

Credit Suisse
Swiss Pension Fund Index
3rd Quarter 2011

Return in 3rd Quarter 2011: -2.66%

YTD: -3.04%

- Return Far Below BVG Target
- Falling Equity Component
- Swiss Franc at a Steady High

Index versus Mandatory Minimum Rate of Return since January 2000

The Credit Suisse Swiss Pension Fund Index is calculated on the basis of the stated performance of the Swiss pension funds whose assets are held by Credit Suisse under a global custody arrangement. Asset management

and advisory tasks, however, are performed by the pension funds themselves or by third parties. In its role as global custodian, Credit Suisse does not have any influence over the performance of the individual pension funds.

Autumn Sadness

The Credit Suisse Swiss Pension Fund Index (blue line in chart 1a), which started with a value of 100 at the beginning of 2000, is seeing a gloomy autumn. In the reporting quarter, the index fell by 3.32 points, or 2.66%, to 121.52 points as of September 30. Both July (–1.83%) and August (–1.09%) contributed to the negative result, while September posted a plus of 0.25%. The BVG mandatory minimum rate of return (the gray line in

chart 1a, which also started with a baseline of 100 as of January 2000), improved by another 0.5% or 0.68 points in the reporting quarter, climbing to 138.76 and increasing the difference to 17.24 points as of September 30. The annualized return of the Credit Suisse Swiss Pension Fund Index (table 1d) was 1.67% at the end of the quarter, compared to the annualized BVG mandatory minimum rate of return, which was 2.83%.

Risk / Return Positions

Our risk/return overview shows the rolling five-year and two-year lines. It should be noted that only portfolios that were part of the index for the entire observation period are taken into account. For example, portfolios formed on June 1, 2008, are

not taken into account in the five-year rolling observation period (1.10.2006–30.9.2011), but they do form part of the rolling two-year observation period.

Negative Trend of Five-Year Line

The presentation of the rolling five-year view on the cut-off date of the annualized risk-return positions of the individual pension funds (see chart 2a) has hardly changed since the last index publication. As at September 30, 2011, the regressive curve is negative, showing that one of the premises of modern portfolio theory, which states that higher (systematic, i.e. market-driven) risk is offset by higher returns, may not prove true, depending on the timing of entry seen over a period of several years.

Compared to the previous quarter, the unweighted average annualized return has fallen to 0.08% while the unweighted average annualized risk (red triangle) rose to 5.71%. Three pension funds are in the low-risk investment area (annualized risk of 3 to 4%) on September 30, 2011, while three pension funds now fall into the high-risk area (annualized risk of more than 8%). In the past quarter, more than one-third of the pension funds included in the Pension Fund Index could not report a positive annualized five-year return.

Database: Monthly results from October 2006 to September 2011

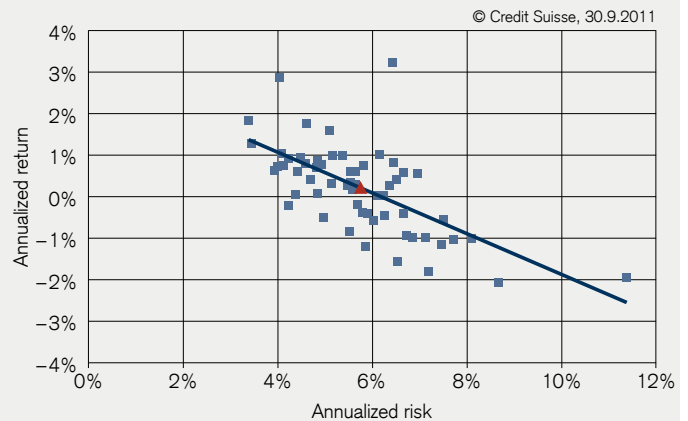

Table 2a

Key Figures

1.10.2006–30.9.2011

| | Risk | Return | Sharpe ratio |
|--|-------|--------|--------------|
| Credit Suisse Swiss Pension Fund Index | 5.71% | 0.08% | -0.17 |
| Pension funds >CHF 1 bn | 4.97% | -0.04% | -0.15 |
| Pension funds CHF 500 mn–1 bn | 5.51% | 0.71% | -0.05 |
| Pension funds CHF 150–500 mn | 5.52% | 0.14% | -0.16 |
| Pension funds <CHF 150 mn | 5.95% | -0.05% | -0.20 |

Table 2b

Return Bandwidths

1.10.2006–30.9.2011

| | Minimum | 1st quartile | Median | 3rd quartile | Maximum |
|--|---------|--------------|--------|--------------|---------|
| Credit Suisse Swiss Pension Fund Index | -2.07% | -0.46% | 0.34% | 0.82% | 3.30% |
| Pension funds >CHF 1 bn | -1.56% | 0.67% | 0.80% | 0.92% | 1.06% |
| Pension funds CHF 500 mn–1 bn | -1.78% | -0.38% | 1.01% | 1.04% | 3.30% |
| Pension funds CHF 150–500 mn | -1.01% | 0.04% | 0.27% | 0.63% | 1.79% |
| Pension funds <CHF 150 mn | -2.07% | -0.79% | 0.21% | 0.62% | 1.88% |

Negative Trend for Two-Year Line

The rolling two-year line (chart 2b, 1.10.2009–30.9.2011), which has a much stronger reaction to changes, also contradicts the theory that higher risk is rewarded by higher returns in the long term. This statement must be treated with caution, however,

as this is a rolling presentation of the past 24 months. The un-weighted average annualized return is 0.79%, while the un-weighted average risk is 3.99% (red triangle).

| Pension funds < CHF 150 mn | -3.00% | -0.23% | 0.68% | 1.30% | 4.07% |

Asset Allocation

Diminishing Equity Component

The asset allocation overview shows that the weighting of liquid funds dropped (-0.50%). Swiss and foreign equity exposure has also decreased (-1.1% and -1.2%, respectively) and total equity exposure is 26.7%. Commitments in Swiss franc bonds

(+0.8%) and foreign currency bonds (+0.6%) increased to a total bond exposure of 36.7%. Real estate commitments also increased by 0.9% to 21.4%.

Chart 3: Asset Allocation for the Last Eight Quarters

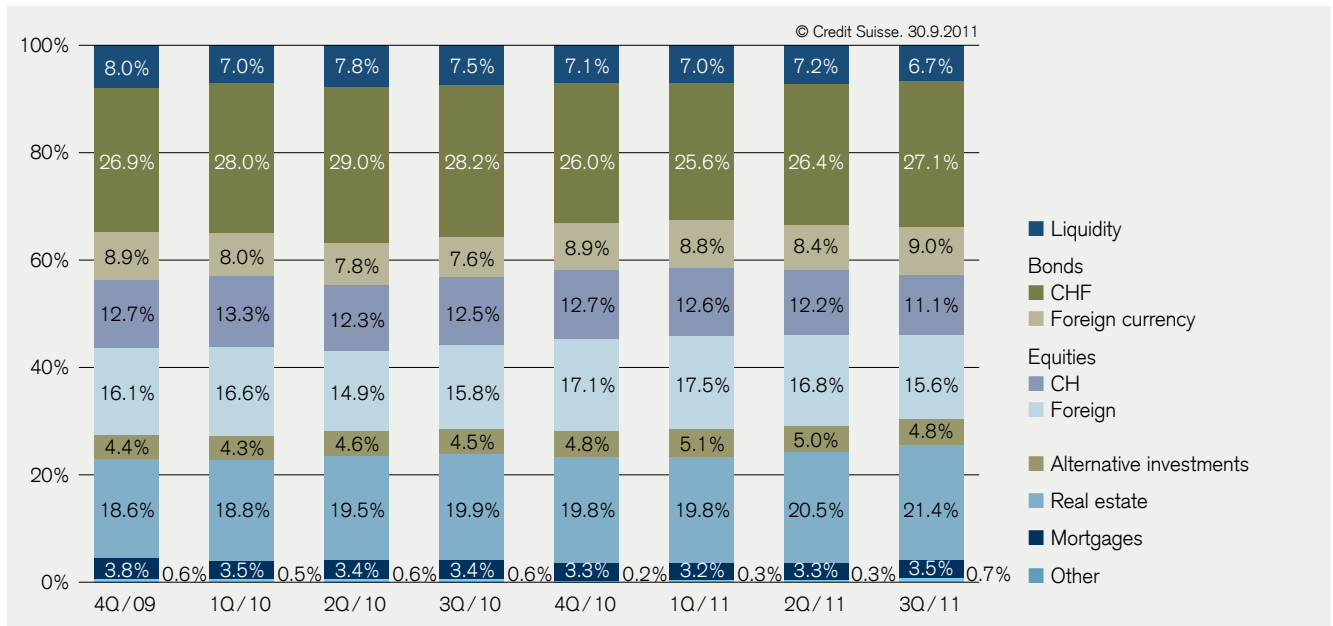

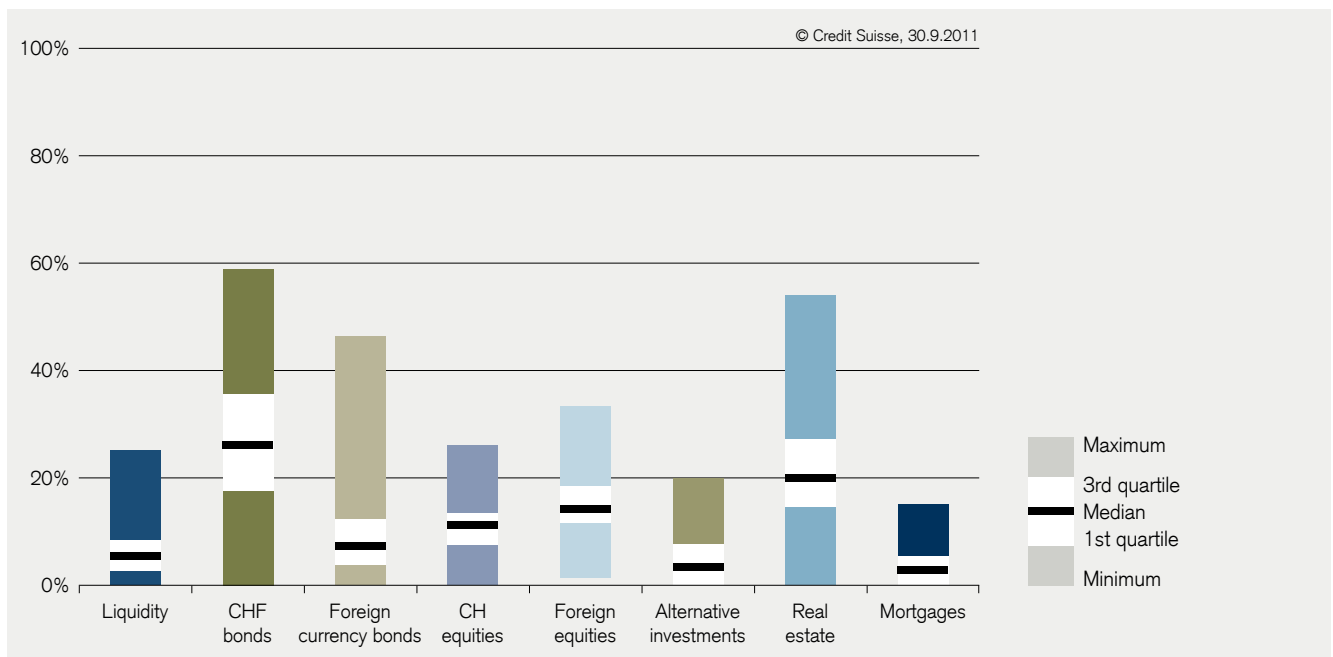

Chart 4: Minimum and Maximum Values 3rd Quarter 2011

Currency Allocation

Swiss Franc at a Steady High

The currency allocation shows that the foreign currency exposure versus the Swiss franc is slightly lower than in the previous quarter (-0.2%).

Important Information

The Credit Suisse Swiss Pension Fund Index is calculated on the basis of the stated performance of the Swiss pension funds whose assets are held by Credit Suisse under a global custody arrangement. Asset management and advisory tasks, however, are performed by the pension funds themselves or by third parties. In its role as global custodian, Credit Suisse does not have any influence over the performance of the individual pension funds. As a leading provider of global custodian services, Credit Suisse is able to prepare broadly-based and representative analyses of the Swiss pension fund business. At system level the data provides a very up-to-date picture of the current investment activities pertaining to second pillar assets, as the autonomous pension funds manage around 80% of all such assets.

When interpreting these figures, it must be kept in mind that the Credit Suisse Swiss Pension Fund Index is not an artificially constructed performance index but an index based on actual pension fund data. Consequently, the index is "alive," which significantly increases its informative value regarding the current investment behavior of Swiss pension funds. On the other hand, the fact that it is constantly revised limits the comparability of data over time. The index is nevertheless an up-to-date indicator, especially as highly accurate pension fund data remains difficult to obtain.
