed to economically hedge. The Group manages its trading risk with regard to both market and credit risk. For market risk, it uses tools capable of calculating comparable exposures across its many activities, as well as focused tools that can specifically model unique characteristics of certain instruments or portfolios.

The principal measurement methodology for trading assets, as well as most instruments for which the fair value option was elected, is value-at-risk. The Group holds securities as collateral and enters into CDS to mitigate the credit risk on these products.

<sup>1</sup> Recorded as cash collateral on derivative instruments in Note 17 - Other assets and other liabilities.

Note 15 **Investment securities**

The required disclosures for investment securities will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

Management determined that the unrealized losses on debt securities are primarily attributable to general market interest

rate, credit spread or exchange rate movements. No significant impairment charges were recorded as the Group does not intend to sell the investments, nor is it more likely than not that the Group will be required to sell the investments before the recovery of their amortized cost bases, which may be maturity.

Note 16 **Loans, allowance for loan losses and credit quality**

Loans are divided in two portfolio segments "consumer loans" and "corporate and institutional loans". Consumer loans are disaggregated into the classes of mortgages, loans collateralized by securities and consumer finance. Corporate and institutional loans are disaggregated into the classes of real estate, commercial and industrial loans, financial institutions and governments and public institutions.

The determination of the loan classes is primarily driven by the customer segmentation in the two business divisions, Private Banking and Investment Banking, that are engaged in

credit activities. The Group assigns both counterparty and transaction ratings to its credit exposures. The counterparty rating reflects the probability of default (PD) of the counterparty. The transaction rating reflects the expected loss, considering collateral, on a given transaction if the counterparty defaults. Credit risk is assessed and monitored on the single obligor and single obligation level as well as on the credit portfolio level as represented by the classes of loans. Credit limits are used to manage counterparty credit risk.

### Credit quality of loans held at amortized cost

Management monitors the credit quality of loans through its credit risk management processes, which are structured to assess, quantify, price, monitor and manage risk on a consistent basis. This process requires careful consideration of proposed extensions of credit, the setting of specific limits, monitoring during the life of the exposure, active use of credit mitigation tools and a disciplined approach to recognizing credit impairment.

Management evaluates many factors when assessing the credit quality of loans. These factors include the volatility of default probabilities, rating changes, the magnitude of potential loss, internal risk ratings and geographic, industry and other economic factors. For the purpose of credit quality dis-

closures, the Group uses internal risk ratings as credit quality indicators.

The Group employs a set of credit ratings for the purpose of internally rating counterparties. Internally developed models are built from statistical data and then subject to a thorough business review before implementation. Relevant quantitative data and qualitative factors relating to the counterparty result in the assignment of a credit rating which measures the counterparty's risk of default.

Internal ratings are reviewed annually and calibrated to external rating agencies using the historical PD associated with external ratings. Internal rating levels for PD are generally in line with the rating levels of Standard & Poor's. Loans modified in a troubled debt restructuring are reported as restructured loans to the end of the reporting year in which the loan was modified or until expiration of any interest concession made.

Reverse repurchase agreements are fully collateralized and in the event of counterparty default the repurchase agreement provides the Group the right to liquidate the collateral held.

The Group risk manages these instruments on the basis of the value of the underlying collateral, as opposed to loans, which are risk managed on the ability of the counterparty to repay. Therefore the underlying collateral coverage is the most appropriate credit quality indicator for reverse repurchase agreements. The Group has elected the fair value option for the majority of its reverse repurchase agreements.

### Impaired loans

For further information on impaired loan categories and allowance for specifically identified credit losses on impaired loans, refer to *Note 18 – Loans, allowance for loan losses and credit quality in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010.*

Note 20 **Tax****Effective tax rate**

in	1Q11	4Q10	1Q10
<b>Effective tax rate (%)</b>			
<b>Effective tax rate</b>	<b>23.7</b>	25.3	28.2

The 1Q11 effective tax rate was mainly impacted by the geographical mix of results. The effective tax rate also reflected a positive impact from the re-measurement of deferred tax assets in the US.

**Net deferred tax assets**

end of	1Q11	4Q10	Change
<b>Net deferred tax assets (CHF million)</b>			
Net operating losses	4,993	5,521	(528)
Temporary differences	3,188	3,484	(296)
<b>Net deferred tax assets</b>	<b>8,181</b>	<b>9,005</b>	(824)

Overall, net deferred tax assets decreased CHF 824 million to CHF 8,181 million as of the end of 1Q11. The reduction in net deferred tax assets primarily related to the impact of current period earnings. The decline also reflected foreign exchange translation losses of CHF 201 million. The split of net deferred tax assets between deferred tax assets related to net operating losses and deferred tax assets on timing differences is in accordance with ASC Topic 740 – Income Taxes guidance to interim reporting.

The Group is currently subject to ongoing tax audits and inquiries with the tax authorities in a number of jurisdictions,

including the US, the UK and Switzerland. Although the timing of the completion of these audits is uncertain, it is reasonably possible that some of these audits and inquiries will be resolved within 12 months of the reporting date. It is reasonably possible that there will be a decrease between zero and CHF 65 million in unrecognized tax benefits within 12 months of the reporting date.

The Group remains open to examination from federal, state, provincial or similar local jurisdictions from the following years onward in these major countries: Switzerland – 2007; Japan – 2005; the UK – 2003; and the US – 1999.

## Note 21 Employee deferred compensation

Payment of deferred compensation to employees is determined by the nature of the business, role, location and performance of the employee. Unless there is a contractual obligation, granting deferred compensation is solely at the discretion of senior management. For further information on cash and share-based awards and the related fair value assumptions, refer to *Note 27 – Employee deferred compensation in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010*.

The Group repurchases its own shares in the open market and issues new shares out of available conditional capital to satisfy obligations in connection with share-based compensation.

The following tables show the compensation expense for deferred compensation awards that was recognized in the consolidated statements of operations, the total shares delivered, the estimated unrecognized compensation expenses for deferred compensation awards granted in 1Q11 and prior periods outstanding as of 1Q11 and the remaining requisite service period over which the unrecognized compensation expense will be recognized. The estimated unrecognized compensation expense was based on the fair value of each award on the date of grant and included the current estimated outcome of relevant performance criteria and estimated future forfeitures but no estimate for future mark-to-market adjustments.

### Deferred compensation expense

Aggregate remaining weighted-average requisite service period	1.6

### Share-based awards

Share-based awards were granted in January 2011 as part of the 2010 deferred compensation. These awards replace other plans introduced in prior years, including Scaled Incentive Share Units (SISUs), Incentive Share Units (ISUs) and the Performance Incentive Plan (PIP). Each share-based award granted entitles the holder of the award to receive one Group share. One quarter of the share awards vest on each of the four anniversaries of the date of grant. The value that is delivered is equal to the Group share price at the time of delivery, as the share-based awards do not contain any leverage component or multiplier effect as contained in earlier awards.

The Group's share-based awards also include other awards, such as blocked shares and longevity premium awards, which were primarily used in previous years, and special awards, which may be granted to new employees. These

awards entitle the holder to receive one Group share, subject to continued employment with the Group, contain restrictive covenants and cancellation provisions and generally vest between zero and five years.

As part of the deferred compensation for 2010, the Group awarded a small population of employees in a number of EU countries 50% of the amount they otherwise would have received in unrestricted cash in the form of blocked shares in order to comply with differing European regulatory requirements. The blocked shares vested immediately upon grant, have no future service requirements and were attributed to services performed in 2010. The shares remain blocked for a period of time, which varies from six months to three years, dependent on location, after which they are subject to no restrictions.

### Share-based award activities

	1Q11		1Q10	
	Number of share-based awards in million	Weighted-average grant-date fair value in CHF	Number of share-based awards in million	Weighted-average grant-date fair value in CHF

Forfeited	(0.1)	46.24	(0.1)	62.93
<b>Balance at end of period</b>	<b>50.5</b>	<b>43.28</b>	<b>14.0</b>	<b>46.69</b>
of which vested	1.3	–	0.8	–
of which unvested	49.2	–	13.2	–

### Adjustable Performance Plan awards

The Adjustable Performance Plan is a deferred, cash-based plan for the Executive Board, managing directors and directors. The Group introduced and granted Adjustable Performance Plan awards as part of deferred compensation for 2009 (2009 Adjustable Performance Plan). The Group continued to grant Adjustable Performance Plan awards as part of deferred compensation for 2010 (2010 Adjustable Performance Plan) and amended and simplified certain features in the 2010 Adjustable Performance Plan.

The 2009 Adjustable Performance Plan awards are subject to a three-year, pro rata vesting schedule. The final value of the Adjustable Performance Plan awards paid out to individual employees may be adjusted positively or negatively from the initial amount awarded on the grant date depending on the

financial performance of the specific business areas and the Group return on equity and the value paid out each year for vested awards will reflect these adjustments.

The 2010 Adjustable Performance Plan awards are similar to the 2009 Adjustable Performance Plan awards, except the pro rata vesting will occur over a four-year period and the outstanding 2010 Adjustable Performance Plan awards will be subject to annual adjustments, increasing or decreasing the outstanding balances by a percentage equal to the Group return on equity, unless the division that granted the awards incurs a pre-tax loss. In this case, outstanding awards in that division will be subject to a negative adjustment of 15% for every CHF 1 billion of loss unless a negative Group return on equity applies for that year and is greater than the divisional adjustment.

### Restricted Cash Award

The cash component of variable compensation is generally free from conditions. However, managing directors in Investment Banking received the cash component of variable compensation in 2010 in the form of a restricted cash award with ratable vesting over a two-year period and other restrictive covenants and provisions. These cash awards were paid in 1Q11 and must be repaid by the employee, either in part or in full, if a claw-back event such as voluntary termination of employment or termination for cause occurs during the vesting period.

### Scaled Incentive Share Unit

The SISU plan is a share-based, long-term incentive plan for managing directors and directors. SISUs were granted in January 2010 as part of 2009 deferred compensation. SISUs are similar to ISUs (refer to *Incentive Share Unit* below) except with four-year vesting, subject to early retirement rules, and the leverage component contains an additional performance condition which could increase or decrease the number of any additional shares based on Group return on equity.

### Scaled Incentive Share Unit activities

	1Q11	1Q10
<b>Number of awards (million)</b>		
<b>Balance at beginning of period</b>	<b>20.4</b>	<b>–</b>
Granted	0.0	21.1
Settled	(5.1)	0.0
Forfeited	(0.1)	(0.1)
<b>Balance at end of period</b>	<b>15.2</b>	<b>21.0</b>
of which vested	0.4	–
of which unvested	14.8	21.0

### Incentive Share Unit

ISUs were the main form of share-based deferred compensation for all employees from 2006 to 2009. For 2009, ISUs were used for the deferred compensation awards granted to

employees up to and including vice presidents. An ISU is similar to a share, but offers additional upside depending on the development of the Group share price compared to predefined targets set at grant date.

### Incentive Share Unit activities

	1Q11	1Q10
<b>Number of awards (million)</b>		
<b>Balance at beginning of period</b>	<b>37.7</b>	<b>41.5</b>
Granted <sup>1</sup>	0.0	6.0
Settled	(22.8)	(8.1)
Forfeited	(0.4)	(0.1)
<b>Balance at end of period</b>	<b>14.5</b>	<b>39.3</b>
of which vested	1.5	3.0
of which unvested	13.0	36.3

<sup>1</sup> Includes ISUs granted in January and through out the year.

### Cash Retention Awards

For 2008, managing directors across all divisions, all directors in Investment Banking and, to the extent the cash component of variable compensation exceeded CHF 300,000, directors in Private Banking, Asset Management and Shared Services received deferred compensation in the form of Cash Retention

Awards (CRA). These CRA payments, which were made in 1Q09, were subject to vesting ratably over a two-year period and other conditions, and any unvested CRA had to be repaid if a claw-back event, such as voluntary termination of employment, occurred. These awards were fully vested in January 2011

### Performance Incentive Plan

As part of its annual deferred compensation process for 2004 and 2005, the Group granted PIP units during 2005 (PIP I) and 2006 (PIP II), respectively. PIP units, which were long-term retention incentive awards requiring continued employment with the Group, were subject to restrictive covenants and cancellation provisions, and vested evenly over a five-year period. Each PIP unit settled for a specified number of Group shares subsequent to the fifth anniversary of the grant date

based on the achievement of: i) earnings performance as compared to predefined targets (performance conditions); and ii) Group share price performance compared to predefined targets and relative to peers (market conditions).

The PIP II units were settled in March 2011 in accordance with the terms and conditions of the plan and each outstanding PIP unit did not have a value at settlement. This was due to the Group share price performance being below the minimum predefined target of CHF 47 per PIP II unit.

### Performance Incentive Plan activities

### Partner Asset Facility

As part of the 2008 annual compensation process, the Group granted employees in Investment Banking with a corporate title of managing director or director the majority of the deferred compensation in the form of PAF awards, denominated in US dollars. The PAF awards are indexed to, and represent a first-loss interest in, a specified pool of illiquid assets that originated in Investment Banking.

PAF awards, which have a contractual term of eight years, are fully vested. Compensation expense will be updated at

each reporting period date to reflect any change in the underlying fair value of the PAF awards until the awards are finally settled.

### Other cash awards

Other cash awards consist of voluntary deferred compensation, proprietary trading and employee investment plans. The compensation expense related to these awards was primarily driven by mark to market and performance adjustments, as the majority of the awards are fully vested.

Note 22 **Pension and other post-retirement benefits**

The Group previously disclosed that it expected to contribute CHF 525 million to the Swiss and international defined benefit plans and other post-retirement defined benefit plans in 2011.

As of the end of 1Q11, CHF 157 million of contributions have been made.

**Components of total pension costs**

## Note 23 Derivatives and hedging activities

The required disclosures for derivatives and hedging activities and related contingent credit risk will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

Derivatives are generally either privately negotiated OTC contracts or standard contracts transacted through regulated exchanges. The Group's most frequently used freestanding derivative products, entered into for trading and risk management purposes, include interest rate, credit default and cross-currency swaps, interest rate and foreign exchange options, foreign exchange forward contracts and foreign exchange and interest rate futures.

The Group also enters into contracts that are not considered derivatives in their entirety but include embedded derivative features. Such transactions primarily include issued and purchased structured debt instruments where the return may be calculated by reference to an equity security, index or third-party credit risk, or that have non-standard interest or foreign exchange terms.

On the date a derivative contract is entered into, the Group designates it as belonging to one of the following categories:

- trading activities;
- a risk management transaction that does not qualify as a hedge under accounting standards (referred to as an economic hedge);
- a hedge of the fair value of a recognized asset or liability;
- a hedge of the variability of cash flows to be received or paid relating to a recognized asset or liability or a forecasted transaction; or
- a hedge of a net investment in a foreign operation.

### Trading activities

The Group is active in most of the principal trading markets and transacts in many popular trading and hedging products. As noted above, this includes the use of swaps, futures, options and structured products, such as custom transactions using combinations of derivatives, in connection with its sales and trading activities. Trading activities include market making, positioning and arbitrage activities. The majority of the Group's derivatives were used for trading activities.

### Economic hedges

Economic hedges arise when the Group enters into derivative contracts for its own risk management purposes, but the contracts entered into do not qualify for hedge accounting under US GAAP. These economic hedges include the following types:

- interest rate derivatives to manage net interest rate risk on certain core banking business assets and liabilities;
- foreign exchange derivatives to manage foreign exchange risk on certain core banking business revenue and expense items, as well as on core banking business assets and liabilities;
- credit derivatives to manage credit risk on certain loan portfolios; and
- futures to manage risk on equity positions including convertible bonds.

Derivatives used in economic hedges are included as trading assets or trading liabilities in the consolidated balance sheets.

### Hedge accounting

#### Fair value hedges

The Group designates fair value hedges as part of an overall interest rate risk management strategy that incorporates the use of derivative instruments to minimize fluctuations in earnings that are caused by interest rate volatility. In addition to hedging changes in fair value due to interest rate risk associated with fixed rate loans, repurchase agreements and long-term debt instruments, the Group uses:

- cross-currency swaps to convert foreign-currency-denominated fixed rate assets or liabilities to floating rate functional currency assets or liabilities; and
- foreign exchange forward contracts to hedge the foreign exchange risk associated with available-for-sale securities.

#### Cash flow hedges

The Group designates cash flow hedges as part of its strategy to mitigate its risk to variability of cash flows on loans, deposits and other debt obligations by using interest rate swaps to convert variable rate assets or liabilities to fixed rates. The Group also uses cross-currency swaps to convert foreign-currency-denominated fixed and floating rate assets or liabilities to fixed rate assets or liabilities based on the currency profile that the Group elects to be exposed. This includes, but is not limited to, Swiss francs and US dollars. Further, the Group uses derivatives to hedge its cash flows associated with forecasted transactions. As of the end of 1Q11, the maximum length of time over which the Group hedged its exposure to the variability in future cash flows for forecasted transactions, excluding those forecasted transactions related to the payment of variable interest on existing financial instruments, was two months.

### Net investment hedges

The Group designates net investment hedges as part of its strategy to hedge selected net investments in foreign operations against adverse movements in foreign exchange rates, typically using forward foreign exchange contracts.

### Hedge effectiveness assessment

The Group assesses the effectiveness of hedging relationships both prospectively and retrospectively. The prospective assessment is made both at the inception of a hedging rela-

tionship and on an ongoing basis, and requires the Group to justify its expectation that the relationship will be highly effective over future periods. The retrospective assessment is also performed on an ongoing basis and requires the Group to determine whether or not the hedging relationship has actually been effective. If the Group concludes, through a retrospective evaluation, that hedge accounting is appropriate for the current period, then it measures the amount of hedge ineffectiveness to be recognized in earnings.

## Note 24 Guarantees and commitments

### Guarantees

In the ordinary course of business, guarantees are provided that contingently obligate Credit Suisse to make payments to third parties if the counterparty fails to fulfill its obligation under a borrowing or other contractual arrangement. The total

gross amount disclosed within the Guarantees table reflects the maximum potential payment under the guarantees. The carrying value represents the Group's current best estimate of payments that will be required under existing guarantee arrangements.

### Guarantees

end of	Maturity less than 1 year	Maturity greater than 1 year	Total gross amount	Total net amount <sup>1</sup>	Carrying value	Collateral received
<b>1Q11 (CHF million)</b>						
Credit guarantees and similar instruments	1,976	3,744	5,720	5,435	481	3,022
Performance guarantees and similar instruments	8,493	3,450	11,943	10,719	72	4,236
Securities lending indemnifications	18,426	0	18,426	18,426	0	18,426
Derivatives <sup>2</sup>	36,671	26,335	63,006	63,006	1,881	- <sup>3</sup>
Other guarantees	3,923	1,038	4,961	4,902	6	2,598
<b>Total guarantees</b>	<b>69,489</b>	<b>34,567</b>	<b>104,056</b>	<b>102,488</b>	<b>2,440</b>	<b>28,282</b>
<b>4Q10 (CHF million)</b>						
Credit guarantees and similar instruments	3,413	3,995	7,408	6,922	512	4,357
Performance guarantees and similar instruments	8,076	4,030	12,106	10,840	100	4,317
Securities lending indemnifications	18,254	0	18,254	18,254	0	18,254
Derivatives <sup>2</sup>	35,804	29,839	65,643	65,643	2,246	- <sup>3</sup>
Other guarantees	4,349	1,109	5,458	5,387	8	2,622
<b>Total guarantees</b>	<b>69,896</b>	<b>38,973</b>	<b>108,869</b>	<b>107,046</b>	<b>2,866</b>	<b>29,550</b>

<sup>1</sup> Total net amount is computed as the gross amount less any participations. <sup>2</sup> Excludes derivative contracts with certain active commercial and investment banks and certain other counterparties, as such contracts can be cash settled and the Group had no basis to conclude it was probable that the counterparties held, at inception, the underlying instruments. <sup>3</sup> Collateral for derivatives accounted for as guarantees is not considered significant.

### Credit guarantees and similar instruments

Credit guarantees and similar instruments are contracts that require the Group to make payments should a third party fail to do so under a specified existing credit obligation. The position includes standby letters of credit, commercial and resi-

dential mortgage guarantees and other guarantees associated with VIEs.

Standby letters of credit are made in connection with the corporate lending business and other corporate activities, where the Group provides guarantees to counterparties in the

form of standby letters of credit, which represent obligations to make payments to third parties if the counterparties fail to fulfill their obligations under a borrowing arrangement or other contractual obligation.

Commercial and residential mortgage guarantees are made in connection with the Group's commercial mortgage activities in the US, where the Group sells certain commercial and residential mortgages to the Federal National Mortgage Association (FNMA) and agrees to bear a percentage of the losses triggered by the borrowers failing to perform on the mortgage. The Group also issues guarantees that require it to reimburse the FNMA for losses on certain whole loans underlying mortgage-backed securities issued by the FNMA, which are triggered by borrowers failing to perform on the underlying mortgages.

The Group also provides guarantees to VIEs and other counterparties under which it may be required to buy assets from such entities upon the occurrence of certain triggering events such as rating downgrades and/or substantial decreases in fair value of those assets.

#### **Performance guarantees and similar instruments**

Performance guarantees and similar instruments are arrangements that require contingent payments to be made when certain performance-related targets or covenants are not met. Such covenants may include a customer's obligation to deliver certain products and services or to perform under a construction contract. Performance guarantees are frequently executed as part of project finance transactions. The position includes private equity fund guarantees and guarantees related to residential mortgage securitization activities.

For private equity fund guarantees, the Group has provided investors in private equity funds sponsored by a Group entity guarantees on potential obligations of certain general partners to return amounts previously paid as carried interest to those general partners if the performance of the remaining investments declines. To manage its exposure, the Group generally withholds a portion of carried interest distributions to cover any repayment obligations. In addition, pursuant to certain contractual arrangements, the Group is obligated to make cash payments to certain investors in certain private equity funds if specified performance thresholds are not met.

Further, as part of the Group's residential mortgage securitization activities in the US, the Group may guarantee the collection by the servicer and remittance to the securitization trust of prepayment penalties. The Group will have to perform under these guarantees in the event the servicer fails to remit the prepayment penalties.

#### **Securities lending indemnifications**

Securities lending indemnifications include arrangements in which the Group agreed to indemnify securities lending customers against losses incurred in the event that security borrowers do not return securities subject to the lending agreement and the collateral held is insufficient to cover the market value of the securities borrowed. As indicated in the Guarantees table, the Group was fully collateralized in respect of securities lending indemnifications.

#### **Derivatives**

Derivatives are issued in the ordinary course of business, generally in the form of written put options. Disclosures about derivative contracts are not required under US GAAP if such contracts may be cash settled and the Group has no basis to conclude it is probable that the counterparties held, at inception, the underlying instruments related to the derivative contracts. The Group has concluded that these conditions were met for certain active commercial and investment banks and certain other counterparties, and accordingly, the Group has not included such contracts as guarantees.

The Group manages its exposure to these derivatives by engaging in various hedging strategies to reduce its exposure. For some contracts, such as written interest rate caps or foreign exchange options, the maximum payout is not determinable as interest rates or exchange rates could theoretically rise without limit. For these contracts, notional amounts were disclosed in the table above in order to provide an indication of the underlying exposure. In addition, the Group carries all derivatives at fair value in the consolidated balance sheets and has considered the performance triggers and probabilities of payment when determining those fair values. It is more likely than not that written put options that are in-the-money to the counterparty will be exercised, for which the Group's exposure was limited to the fair value reflected in the table.

#### **Other guarantees**

Other guarantees include bankers' acceptances, residual value guarantees, deposit insurance, contingent considerations in business combinations, the minimum value of an investment in mutual funds or private equity funds and all other guarantees that were not allocated to one of the categories above.

Deposit-taking banks and securities dealers in Switzerland and certain other European countries are required to ensure the payout of privileged deposits in case of specified restrictions or compulsory liquidation of a deposit-taking bank. In Switzerland, deposit-taking banks and securities dealers jointly guarantee an amount of up to CHF 6 billion. Upon occurrence of a payout event triggered by a specified restriction of business imposed by FINMA or by compulsory liquidation of

another deposit taking bank, the Group's contribution will be calculated based on its share of privileged deposits in proportion to total privileged deposits. Based on FINMA's estimate for the Group's banking subsidiaries in Switzerland, the Group's share in the deposit insurance guarantee scheme for the period July 1, 2010 to June 30, 2011 is CHF 0.7 billion. These deposit insurance guarantees were reflected in other guarantees.

### **Representations and warranties on mortgages**

In connection with Investment Banking's sale of US residential mortgage loans, the Group has provided certain representations and warranties relating to the loans sold. The Group has provided these representations and warranties relating to sales of loans to: the US government-sponsored enterprises Fannie Mae and Freddie Mac (GSEs); institutional investors, primarily banks; and non-agency, or private label, securitizations. The loans sold are primarily loans that the Group has purchased from other parties. The scope of representations and warranties, if any, depends on the transaction, but can include: ownership of the mortgage loans and legal capacity to sell the loans; loan-to-value ratios and other characteristics of the property, the borrower and the loan; validity of the liens securing the loans and absence of delinquent taxes or related liens; conformity to underwriting standards and completeness of documentation; and origination in compliance with law. If it is determined that representations and warranties were breached, the Group may be required to repurchase the related loans or indemnify the investors to make them whole for losses. Whether the Group will incur a loss in connection with repurchases and make whole payments depends on: the extent claims are made; the validity of such claims (including the likelihood and ability to enforce claims); whether the Group can successfully claim against parties that sold loans to the Group and made representations and warranties to the Group; the residential real estate market, including the number of defaults; and whether the obligations of the securitization vehicles were guaranteed or insured by third parties.

Representations and warranties in non-agency securitizations are more limited in scope than those relating to GSE securitizations, and it can be more difficult to establish causation and standing in making a repurchase claim for breach of representations and warranties in non-agency securitizations. The Group is involved in litigation relating to its non-agency securitization activities.

Additional information on representations and warranties on mortgages will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

### **Disposal-related contingencies and other indemnifications**

The Group has certain guarantees for which its maximum contingent liability cannot be quantified. These guarantees are not reflected in the table above and are discussed below.

#### **Disposal-related contingencies**

In connection with the sale of assets or businesses, the Group sometimes provides the acquirer with certain indemnification provisions. These indemnification provisions vary by counterparty in scope and duration and depend upon the type of assets or businesses sold. They are designed to transfer the potential risk of certain unquantifiable and unknowable loss contingencies, such as litigation, tax and intellectual property matters, from the acquirer to the seller. The Group closely monitors all such contractual agreements in order to ensure that indemnification provisions are adequately provided for in the Group's consolidated financial statements.

#### **Other indemnifications**

The Group provides indemnifications to certain counterparties in connection with its normal operating activities, for which it is not possible to estimate the maximum amount that it could be obligated to pay. As a normal part of issuing its own securities, the Group typically agrees to reimburse holders for additional tax-withholding charges or assessments resulting from changes in applicable tax laws or the interpretation of those laws. Securities that include these agreements to pay additional amounts generally also include a related redemption or call provision if the obligation to pay the additional amounts results from a change in law or its interpretation and the obligation cannot be avoided by the issuer taking reasonable steps to avoid the payment of additional amounts. Since such potential obligations are dependent on future changes in tax laws, the related liabilities the Group may incur as a result of such changes cannot be reasonably estimated. In light of the related call provisions typically included, the Group does not expect any potential liabilities in respect of tax gross-ups to be material.

The Group is a member of numerous securities exchanges and clearing houses and may, as a result of its membership arrangements, be required to perform if another member defaults. The Group has determined that it is not possible to estimate the maximum amount of these obligations and believes that any potential requirement to make payments under these arrangements is remote.

## Other commitments

end of	Maturity less than 1 year	Maturity greater than 1 year	Total gross amount	Total net amount <sup>1</sup>	Collateral received
<b>1Q11 (CHF million)</b>					
Irrevocable commitments under documentary credits	4,495	27	4,522	4,242	1,780
Loan commitments	158,104	59,696	217,800 <sup>2</sup>	212,169	139,433
Forward reverse repurchase agreements	46,958	0	46,958	46,958	46,958
Other commitments	2,066	2,886	4,952	4,952	25
<b>Total other commitments</b>	<b>211,623</b>	<b>62,609</b>	<b>274,232</b>	<b>268,321</b>	<b>188,196</b>
<b>4Q10 (CHF million)</b>					
Irrevocable commitments under documentary credits	4,500	51	4,551	4,162	1,883
Loan commitments	153,759	55,794	209,553 <sup>2</sup>	202,999	142,425
Forward reverse repurchase agreements	51,968	0	51,968	51,968	51,968
Other commitments	1,375	2,485	3,860	3,860	55
<b>Total other commitments</b>	<b>211,602</b>	<b>58,330</b>	<b>269,932</b>	<b>262,989</b>	<b>196,331</b>

<sup>1</sup> Total net amount is computed as the gross amount less any participations. <sup>2</sup> Includes CHF 136,646 million and CHF 136,533 million of unused credit limits which were revocable at our sole discretion upon notice to the client at the end of 1Q11 and 4Q10, respectively.

### Irrevocable commitments under documentary credits

Irrevocable commitments under documentary credits include exposures from trade finance related to commercial letters of credit under which the Group guarantees payments to exporters against presentation of shipping and other documents.

### Loan commitments

Loan commitments include unused credit facilities that can be revoked at our sole discretion upon notice to the client. A small portion of total loan commitments is related to the leveraged finance business. Commitments to originate mortgage loans that will be held for sale are considered derivatives for accounting purposes and are not included in this disclosure. Such commitments are reflected as derivatives in the consolidated balance sheets.

### Forward reverse repurchase agreements

Forward reverse repurchase agreements represent transactions in which the initial cash exchange of the reverse repurchase transactions takes place on specified future dates.

### Other commitments

Other commitments include private equity commitments, firm commitments in underwriting securities, commitments arising from deferred payment letters of credit and from acceptances in circulation and liabilities for calls and puts on shares and other equity instruments.

The Group has redeemable noncontrolling interests in its consolidated Brazilian subsidiary Credit Suisse Hedging-Griffo Investimentos S.A. The minority investors have the right to put their interest at a value that is based on a formula relating to the subsidiary's performance. The put is exercisable December 31, 2011 and, if exercised, would give the Group full control and ownership in the first quarter of 2012. The Group currently estimates the redemption value of the put to be BRL 1,000 million (CHF 562 million). The Group has elected to accrete the value of the payment over 2011, and the accrued portion is included in the balance of the redeemable noncontrolling interest. In addition, Credit Suisse has a call option to acquire the noncontrolling interests.

**Note 25 Transfers of financial assets and variable interest entities**

The required disclosures for transfers of financial assets and VIEs will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

In the normal course of business, the Group enters into transactions with, and makes use of, SPEs. An SPE is an entity in the form of a trust or other legal structure designed to fulfill a specific limited need of the company that organized it and are generally structured to isolate the SPE's assets from creditors of other entities, including the Group. The principal uses of SPEs are to assist the Group and its clients in securitizing financial assets and creating investment products. The Group also uses SPEs for other client-driven activity, such as to facilitate financings, and Group tax or regulatory purposes.

**Transfers of financial assets****Securitizations**

The majority of the Group's securitization activities involve mortgages and mortgage-related securities and are predominantly transacted using SPEs. In a typical securitization, the SPE purchases assets financed by proceeds received from the SPE's issuance of debt and equity instruments, certificates, CP and other notes of indebtedness. These assets and liabilities are recorded on the balance sheet of the SPE and not reflected on Group's consolidated balance sheet, unless either the Group sold the assets to the entity and the accounting requirements for sale were not met or the Group consolidates the SPE.

The Group purchases commercial and residential mortgages for the purpose of securitization and sells these mortgage loans to SPEs. These SPEs issue CMBS, RMBS and asset-backed securities (ABS) that are collateralized by the assets transferred to the SPE and that pay a return based on the returns on those assets. Investors in these mortgage-backed securities or ABS typically have recourse to the assets in the SPEs, unless a third-party guarantee has been received to further enhance the creditworthiness of the assets. The investors and the SPEs have no recourse to the Group's assets. The Group is typically an underwriter of, and makes a market in, these securities.

The Group also transacts in re-securitizations of previously issued RMBS securities. Typically, certificates issued out of an existing securitization vehicle are sold into a newly created and separate securitization vehicle. Often, these re-securitizations are initiated in order to repackage an existing security to give the investor a higher rated tranche.

The Group also purchases loans and other debt obligations from clients, which are then sold by the Group directly or indirectly to SPEs that issue collateralized debt obligations (CDOs). The Group structures, underwrites and makes a market in these CDOs. CDOs are collateralized by the assets transferred to the CDO vehicle and pay a return based on the returns on those assets. Investors typically only have recourse to the collateral of the CDO and do not have recourse to the Group's assets.

When the Group transfers assets into an SPE, it must assess whether that transfer is accounted for as a sale of the assets. Transfers of assets may not meet sale requirements if the assets have not been legally isolated from the Group and/or if the Group's continuing involvement is deemed to give it effective control over the assets. If the transfer is not deemed a sale, it is instead accounted for as a secured borrowing, with the transferred assets as collateral.

As a result of the issuance of new guidance effective January 1, 2010, the Group lost sale accounting treatment for certain asset transfers and for certain transfers of portions of assets that do not meet the definition of participating interests. The impact of this change in accounting guidance did not have a significant impact.

Gains and losses on securitization transactions depend, in part, on the carrying values of mortgages and CDOs involved in the transfer and are allocated between the assets sold and any beneficial interests retained according to the relative fair values at the date of sale.

**Other asset-based financing arrangements**

The Group also uses SPEs for other client-driven activity and for Group tax or regulatory purposes. These activities include various leveraged finance, repack and other types of structures.

Leveraged finance structures are used to assist in the syndication of certain loans held by the Group. Typically, a third-party private equity sponsor will establish a SPE which in turn will purchase a loan from the Group. The debt (loan facility) provided by the Group has recourse only to the assets held within the SPE.

Repack structures are designed to give a client collateralized exposure to specific cash flows or credit risk. Typically, the SPE structure will issue notes to the client, enter into a derivative through which the desired exposure is introduced and then collateral will be purchased from the Group.

Other types of structures in this category include life insurance structures, emerging market structures set up for financ-

ing, loan participation or loan origination purposes and other alternative structures created for the purpose of investing in venture capital-like investments.

#### **Continuing involvement in transferred financial assets**

The Group may have continuing involvement in the financial assets that are transferred to an SPE, regardless of whether the transfer was accounted for as a sale or a secured borrowing, which may take several forms, including, but not limited to, servicing, recourse and guarantee arrangements, agreements to purchase or redeem transferred assets, derivative instruments, pledges of collateral and beneficial interests in the transferred assets. Beneficial interests, which are valued at fair value, include rights to receive all or portions of specified cash inflows received by an SPE, including, but not limited to, senior and subordinated shares of interest, principal, or other cash inflows to be “passed through” or “paid through”, premiums due to guarantors, CP obligations, and residual interests, whether in the form of debt or equity.

The Group’s exposure resulting from continuing involvement in transferred financial assets is generally limited to beneficial interests typically held by the Group in the form of instruments issued by SPEs that are senior, subordinated or residual tranches. These instruments are held by the Group typically in connection with underwriting or market-making activities and are included in trading assets in the consolidated balance sheets. Any changes in the fair value of these beneficial interests are recognized in the consolidated statements of operations.

Investors usually have recourse to the assets in the SPE and often benefit from other credit enhancements, such as collateral accounts, or from liquidity facilities, such as lines of credit or liquidity put option of asset purchase agreements. The SPE may also enter into a derivative contract in order to convert the yield or currency of the underlying assets to match the needs of the SPE investors, or to limit or change the credit risk of the SPE. The Group may be the provider of certain credit enhancements as well as the counterparty to any related derivative contract.

#### **Fair value of beneficial interests**

The fair value measurement of the beneficial interests held at the time of transfer and as of the reporting date that result from any continuing involvement are determined using fair value estimation techniques, such as the present value of estimated future cash flows that incorporate assumptions that market participants customarily use in these valuation techniques. The fair value of the assets or liabilities that result from any continuing involvement does not include any benefits

from financial instruments that the Group may utilize to hedge the inherent risks.

#### **Variable interest entities**

As a normal part of its business, the Group engages in various transactions that include entities that are considered VIEs and are broadly grouped into three primary categories: CDOs, CP conduits and financial intermediation. VIEs are SPEs that typically either lack sufficient equity to finance their activities without additional subordinated financial support or are structured such that the holders of the voting rights do not substantively participate in the gains and losses of the entity. VIEs may be sponsored by the Group, unrelated third parties or clients. Such entities are required to be assessed for consolidation, compelling the primary beneficiary to consolidate the VIE. As a result of the issuance of new guidance, the FASB changed the method of analyzing whether to consolidate the VIE. The model now requires an entity to determine whether it has the power to direct the activities that most significantly affect the economics of the VIE as well as whether the reporting entity has potentially significant benefits or losses in the VIE. This is in contrast to the previous consolidation model for VIEs, which only considered whether an entity absorbed the majority of the risk and/or rewards of the VIE. In addition, the primary beneficiary must be re-evaluated on an on-going basis, whereas previously reconsideration of the primary beneficiary was only required when specified reconsideration events occurred.

Consequently, the Group consolidated certain VIEs and former qualified SPEs with which it had involvement. The Group elected the fair value option upon transition for all of the financial assets and liabilities of the VIEs and former qualified SPEs. For further information on the fair value option, refer to *Note 26 – Financial instruments*.

Application of the requirements for consolidation of VIEs may require the exercise of significant management judgment. In the event consolidation of a VIE is required, the exposure to the Group is limited to that portion of the VIE’s assets attributable to any variable interest held by the Group prior to any risk management activities to hedge the Group’s net exposure. Any interests held in the VIE by third parties, even though consolidated by the Group, will not typically impact its results of operations.

Transactions with VIEs are generally executed to facilitate securitization activities or to meet specific client needs, such as providing liquidity or investing opportunities, and, as part of these activities, the Group may hold interests in the VIEs. Securitization-related transactions with VIEs involve selling or purchasing assets as well as possibly entering into related derivatives with those VIEs, providing liquidity, credit or other

support. Other transactions with VIEs include derivative transactions in the Group's capacity as the prime broker. The Group also enters into lending arrangements with VIEs for the purpose of financing projects or the acquisition of assets. Typically, the VIE's assets are restricted in nature in that they are held primarily to satisfy the obligations of the entity. Further, the Group is involved with VIEs which were formed for the purpose of offering alternative investment solutions to clients. Such VIEs relate primarily to private equity investments, fund-linked vehicles or funds of funds, where the Group acts as structurer, manager, distributor, broker, market maker or liquidity provider.

As a consequence of these activities, the Group holds variable interests in VIEs. Such variable interests consist of financial instruments issued by VIEs and which are held by the Group, certain derivatives with VIEs or loans to VIEs. Guarantees issued by the Group to or on behalf of VIEs may also qualify as variable interests. For such guarantees, including derivatives that act as guarantees, the notional amount of the respective guarantees are provided to represent the exposure. In general, investors in consolidated VIEs do not have recourse to the Group in the event of a default, except where a guarantee was provided to the investors or where the Group is the counterparty to a derivative transaction involving VIEs.

The amounts shown as total assets of consolidated and non-consolidated VIEs for which the Group has involvement represent the total assets of the VIEs even though the Group's involvement may be significantly less due to interests held by third-party investors. The asset balances for non-consolidated VIEs where the Group has significant involvement represent the most current information available to the Group regarding the remaining principal balance of assets owned. In most cases, the asset balances represent an amortized cost basis without regards to impairments in fair value, unless fair value information is readily available.

The Group's maximum exposure to loss is different from the carrying value of the assets of the VIE. This maximum exposure to loss consists of the carrying value of the Group variable interests held as trading assets, derivatives and loans and the notional amount of guarantees to VIEs, rather than the amount of total assets of the VIEs. The maximum exposure to loss does not reflect the Group's risk management activities, including effects from financial instruments that the Group may utilize to economically hedge the risks inherent in these VIEs. The economic risks associated with VIE exposures held by the Group, together with all relevant risk mitigation initiatives, are included in the Group's risk management framework.

Except as described below, the Group has not provided financial or other support to consolidated or non-consolidated VIEs that it was not contractually required to provide.

#### Collateralized debt obligations

The Group engages in CDO transactions to meet client and investor needs, earn fees and sell financial assets. The Group may act as underwriter, placement agent or asset manager and may warehouse assets prior to the closing of a transaction. As part of its structured finance business, the Group purchases loans and other debt obligations from and on behalf of clients for the purpose of securitization. The loans and other debt obligations are sold to VIEs, which in turn issue CDOs to fund the purchase of assets such as investment grade and high yield corporate debt instruments.

Typically, the collateral manager in a managed CDO is deemed to be the entity that has the power to direct the activities that most affect the economics of the entity. In a static CDO this "power" role is more difficult to analyze and may be the sponsor of the entity or the CDS counterparty.

CDOs provide credit risk exposure to a portfolio of ABS (cash CDOs) or a reference portfolio of securities (synthetic CDOs). Cash CDO transactions hold actual securities whereas synthetic CDO transactions use CDS to exchange the underlying credit risk instead of using cash assets. The Group may also act as a derivative counterparty to the VIEs, which are typically not variable interests, and may invest in portions of the notes or equity issued by the VIEs. The CDO entities may have actively managed portfolios or static portfolios.

The securities issued by these VIEs are payable solely from the cash flows of the related collateral, and third-party creditors of these VIEs do not have recourse to the Group in the event of default.

The Group's exposure in CDO transactions is typically limited to interests retained in connection with its underwriting or market-making activities. Unless the Group has been deemed to have "power" over the entity and these interests are potentially significant, the Group is not the primary beneficiary of the vehicle and does not consolidate the entity. The Group's maximum exposure to loss does not include any effects from financial instruments used to economically hedge the risks of the VIEs.

#### Commercial paper conduit

The Group continues to act as the administrator and provider of liquidity and credit enhancement facilities for one asset-backed CP conduit, Alpine, a client-focused multi-seller conduit vehicle. Alpine publishes portfolio and asset data and submits its portfolio to a rating agency for public ratings based on the cash flows of the portfolio taken as a whole. This CP con-

duit purchases assets, primarily loans and receivables, from clients and finances such purchases through the issuance of CP backed by these assets. For an asset to qualify for acquisition by the CP conduit, it must be rated at least investment grade after giving effect to the related asset-specific credit enhancement primarily provided by the client seller of the asset. The clients provide credit support to investors of the CP conduit in the form of over-collateralization and other asset-specific enhancements. Further, an unaffiliated investor retains a limited first-loss position in Alpine's entire portfolio. The Group does not have any ownership interest in Alpine. However, the Group, as administrator and liquidity and credit enhancement facilities provider, has significant exposure and power over the activities of Alpine. Effective January 1, 2010, the Group was deemed the primary beneficiary of Alpine and consolidated it in accordance with the new guidance. For further information, refer to *Note 2 – Recently issued accounting standards in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010*.

The overall average maturity of the conduit's outstanding CP was approximately 20 days and 12 days as of 1Q11 and 4Q10, respectively. As of 1Q11 and 4Q10, Alpine had the highest short-term ratings from Fitch, Moody's and Dominion Bond Rating Service and was rated A-1 by Standard & Poors. The majority of Alpine's purchased assets were highly rated loans or receivables in the consumer sector, including auto loans or leases, credit card receivables and student loans. As of 1Q11 and 4Q10, those assets had an average rating of AA, based on the lowest of each asset's external or internal rating, and an average maturity of 3.1 years and 3.5 years as of 1Q11 and 4Q10, respectively.

The Group's commitment to this CP conduit consists of obligations under liquidity agreements and a program-wide credit enhancement agreement. The liquidity agreements are asset-specific arrangements, which require the Group to purchase assets from the CP conduit in certain circumstances, including a lack of liquidity in the CP market such that the CP conduit cannot refinance its obligations or, in some cases, a default of an underlying asset. The Group may, at its discretion, purchase assets that fall below investment grade in order to support the CP conduit. In both circumstances, the asset-specific credit enhancements provided by the client seller of the assets and the first-loss investor's respective exposures to those assets remain unchanged. In entering into such agreements, the Group reviews the credit risk associated with these transactions on the same basis that would apply to other extensions of credit. The program-wide credit enhancement agreement with the CP conduit would absorb potential defaults of the assets, but is senior to the credit protection

provided by the client seller of assets and the first-loss investor.

The Group believes that the likelihood of incurring a loss equal to the maximum exposure is remote because the assets held by the CP conduit, after giving effect to related asset-specific credit enhancement primarily provided by the clients, are classified as investment grade. The Group's economic risks associated with the purchased assets of the CP conduit are included in the Group's risk management framework including counterparty, economic capital and scenario analysis.

#### Financial intermediation

The Group has significant involvement with VIEs in its role as a financial intermediary on behalf of clients.

The Group considers the likelihood of incurring a loss equal to the maximum exposure to be remote because of the Group's risk mitigation efforts, including, but not limited to, economic hedging strategies and collateral arrangements. The Group's economic risks associated with consolidated and non-consolidated VIE exposures arising from financial intermediation, together with all relevant risk mitigation initiatives, are included in the Group's risk management framework.

Financial intermediation consists of securitizations, funds, loans and other vehicles.

#### Securitizations

Securitizations are primarily CMBS, RMBS and ABS vehicles. The Group acts as an underwriter, market maker, liquidity provider, derivative counterparty and/or provider of credit enhancements to VIEs related to certain securitization transactions.

The maximum exposure to loss is the carrying value of the loan securities and derivative positions that are variable interests, if any, plus the exposure arising from any credit enhancements the Group provided. The Group's maximum exposure to loss does not include any effects from financial instruments used to economically hedge the risks of the VIEs.

Typically, the servicer of the assets in the VIE will be deemed to have the power that most significantly affects the economics of the entity. When a servicer or its related party also has an economic interest that has the potential to absorb a significant portion of the gains and/or losses, it will be deemed the primary beneficiary and consolidate the vehicle. The Group typically consolidates securitization vehicles when it is the servicer and has holdings stemming from its role as underwriter. Short-term market making holdings in vehicles are not typically considered to be potentially significant for the purposes of this assessment.

### Funds

Funds include investment structures such as mutual funds, funds of funds, private equity funds and fund-linked products where the investors' interest is typically in the form of debt rather than equity, thereby making them VIEs. The Group may have various relationships with such VIEs in the form of structurer, investment advisor, investment manager, administrator, custodian, underwriter, placement agent, market maker and/or as prime broker. These activities include the use of VIEs in structuring fund-linked products, hedge funds of funds or private equity investments to provide clients with investment opportunities in alternative investments. In such transactions, a VIE holds underlying investments and issues securities that provide the investors with a return based on the performance of those investments.

The maximum exposure to loss consists of the fair value of instruments issued by such structures that are held by the Group as a result of underwriting or market-making activities, financing provided to the vehicles and the Group's exposure resulting from principal protection and redemptions features. The investors typically retain the risk of loss on such transactions, but for certain fund types, the Group may provide principal protection on the securities to limit the investors' exposure to downside market risk. The Group's maximum exposure to loss does not include any effects from financial instruments used to economically hedge the risk of the VIEs.

Funds have been deferred from the application of the recent FASB guidance. Rather than the revised consolidation model which incorporated power and the potential to absorb significant risk and rewards, the previous consolidation model was used which resulted in the Group being the primary beneficiary and consolidating the funds if it held more than 50% of their outstanding issuances.

The Group repositioned certain of its money market funds by purchasing securities from those funds with the intent to eliminate structured investment vehicle, ABS, CDO and US subprime exposure. The securities transactions were executed in order to address liquidity concerns caused by the US market's challenging conditions. The Group had no legal obligation to purchase these securities.

### Loans

Loans are single-financing vehicles where the Group provides financing for specified assets or business ventures and the respective owner of the assets or manager of the businesses provides the equity in the vehicle. These tailored lending arrangements are established to purchase, lease or otherwise finance and manage clients' assets.

The maximum exposure to loss is the carrying value of the Group's loan exposure, which is subject to the same credit risk management procedures as loans issued directly to clients. The clients' creditworthiness is carefully reviewed, loan-to-value ratios are strictly set and, in addition, clients provide equity, additional collateral or guarantees, all of which significantly reduce the Group's exposure. The Group considers the likelihood of incurring a loss equal to the maximum exposure to be remote because of the Group's risk mitigation efforts which includes over-collateralization and effective monitoring to ensure that a sufficient loan-to-value ratio is maintained.

The third-party sponsor of the VIE will typically have control over the assets during the life structure and have the potential to absorb significant gains and losses; The Group is typically not the primary beneficiary of these structures and will not have to consolidate them. However, a change in the structure, such as a default of the sponsor, may result in the Group gaining control over the assets. If the Group's lending is significant, it may then be required to consolidate the entity.

### Other

Other includes additional vehicles where the Group provides financing and trust preferred issuance vehicles. Trust preferred issuance vehicles are utilized to assist the Group in raising capital efficient financing. The VIE issues preference shares which are guaranteed by the Group and uses the proceeds to purchase the debt of the Group. The Group's guarantee of its own debt is not considered a variable interest and, as it has no holdings in these vehicles, the Group has no maximum exposure to loss. Non-consolidated VIEs include only the total assets of trust preferred issuance vehicles, as the Group has no variable interests with these entities.

**Concentrations of credit risk**

Credit risk concentrations arise when a number of counterparties are engaged in similar business activities, are located in the same geographic region or when there are similar economic features that would cause their ability to meet contractual obligations to be similarly impacted by changes in economic conditions.

The Group regularly monitors the credit risk portfolio by counterparties, industry, country and products to ensure that such potential concentrations are identified, using a comprehensive range of quantitative tools and metrics. Credit limits relating to counterparties and products are managed through counterparty limits which set the maximum credit exposures the Group is willing to assume to specific counterparties over specified periods. Country limits are established to avoid any undue country risk concentration.

From an industry point of view, the combined credit exposure of the Group is diversified. A large portion of the credit exposure is with individual clients, particularly through residential mortgages in Switzerland, or relates to transactions with financial institutions. In both cases, the customer base is extensive and the number and variety of transactions are broad. For transactions with financial institutions, the business is also geographically diverse, with operations focused in the Americas, Europe and, to a lesser extent, Asia Pacific.

**Fair value of financial instruments**

The required disclosures for the fair value of financial instruments will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

The fair value of the majority of the Group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain CP, most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the Group holds financial instruments for which no prices are available and which have little or no observable inputs. Further deterioration of financial markets could significantly impact the value of these financial instruments and the results of operations. For these instruments, the determination of fair value requires subjective assessment and varying degrees of judgment, depending on liquidity, concentration, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In

such circumstances, valuation is determined based on management's own assumptions about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, most mortgage-related and CDO securities, certain equity derivatives and equity-linked securities, private equity investments, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high-grade bonds, and life insurance instruments.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments. The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments) is considered when measuring the fair value of assets and the impact of changes in the Group's own credit spreads (known as DVA) is considered when measuring the fair value of its liabilities. For OTC derivatives, the impact of changes in both the Group's and the counterparty's credit standing is considered when measuring their fair value, based on current CDS prices. The adjustments also take into account contractual factors designed to reduce the Group's credit exposure to a counterparty, such as collateral held and master netting agreements. For hybrid debt instruments with embedded derivative features, the impact of changes in the Group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

The Group has availed itself of the simplification in accounting offered under the fair value option, primarily in the Investment Banking and Asset Management segments. This has been accomplished generally by electing the fair value option, both at initial adoption and for subsequent transactions, on items impacted by the hedge accounting requirements of US GAAP. That is, for instruments for which there was an inability to achieve hedge accounting and for which we are economically hedged, we have elected the fair value option. Likewise, where we manage an activity on a fair value basis but previously have been unable to achieve fair value accounting, we have utilized the fair value option to align our risk management reporting to our financial accounting.

**Fair value hierarchy**

The levels of the fair value hierarchy are defined as follows:

- Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities that the Group has the ability to access. This level of the fair value hierarchy provides the most reliable evidence of fair value and is used to measure fair value whenever available.
- Level 2: Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly or indirectly. These inputs include: (i) quoted prices for similar assets or liabilities in active markets; (ii) quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current or price quotations vary substantially either over time or among market makers, or in which little information is publicly available; (iii) inputs other than quoted prices that are observable for the asset or liability; or (iv) inputs that are derived principally from or corroborated by observable market data by correlation or other means.
- Level 3: Inputs that are unobservable for the asset or liability. These inputs reflect the Group's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These inputs are developed based on the best information available in the circumstances, which include the Group's own data. The Group's own data used to develop unobservable inputs is adjusted if information indicates that market participants would use different assumptions.

### Qualitative disclosures of valuation techniques

#### Money market instruments

Traded money market instruments include instruments such as bankers' acceptances, certificates of deposit, CP, book claims, treasury bills and other rights, which are held for trading purposes. Valuations of money market instruments are generally based on observable inputs.

#### Securities purchased under resale agreements and securities sold under repurchase agreements

Securities purchased under resale agreements and securities sold under repurchase agreements are measured at fair value using discounted cash flow analysis. Future cash flows are discounted using observable market interest rate repurchase/resale curves for the applicable maturity and underlying collateral of the instruments. As such, the significant majority of both securities purchased under resale agreements and securities sold under repurchase agreements are included in level 2 of the fair value hierarchy. Structured resale and repurchase agreements include embedded derivatives, which are measured using the same techniques as described

below for stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships. If the value of the embedded derivative is determined using significant unobservable parameters, those structured resale and repurchase agreements are classified within level 3 of the fair value hierarchy.

Securities purchased under resale agreements are usually fully collateralized or over collateralized by government securities, money market instruments, corporate bonds, or other debt instruments. In the event of counterparty default, the collateral service agreement provides the Group with the right to liquidate the collateral held.

#### Debt securities

Government debt securities typically have quoted prices in active markets and are categorized as level 1 instruments. For debt securities for which market prices are not available, valuations are based on yields reflecting credit rating, historical performance, delinquencies, loss severity, the maturity of the security, recent transactions in the market or other modeling techniques, which may involve judgment. For those securities where the price or model inputs are observable in the market they are categorized as level 2 instruments, while those securities where prices are not observable and significant model inputs are unobservable they are categorized as level 3.

#### Corporate bonds

Corporate bonds are priced to reflect current market levels either through recent market transactions or to broker or dealer quotes.

Where a market price for the particular security is not directly available, valuations are obtained based on yields reflected by other instruments in the specific or similar entity's capital structure and adjusting for differences in seniority and maturity, benchmarking to a comparable security where market data is available (taking into consideration differences in credit, liquidity and maturity) or through the application of cash flow modeling techniques utilizing observable inputs, such as current interest rate curves and observable CDS spreads.

#### CMBS, RMBS and ABS/CDO structures

Values of RMBS, CMBS and other ABS may be available through quoted prices, which are often based on the prices at which similarly structured and collateralized securities trade between dealers and to and from customers. Values of RMBS, CMBS and other ABS for which there are no significant observable inputs are valued using benchmarks to similar transactions or indices and other valuation models.

For most structured debt securities, determination of fair value requires subjective assessment depending on liquidity,

ownership concentration, and the current economic and competitive environment. Valuation is determined based on management's own assumptions about how market participants would price the asset.

Collateralized bond and loan obligations are split into various structured tranches and each tranche is valued based upon its individual rating and the underlying collateral supporting the structure. Valuation models are used to value both cash and synthetic CDOs.

#### *Equity securities*

The majority of the Group's positions in equity securities are traded on public stock exchanges for which quoted prices are readily and regularly available and are therefore categorized as level 1 instruments. Level 2 equities include fund-linked products, convertible bonds or equity securities with restrictions and therefore are not traded in active markets.

#### *Fund-linked products*

Fund-linked products consist of investments in third-party hedge funds and funds of funds. The method of measuring fair value for these investments is the same as those described for other investments below.

#### *Convertible bonds*

Convertible bonds are generally valued using observable pricing sources. For a small minority of convertible bonds, no observable prices are available, and valuation is determined using internal and external models, for which the key inputs include stock prices, dividend rates, credit spreads (corporate and sovereign), yield curves, foreign exchange rates, prepayment rates and borrowing costs, and single stock and equity market volatility.

#### *Derivatives*

Derivatives held for trading purposes or used in hedge accounting relationships include both OTC and exchange-traded derivatives.

The fair values of exchange-traded derivatives measured using observable exchange prices are included in level 1 of the fair value hierarchy. Some observable exchange prices may not be considered executable at the reporting date and may have been adjusted for liquidity concerns. For those instruments where liquidity adjustments have been made to the exchange price, such as long-dated option contracts, the instrument has been included in level 2 of the fair value hierarchy.

The fair values of OTC derivatives are determined on the basis of either industry standard models or internally developed proprietary models. Both model types use various observable and unobservable inputs in order to determine fair

value. The inputs include those characteristics of the derivative that have a bearing on the economics of the instrument.

The determination of the fair value of many derivatives involves only a limited degree of subjectivity because the required inputs are observable in the marketplace, while more complex derivatives may use unobservable inputs that rely on specific proprietary modeling assumptions. Examples of such specific unobservable inputs include long-dated volatility assumptions on OTC option transactions and recovery rate assumptions for credit derivative transactions.

Where observable inputs (prices from exchanges, dealers, brokers or market consensus data providers) are not available, attempts are made to infer values from observable prices through model calibration (spot and forward rates, benchmark interest rate curves and volatility inputs for commonly traded option products). For inputs that cannot be derived from other sources, estimates from historical data may be made.

OTC derivatives where the majority of the value is derived from market observable inputs are categorized as level 2 instruments, while those where the majority of value is derived from unobservable inputs are categorized as level 3.

#### *Interest rate derivatives*

OTC vanilla interest rate products, such as interest rate swaps, swaptions, and caps and floors are valued by discounting the anticipated future cash flows. The future cash flows and discounting are derived from market standard yield curves and industry standard volatility inputs. Where applicable, exchange-traded prices are also used to value exchange traded futures and options and can be used in yield curve construction. For more complex products, inputs include, but are not limited to basis swap spreads, constant maturity convexity adjustments, constant maturity treasury spreads, inflation-index correlations, inflation seasonality, single and quanto interest rate correlations, cross asset correlations, mean reversion, serial correlation and conditional prepayment rate assumptions.

#### *Foreign exchange derivatives*

Foreign exchange derivatives include vanilla products such as spot, forward and option contracts where the anticipated discounted future cash flows are determined from foreign exchange forward curves and industry standard optionality modeling techniques. Where applicable, exchange traded prices are also used for futures and option prices. For more complex products inputs include, but are not limited to foreign exchange rate correlations, quanto cross asset correlations and volatility skew assumptions.

#### *Equity derivatives*

Equity derivatives include vanilla options and swaps in addition to different types of exotic options. Inputs for equity derivatives can include borrowing costs, dividend curves, equity to equity correlations, equity to foreign exchange rate correlations, single name and index volatility, fund gap risk, fund volatility, interest rate to equity correlation and yield curve.

#### *Credit derivatives*

Credit derivatives include index and single name CDS in addition to more complex structured credit products. Vanilla products are valued using industry standard models and inputs that are generally market observable including credit spreads and recovery rates.

Complex structured credit derivatives are valued using proprietary models requiring inputs such as credit spreads, recovery rates, credit volatilities, default correlations, cash/synthetic basis spreads and prepayment rate. These input parameters are generally implied from available market observable data.

#### *Commodity derivatives*

Commodity derivatives include forwards, vanilla and exotic options, swaps, swaptions, and structured transactions. Vanilla products are generally valued using industry standard models, while more complex products may use proprietary models. Commodity derivative model inputs include cross commodity correlation, foreign exchange commodity correlation, commodity forward rate curves, spot prices, commodity volatility and the yield curve. Inputs can be validated from executed trades, broker and consensus data. In other cases, historic relationships may be used to estimate model inputs.

#### *Other trading assets*

Other trading assets include cash and synthetic life finance instruments. Cash instruments include Single Premium Immediate Annuity, premium finance, and life settlement contracts at fair value, whereas synthetic instruments include longevity swaps, options and notes.

These instruments are valued using proprietary models using several inputs however; central to the calculation of fair value for life finance instruments is the estimate of mortality rates. Individual mortality rates are typically obtained by multiplying a base mortality curve for the general insured population provided by a professional actuarial organization together with an individual-specific multiplier. Individual specific multipliers are determined based on data from third-party life expectancy data providers, which examine insured individual's medical conditions, family history and other factors to arrive at a life expectancy estimate. In addition to mortality rates, discount

rates and credit spreads are also inputs into the valuation of life finance instruments.

Due to the limited observability in the market of mortality rates the vast majority of life finance instruments are categorized as level 3 instruments.

#### *Other investments*

Other investments principally includes equity investments in the form of a) direct investments in third-party hedge funds, private equity funds and funds of funds, b) equity-method investments where the Group has the ability to significantly influence the operating and financial policies of the investee, and c) direct investments in non-marketable equity securities.

Direct investments in third-party hedge funds, private equity and funds of funds are measured at fair value based on their published net asset values (NAVs). Most of these investments are classified in level 3 of the fair value hierarchy, as there are restrictions imposed upon the redemption of the funds at their NAV in the near term. In some cases, NAVs may be adjusted where there exists sufficient evidence that the NAV published by the investment manager is not current with observed market movements or there exists other circumstances that would require an adjustment to the published NAV. Significant management judgment is involved in making any adjustments to the published NAVs.

Direct investments in non-marketable equity securities consist of both real estate investments and non-real estate investments. Equity-method investments and direct investments in nonmarketable equity securities are initially measured at their transaction price, as this is the best estimate of fair value. Thereafter, these investments are individually measured at fair value based upon a number of factors that include any recent rounds of financing involving third-party investors, comparable company transactions, multiple analyses of cash flows or book values, or discounted cash flow analyses. The availability of information used in these modeling techniques is often limited and involves significant management judgment in evaluating these different factors over time. As a result, these investments are included in level 3 of the fair value hierarchy.

#### *Loans*

The Group's loan portfolio measured at fair value includes commercial loans, residential loans, corporate loans, leveraged financed loans and emerging market loans. Fair value is based on recent transactions and quoted prices, where available. Where recent transactions and quoted prices are not available, fair value may be determined by relative value benchmarking (which includes pricing based upon another position in the same capital structure, other comparable loan issues, generic industry credit spreads, implied credit spreads derived from

CDS for the specific borrower, and enterprise valuations) or calculated based on the exit price of the collateral, based on current market conditions.

Both the funded and unfunded portion of revolving credit lines, on the corporate lending portfolio, are valued using a CDS pricing model, which requires estimates of significant inputs including credit spreads, recovery rates, credit conversion factors, and weighted average life of the loan.

The Group's other assets and liabilities include mortgage loans held in conjunction with securitization activities and assets and liabilities of VIEs and mortgage securitizations that do not meet the criteria for sale treatment under US GAAP. The fair value of mortgage loans held in conjunction with securitization activities is determined on a whole-loan basis. Whole-loan valuations are calculated based on the exit price reflecting the current market conditions. The fair value of assets and liabilities of VIEs and mortgage securitizations that do not meet the criteria for sale treatment under US GAAP is determined based on the quoted prices for securitized bonds, where available, or on cash flow analyses for securitized bonds, when quoted prices are not available.

#### Short-term borrowings and long-term debt

The Group's short-term borrowings and long-term debt include structured notes (hybrid financial instruments that are both bifurcable and non-bifurcable) and vanilla debt.

The fair value of structured notes is based on quoted prices, where available. When quoted prices are not available, fair value is determined by using a discounted cash flow model incorporating the Group's credit spreads, the value of derivatives embedded in the debt and the residual term of the issuance based on call options. Derivatives structured into the issued debt are valued consistently with the firms' stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships as discussed above. The fair value of structured debt is heavily influenced by the combined call options and performance of the underlying derivative returns.

Vanilla debt is fair valued to the new issue market using risk-free yield curves for similar maturities and the Group's own credit spread.

#### Note 27 **Assets pledged or assigned**

---

The required disclosures for assets pledged or assigned will be included in the Financial Report 1Q11, which will be published on our website and filed with the SEC on or about May 10, 2011.

The Group received collateral in connection with resale agreements, securities lending and loans, derivative transac-

tions and margined broker loans. A substantial portion of the collateral received by the Group was sold or repledged in connection with repurchase agreements, securities sold not yet purchased, securities borrowings and loans, pledges to clearing organizations, segregation requirements under securities laws and regulations, derivative transactions and bank loans.

Note 28 **Subsidiary guarantee information**

On March 26, 2007, the Group and the Bank issued full, unconditional and several guarantees of Credit Suisse (USA), Inc.'s outstanding US SEC-registered debt securities. In accordance with the guarantees, if Credit Suisse (USA), Inc. fails to make any timely payment under the agreements governing such debt securities, the holders of the debt securities

may demand payment from either the Group or the Bank, without first proceeding against Credit Suisse (USA), Inc. The guarantee from the Group is subordinated to senior liabilities. Credit Suisse (USA), Inc. is an indirect, wholly owned subsidiary of the Group.

**Condensed consolidating statements of operations**

**Note 29 Litigation**

---

The Group is involved in a number of judicial, regulatory and arbitration proceedings concerning matters arising in connection with the conduct of its businesses. The Group's material judicial, regulatory and arbitration proceedings, related provisions and estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions are described in *Note 37 – Litigation in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2010*. Some of these actions have been brought on behalf of various classes of claimants and seek damages of material and/or indeterminate amounts.

The Group accrues litigation provisions (including fees and expenses of external lawyers and other service providers) in connection with certain judicial, regulatory and arbitration proceedings when reasonably possible losses, additional losses or ranges of loss are probable and reasonably estimable. The Group reviews its judicial, regulatory and arbitration proceedings each quarter to determine the adequacy of its litigation provisions and may increase or release provisions based on management's judgment and the advice of counsel. Further provisions or releases of litigation provisions may be necessary in the future as developments in such litigation, claims or proceedings warrant.

It is inherently difficult to determine whether a loss is probable or even reasonably possible or to estimate the amount of any loss or loss range for many of these matters. In presenting the condensed consolidated financial statements, management makes estimates regarding the outcome of these matters, records a provision and takes a charge to income when losses with respect to such matters are probable and can be reasonably estimated. Estimates, by their nature, are based

on judgment and currently available information and involve a variety of factors, including, but not limited to, the type and nature of the litigation, claim or proceeding, the progress of the matter, the advice of legal counsel, the Group's defenses and its experience in similar cases or proceedings, as well as its assessment of matters, including settlements, involving other defendants in similar or related cases or proceedings. Factual and legal determinations must be made before a loss, additional losses or ranges of loss can be reasonably estimated for any proceeding or matter.

Most matters pending against the Group seek damages of an indeterminate amount. While certain matters specify the damages claimed, such claimed amount may not represent reasonably possible losses. The Group does not believe that it can estimate an aggregate range of reasonably possible losses for certain of its proceedings because of the complexity of the proceedings, the novelty of some of the claims, the early stage of the proceedings and limited amount of discovery that has occurred and/or other factors.

In 1Q11, the Group recorded net litigation provisions of CHF 60 million, primarily in the Investment Banking segment. After taking into account its litigation provisions, the Group believes, based on currently available information and advice of counsel, that the results of its proceedings, in the aggregate, will not have a material adverse effect on the Group's financial condition. However, in light of the uncertainties involved in such proceedings, the ultimate resolution of such proceedings may exceed current litigation provisions and any excess may be material to operating results for any particular period, depending, in part, upon the operating results for such period.

### Cautionary statement regarding forward-looking information

This report contains statements that constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act. In addition, in the future we, and others on our behalf, may make statements that constitute forward-looking statements. Such forward-looking statements may include, without limitation, statements relating to the following:

- our plans, objectives or goals;
- our future economic performance or prospects;
- the potential effect on our future performance of certain contingencies; and
- assumptions underlying any such statements.

Words such as “believes,” “anticipates,” “expects,” “intends” and “plans” and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements. We do not intend to update these forward-looking statements except as may be required by applicable securities laws.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that predictions, forecasts, projections and other outcomes described or implied in forward-looking statements will not be achieved. We caution you that a number of important factors could cause results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- the ability to maintain sufficient liquidity and access capital markets;
- market and interest rate fluctuations and interest rate levels;
- the strength of the global economy in general and the strength of the economies of the countries in which we conduct our operations, in particular the risk of continued slow economic recovery in the US or other developed countries in 2011 and beyond;
- the direct and indirect impacts of continuing deterioration or slow recovery in residential and commercial real estate markets;
- adverse rating actions by credit rating agencies in respect of sovereign issuers, structured credit products or other credit-related exposures;
- the ability of counterparties to meet their obligations to us;

- the effects of, and changes in, fiscal, monetary, trade and tax policies, and currency fluctuations;
- political and social developments, including war, civil unrest or terrorist activity;
- the possibility of foreign exchange controls, expropriation, nationalization or confiscation of assets in countries in which we conduct our operations;
- operational factors such as systems failure, human error, or the failure to implement procedures properly;
- actions taken by regulators with respect to our business and practices in one or more of the countries in which we conduct our operations;
- the effects of changes in laws, regulations or accounting policies or practices;
- competition in geographic and business areas in which we conduct our operations;
- the ability to retain and recruit qualified personnel;
- the ability to maintain our reputation and promote our brand;
- the ability to increase market share and control expenses;
- technological changes;
- the timely development and acceptance of our new products and services and the perceived overall value of these products and services by users;
- acquisitions, including the ability to integrate acquired businesses successfully, and divestitures, including the ability to sell non-core assets;
- the adverse resolution of litigation and other contingencies;
- the ability to achieve our cost efficiency goals and cost targets; and
- our success at managing the risks involved in the foregoing.

We caution you that the foregoing list of important factors is not exclusive. When evaluating forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, as well as the information set forth in our Annual Report 2010 under *IX – Additional Information – Risk Factors*.
