

Market Update – PIIGS Exposure Levels in Swiss and Lux Funds

World equity markets are up by around 20% y-t-d in USD terms, with many developed markets at record highs. However, as we approach the end of the year, the unclear political situation surrounding the government shutdown and the debt-ceiling standoff in the US shows that politics in developed democracies remains a reliable source of uncertainty and a drag on economic growth. While financial markets acknowledged the raising of the US debt ceiling with a sigh of relief, the US debt cap has now been raised or redefined 78 times since 1960. Importantly, this latest raising has not solved the US's fiscal problem because we will be facing another debt-ceiling confrontation on 7 February 2014. Markets are now pricing in a renewed Fed attempt at tapering not before summer 2014. However, given the overall progress being made by the US economy, we anticipate that Fed action may come earlier.

Against this back drop, and on demand from various clients, we would like to take this opportunity to provide an update on exposure levels of Credit Suisse funds to Portugal, Ireland, Italy, Greece and Spain.

Credit Suisse Fund Exposure in % NAV as at 15.10.2013
