# 1. Notes on Credit Suisse Message Implementation Guidelines

---

The Credit Suisse Message Implementation Guidelines for Credit Transfers serves as manual for the technical and business implementation of Credit Transfers pain.001 message in accordance with the ISO 20022 Payments Standard and the Swiss Recommendations. All Credit Transfer messages transmitted to Credit Suisse must comply with Swiss Recommendations, ISO 20022 Payments Standard and Credit Suisse specification (as adhered in this document and XSD).

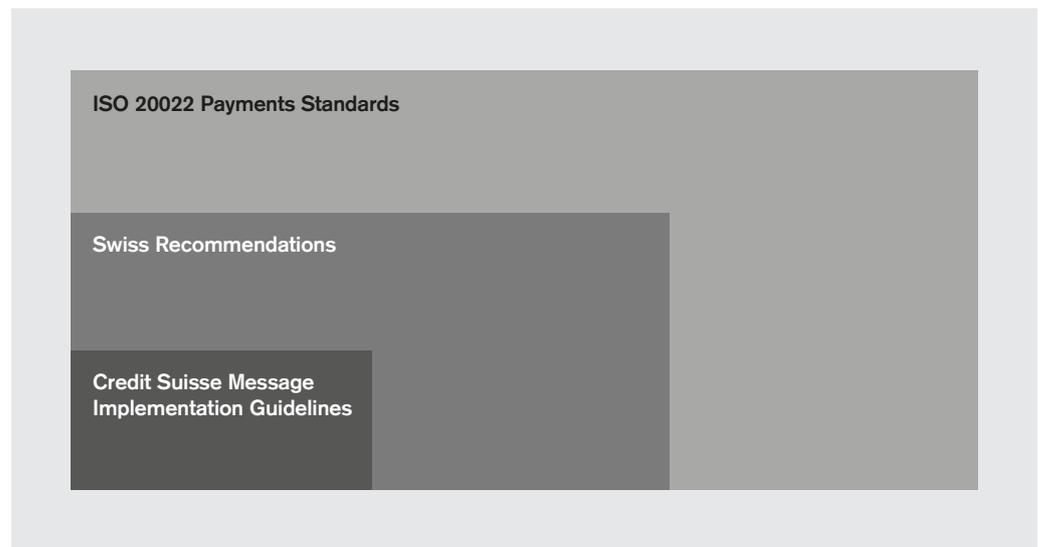

Figure 1. Above shows the degree of concordance between the ISO 20022 Payments Standards, Swiss Recommendations and Credit Suisse Implementations.

This document provides additional information to the Credit Suisse XML schema definition (XSD) and cannot be read as a stand-alone specification.

## 1.1

### Conventions for presentation

A basic knowledge of XML is assumed for the purposes of this document, so only certain special points are explained. The technical validation of the various XML messages is carried out using XML schema.

In this document, the following conventions apply to presentation.

#### Representation of the tree structure in the tables

So that it is possible to tell where in the tree structure an element comes, the hierarchy level is indicated by preceding “+” signs in the Message Item. For example, the IBAN in the Payment Information is represented as shown:

```
CstmrCdtTrfInittn {Or  
+PmtInf  
++CdtTrfTxInf  
+++CdtrAcct  
++++Id  
+++++IBAN
```

The rows marked in light grey indicate the XML elements containing at least one sub-element.

### Representation of choices

Elements with a choice are marked in the “XML Tag” column as follows:

{**Or** for start of the choice

**Or**} for end of the choice

The technical specifications contain information from ISO 20022, such as Name, Index, Cardinality (Presence/Multiplicity), Message Item, XML-Tag, ISODefinition (Definition).

The following information for the Swiss ISO 20022 Payments Standards can also be found in the specifications:

- **CH definition** – Corresponding to Swiss Implementation Guidelines field “General definition”
- **CH Rules** – Definitions for specific payment types as per Swiss Recommendations definition
- **Credit Suisse** – Credit Suisse remark. It includes additional explanation or/and Credit Suisse specific rule description
- **RsnCd and Addtlnf** – some XML elements are being provided with error example, that is code and the corresponding Additional Information, which are being sent in pain.002 Status Reason Information e.g. RsnCd: CH16; Addtlnf: Initiating Party Name may not exceed 70 characters
- **Example** – Credit Suisse example e.g. <Nm>Max Muster</Nm>
- **CH Status** – Information about usage in Switzerland. The following statuses are permitted for individual XML elements according to the Swiss Implementation Guidelines Version 1.7.

### M – Mandatory

The element is mandatory. If the element is not used, a Swiss bank will refuse to process the message.

### BD – Bilaterally Determined

The element may only be used by agreement with the instructed financial institution.

### O – Optional

The element is optional.

### D – Dependent

The use of the element depends on other elements.

### R – Recommended

The use of the element is recommended.

- **Data type** – The names of the data types given in the tables of this document correspond to the data types defined in XML schemas e.g. Data Type: ISODateTime
- **Length** – In some cases min and max length is indicated e.g. 1.. 70
- **ErrorCode** – list of possible error codes that are being sent back in the Customer Payment Status Report (pain.002) e.g. ErrorCode: CH16, CH17, CH21  
Note: If during schema validation an error is detected in any element, the whole message can be rejected (error code FF01). Since this response generally applies to all elements in the table, a comment to that effect is not entered for every element.

# 2. Technical specifications

level	message item	description	
A	CstmrCdtTrfInitn cardinality: 1..1	<b>name:</b> XML tag: Data type: ISO definition:	<b>Customer Credit Transfer Initiation V03</b> CstmrCdtTrfInitn CustomerCreditTransferInitiationV03 The CustomerCreditTransferInitiation message is sent by the initiating party to the forwarding agent or debtor's agent. It is used to request movement of funds from debtor's account to a creditor.
A	CstmrCdtTrfInitn +GrpHdr cardinality: 1..1 CH Status: M	<b>name:</b> XML tag: Data type: ISO definition: CH definition:	<b>Group Header</b> GrpHdr GroupHeader32 Set of characteristics shared by all individual transactions included in the message. Value must be unique within the whole message (is used as reference in the Status Report pain.002). Only the SWIFT character set is permitted for this element.
A	CstmrCdtTrfInitn +GrpHdr ++Msgld cardinality: 1..1 ErrorCode: DU01, CH16, CH21 CH Status: M	<b>name:</b> XML tag: Data type: length: ISO definition: CH definition:  <b>Credit Suisse:</b> <b>example:</b>	<b>Message Identification</b> Msgld Max35Text 1 35 Point to point reference, as assigned by the instructing party, and sent to the next party in the chain to unambiguously identify the message. Usage: The instructing party has to make sure that MessageIdentification is unique per instructed party for a pre-agreed period. CH definition: Checking for duplicates usually takes place at the Swiss financial institutions at document (message) level. This is why the "Message Identification" <Msgld> element must have a unique value. The uniqueness is checked by most of the financial institutions over a period of at least 90 days. It is recommended that the "Message Identification" is generally kept unique for as long as possible. Only the SWIFT character set is permitted for this element. If Message Identification is not unique the whole pain.001 would be rejected. <Msgld>MSGID-9214-170502115114-00</Msgld>
A	CstmrCdtTrfInitn +GrpHdr ++CreDtTm cardinality: 1..1 ErrorCode: CH21, FF01 CH Status: M	<b>name:</b> XML tag: Data type: ISO definition: CH definition:  <b>Credit Suisse:</b> <b>example:</b> RsnCd: AddtlInf:	<b>Creation Date Time</b> CreDtTm ISODatetime Date and time at which the message was created. CH definition: Recommendation: Should be the same as the actual date/time of creation. If the date is invalid format, the whole file will be rejected with Status Reason Code FF01. <CreDtTm>2016-08-01T00:00:00</CreDtTm> CH21 Creation Date Time is mandatory
A	CstmrCdtTrfInitn +GrpHdr ++NbOfTxS cardinality: 1..1 ErrorCode: AM18, FF01, CH21 CH Status: M	<b>name:</b> XML tag: Data type: pattern: ISO definition: CH definition:  <b>Credit Suisse:</b> <b>example:</b> RsnCd: AddtlInf: RsnCd: AddtlInf: RsnCd: AddtlInf:	<b>Number Of Transactions</b> NbOfTxS Max15NumericText [0-9]{1,15} Number of individual transactions contained in the message. CH definition: If there is an error, the whole message is rejected. Messages that exceed 99,999 payments (C-Level) will be rejected by the financial institutions. Depending on the financial institution, the size of the message that can be delivered may be smaller. If the content of this element does not match the total number of C-Levels the file will be rejected with Status Reason Code AM18. <NbOfTxS>10</NbOfTxS> AM18 Number of transactions <x> does not match the calculated number of transactions <y> FF01 There is no transaction present in the message. CH21 Number of transactions is mandatory.

level	message item	description	
B	CstmrCdtTrfIntrn +PmtInf ++PmtMtd cardinality: 1..1 ErrorCodes: FF01, NARR, CH21 CH Status: M	<b>name:</b>	<b>Payment Method</b>
		XML tag:	PmtMtd
		Data type:	PaymentMethod3Code
		ISO definition:	Specifies the means of payment that will be used to move the amount of money.
		CH definition:	"TRA" and "TRF": same meaning, no effect on the way the debit advices are controlled. In Switzerland the "TRA" value is processed in the same way as the "TRF" value, it has no special function. Furthermore, for check payments and payment instructions (postal mandates), the "CHK" value is permitted.
		CH rules:	Type 1, 2.1, 2.2, 3, 4, 5, 6: May only contain "TRA" or "TRF". Type 8: May only contain "CHK".
		<b>Credit Suisse:</b>	Domestic CHF postal orders (Payment Type 7) are not supported (Status Reason Code: NARR).
		<b>example:</b>	<PmtMtd>TRF</PmtMtd>
		RsnCd:	FF01
		AddtlInf:	Allowed values of Payment Method are "TRF", "TRA", "CHK"
		RsnCd:	NARR
		AddtlInf:	Payment Type 7 is not anymore supported.
		RsnCd:	CH21
		AddtlInf:	Payment Method is mandatory

**B** CstmrCdtTrflnitr  
+PmtInf  
++BtchBookg  
cardinality: 0..1  
ErrorCode: FF01  
CH Status: 0

**name: Batch Booking**

XML tag: BtchBookg  
Data type: BatchBookingIndicator

ISO definition: Identifies whether a single entry per individual transaction or a batch entry for the sum of the amounts of all transactions within the group of a message is requested.  
Usage: Batch booking is used to request and not order a possible batch booking.

CH definition: The option "true" is recommended. "true": Wherever possible, one batch booking is made per "Payment Information" (B). A separate B-level must be created for each currency being transferred. Mixed B-levels may only be used as AOS by agreement with the financial institution, grouped according to currency and sometimes other criteria (e.g. charging options), The booking is identified using the Payment Information Identification (B). "false": One booking should be made for each "Credit Transfer Transaction Information" (C). Bookings are usually identified by the "Payment Identification" (C). Alternatively, the financial institution can also identify the booking using, for example, the "Payment Information Identification" (B) element. The option "true" in combination with Category Purpose Code (B-Level) SALA and notification instruction CND/NOA results in a confidential payment. If this element is not sent, then the booking proceeds as for "true" or according to the master data stored at the financial institution.

**Credit Suisse:** A separate B-level must be created for each currency being transferred. Mixing "Instructed Amount" with "Equivalent Amount" is not allowed within one B-level.

Only 4 values are allowed for Batch Booking element: '0', '1', 'true', 'false', as per XSD definition (boolean data type). When any other value is provided (e.g. <BtchBookg>TRUE</BtchBookg> or <BtchBookg></BtchBookg>) - the whole B-Level will be rejected with the Status Reason Code FF01.

If the element is not present the default setting of "true" will be applied during processing.

Credit Suisse will always display transaction details for collective debit bookings in "camt.053 with details", unless special advice steering is provided in pain.001 (DebtorAccount/Proprietary = NOA or CND).

Credit Suisse will only display transaction details for collective debit bookings in "camt.053 without details", when special advice steering is provided in pain.001 (DebtorAccount/Proprietary = CWD).

Effect on setting values for <BtchBookg> and <Prtry> (CstmrCdtTrflnitr/PmtInf/DbtrAcct/Tp/Prtry):

<b>BtchBookg</b>	<b>Prtry</b>	<b>Booking</b>	<b>camt.053 with details</b>	<b>camt.053 without details</b>	<b>camt.052</b>
true / not provided	NOA	Batch	No Details	No Details	No Details
true / not provided <sup>1</sup>	SIA <sup>1</sup>	Batch	With Details	No Details	With Details
true / not provided <sup>2</sup>	CND <sup>2</sup>	Batch	No Details	No Details	No Details
true / not provided	CWD	Batch	With Details	With Details	With Details
true / not provided	not provided	Batch	With Details	No Details	With Details
false	NOA	Single	With Details	With Details	With Details
false	SIA	Single	With Details	With Details	With Details
false <sup>1</sup>	CND <sup>1</sup>	Single	With Details	With Details	With Details
false <sup>1</sup>	CWD <sup>1</sup>	Single	With Details	With Details	With Details
false	not provided	Single	With Details	With Details	With Details

<sup>1</sup> The combination should not be used and is not recommended by Credit Suisse

<sup>2</sup> The combination is recommended for salary payments

**example:** <BtchBookg>true</BtchBookg>  
<BtchBookg>>false</BtchBookg>  
<BtchBookg>1</BtchBookg>  
<BtchBookg>0</BtchBookg>

RsnCd: FF01

AddtlInf: Invalid value of Batch Booking, it should be "true" or "false"
