1) GRI = Global Reporting Initiative; www.globalreporting.org
GHG-Protocol = Greenhouse Gas Protocol; www.ghgprotocol.org
distribution of scope 1 - 3 emissions, Rounded figures

2) Global greenhouse gas emissions for 2015, 2016 and 2017 are based on net emissions, taking into account the composition of electricity qualities purchased globally. In the regions EMEA, Americas and APAC additional Renewable Electricity Certificates (RECs) are purchased and accounted for. The total of Scope 1, 2 and 3 emissions contain in Scope 2 the market based mix emissions according to the GHG protocol. The total greenhouse gas emissions include 52'820 tons from purchased electricity qualities (Scope 2 Market Based Mix). Had this electricity been purchased without environmental criteria, an additional 110'000 tons of GHG emissions would have been the result, the scope 2 emissions would then have added up to 162'820 tons (Scope 2 Location Based Mix). The gross greenhouse gas emissions for the EMEA region are following the DEFRA guidelines for UK. In the course of the data collection for 2017 minor adjustments were made to 2016 basic data set. By greenhouse gas net emissions we mean the remaining emissions before offsetting for carbon neutrality.

3) The environmental data 2015 were calculated and reported according to the VfU Indicators Standard Version 2013, the 2016 and 2017 data according to the new edition VfU Indicators Standard Version 2015. In the region Switzerland, energy consumption sold to third parties has been deducted since 2016.
